(54) Title: **MITOCHONDRIAL BIOLOGY EXPRESSION ARRAYS**

(57) Abstract: This invention provides a library of genes involved in mitochondrial biology, arrays containing probes for genes involved in mitochondrial biology, methods for making such arrays, and methods of using such arrays. Genes and probe sequences involved in mitochondrial biology in humans and mice are provided. The arrays of this invention are useful for determining mitochondrial biology gene expression profiles. Mitochondrial biology gene expression profiles are useful for determining expression profiles diagnostic of physiological conditions; diagnosing physiological conditions; identifying biochemical pathways, genes, and mutations involved in physiological conditions; identifying therapeutic agents useful for preventing and/or treating such physiological conditions; evaluating and/or monitoring the efficacy of such therapies, and creating and identifying animal models of human physiologic conditions. Arrays containing probes for all genes known to be involved in mitochondrial biology are provided, as well as arrays containing subsets of such probes.

MITOCHONDRIAL BIOLOGY EXPRESSION ARRAYS

CROSS-REFERENCE TO RELATED APPLICATIONS

This application claims priority to U.S. Patent Application Serial No. 60/316,323 filed August 30, 2001, and to Canadian Patent Application Serial No. 2,356,540 filed August 31, 2001, both of which is hereby incorporated in their entirety by reference to the extent not inconsistent with the disclosure herein.

BACKGROUND OF THE INVENTION

Mitochondrial disorders are a complex and polygenic group of conditions with the patient's symptoms varying due to differences in energetic threshold effect of various tissues and the stochastic nature of mtDNA segregation. Consequently, most mitochondrial disorders are best classified by their genetic cause rather than a biochemical or phenotypic profile (Shoffner, J. M., and Wallace, D. C., (1995) "Oxidative phosphorylation diseases," In The Metabolic and Molecular Basis of Inherited Disease, C. R. Scriver, A. L. Beaudet, W. S. Sly and D. Valle, eds. (New York: McGraw-Hill), pp.1535-1609; Wallace, D. C., (1999) "Mitochondrial diseases in man and mouse" *Science* 283:1482-1488). Many mitochondrial diseases result from mutations in nuclear genes and a subset of these are known to act by destabilizing the mitochondrial genome. (Graham, B. et al., "A mouse model for mitochondrial myopathy and cardiomyopathy resulting from a deficiency in the heart/skeletal muscle isoform of the adenine nucleotide translocator," [1997] *Nature Genetics* 16:226-234; Shoffner, J. M., and Wallace, D.C., "Oxidative phosphorylation diseases. Disorders of two genomes," [1990] *Advances in Human Genetics* 19:267-330; Zhu, Z. et al., "SURF1, encoding a factor involved in the biogenesis of cytochrome c oxidase, is mutated in Leigh's syndrome" [1998] *Nature Genetics* 20:337-43).

The analysis of mitochondrial function in cultured cells using somatic cell genetics has been instrumental in the characterization of human mitochondrial disorders. Ethidium bromide and R-6G treatment have been used to create p0 and mitochondria-less cell lines to analyze the maternal inheritance and biochemical phenotypes of many human mtDNA mutations (Chomyn, A. et al., "In vitro genetic transfer of protein synthesis and respiration defects to mitochondrial DNA-less cells with myopathy-patient mitochondria," [1991] *Molecular and Cellular Biology* 11:2236-2244; Jun, A.S. et al., "Use of transmitochondrial cybrids to assign a complex I defect to the mitochondrial DNA-encoded NADH

dehydrogenase subunit 6 gene mutation at nucleotide pair 14459 that causes Leber hereditary optic neuropathy and dystonia," [1996] *Molecular and Cellular Biology* 16:771-777; King, M. P. et al., "Defects in mitochondrial protein synthesis and respiratory chain activity segregate with the tRNA Leu(UUR) mutation associated with mitochondrial myopathy, encephalopathy, lactic acidosis, and stroke-like episodes," [1992] *Molecular and Cellular Biology* 12:480-490; Trounce, I. et al., "Cytoplasmic transfer of the mtDNA nt 8993 TG [ATP6] point mutation associated with Leigh's syndrome into mtDNA-less cells demonstrates cosegregation with a decrease in state III respiration and ADP/O ratio," [1994] *Proc. Natl. Acad. Sci. U.S.A.* 91:8334-8338). The creation of cybrid cell lines with identical nuclear backgrounds but different mtDNA genotypes allows the comparison of one mtDNA mutant to another without the potential interference of nuclear genome polymorphisms. These cybrid lines have generally been analyzed using biochemical techniques such as assaying cellular respiration or respiratory complex specific activities by enzymology. Some gene expression studies have been performed, but they have generally been done on single or small groups of genes (Heddi, A. et al., "Mitochondrial DNA expression in mitochondrial myopathies and coordinated expression of nuclear genes involved in ATP," [1993] *J. Biological Chemistry* 268:12156-12163; Heddi, A. et al., "Coordinate induction of energy gene expression in tissues of mitochondrial disease patients" [1999] *J Biol Chem* 274:22968-76).

Gene expression has been extensively studied. Although the regulation of mRNA abundance by changes in transcription or RNA degradation is by no means the only mechanism that regulates protein levels in a cell, virtually all differences in cell type or state can be correlated to changes in the mRNA abundance of several genes (Alizadeh, A.A. et al., "Distinct types of diffuse large B-cell lymphoma identified by gene expression profiling," [2000] *Nature* 403:503-11; DeRisi, J.L. et al., "Exploring the metabolic and genetic control of gene expression on a genomic scale," [1997] *Science* 278:680-686; Schena, M. et al., "Quantitative monitoring of gene expression patterns with a complementary DNA microarray" [1995] *Science* 270:467-70; Schena, M. et al., "Parallel human genome analysis: microarray-based expression monitoring of 1000 genes" [1996] *Proc Natl Acad Sci USA* 93:10614-9; Wallace D.C., grant abstract #2R01N502328-18; Kerstann, K.W. [2000] *American Society for Human Genetics* Abstract #1484; Kokoszka, J.E. [2000] *American Society of Human Genetics* Abstract #1618; Levy, S.E. [2001] *American Society of Human Genetics* Abstract #1501; Levy, S.E. [2000] "Genetic Alteration of the Mouse Mitochondrial

Genome and Effects on Gene Expression,” Ph.D. Thesis, Emory University; Coskun, P.E. [2000] *American Society of Human Genetics* Abstract #1616; Sligh, J.E. [2000] *American Society for Human Genetics* Abstract #53; Murdock, D.G. [2000] *American Society for Human Genetics* Abstract #55; Levy S.E. [2000] *Keystone Symposia* Abstract 119; Wallace, D.C., Ellison Medical Foundation, Senior Scholar Award in Aging).

DNA microarray analysis has been used to study diffuse large B-cell lymphoma (DLBCL) where microarrays were used to expand the diagnosis of DLBCL (Alizadeh, A.A. et al., “Distinct types of diffuse large B-cell lymphoma identified by gene expression profiling,” [2000] *Nature* 403:503-11). While standard histological and morphological techniques had defined subsets of DLBCL, array analysis revealed two clinically distinct classes. These two newly discovered classes were indistinguishable by standard pathology, but expression analysis showed a differential expression of hundreds of genes. Correlation of these molecular differences with differences in the progression of the disease and clinical outcome has revealed that these two classes of DLBCL could be considered separate diseases (Alizadeh, A.A. et al., “Distinct types of diffuse large B-cell lymphoma identified by gene expression profiling,” [2000] *Nature* 403:503-11).

Mitochondrial DNA sequences have been associated with pathologies as described in U.S. patent numbers 5,670,320, 5,296,349, 5,185,244, and 5,494,794. Publications on the subject of mitochondrial biology include: Scheffler I.E. (1999) Mitochondria, Wiley-Liss, NY; Lestienne, P., Ed. (1999) Mitochondrial Diseases: Models and Methods, Springer-Verlag, Berlin; Methods in Enzymology (2000) 322:Section V Mitochondria and Apoptosis, Academic Press, CA; Mitochondria and Cell Death (1999) Princeton University Press, NJ; Papa S, Ferruccio G, and Tager J Eds. (1999) Frontiers of Cellular Bioenergetics: Molecular Biology, Biochemistry, and Physiopathology, Kluwer Academic / Plenum Publishers, NY; Lemasters J and Nieminen A (2001) Mitochondria in Pathogenesis, Kluwer Academic / Plenum Publishers, NY; MITOMAP, <http://www.gen.emory.edu/cgi-gin/MITOMAP>; Wallace D.C. (2001) “A mitochondrial paradigm for degenerative diseases and aging,” *Novartis Foundation Symposium* 235:247-266; Wallace DC “Mitochondrial DNA in Aging and Disease” (August 1997) *Scientific American* 277:40-47; Wallace D.C. et al., “Mitochondrial biology, degenerative diseases and aging,” (1998) *BioFactors* 7:187-190; Heddi, A. et al., “Coordinate Induction of Energy Gene Expression in Tissues of Mitochondrial Disease Patients” (1999) *JBC* 274:22968-22976; Wallace, D.C.

"Mitochondrial Diseases in Man and Mouse," (1999) *Science* 283:1482-1488; Saraste, M. "Oxidative Phosphorylation at the *fin de siecle*" (1999) *Science* 283:1488-1493; Kokoszka et al., "Increased mitochondrial oxidative stress in the Sod2 (+/-) mouse results in the age-related decline of mitochondrial function culminating in increased apoptosis," (2001) *PNAS* 98:2278-2283; Wallace, D.C. (2001) *Mental Retardation and Developmental Disabilities* 7:158-166; Wallace D.C. (2001) *Am. J. Med. Gen.* 106:71-93; and Wallace, D.C. (2001) *EuroMit 5 Abstract*.

The analysis of mitochondrial disorders has traditionally consisted of molecular and biochemical descriptions of the defect (Shoffner, J. M., and Wallace, D. C., (1995) "Oxidative phosphorylation diseases," In The Metabolic and Molecular Basis of Inherited Disease, C. R. Scriver, A. L. Beaudet, W. S. Sly and D. Valle, eds. (New York: McGraw-Hill), pp.1535-1609). Only a limited number of analyses of changes in oxidative phosphorylation (OXPHOS) genes expression have been performed in humans harboring mtDNA mutations (Heddi, A. et al., "Coordinate Induction of Energy Gene Expression in Tissues of Mitochondrial Disease Patients" (1999) *JBC* 274:22968-22976). The advent of mouse models for mitochondrial disease created by the inactivation of nuclear-encoded OXPHOS subunits has provided experimental material to study tissue-specific expression changes. (Murdock, D.G. et al., "Up-regulation of nuclear and mitochondrial genes in the skeletal muscle of mice lacking the heart/muscle isoform of the adenine nucleotide translocator," [1999] *J. Biol. Chem.* 274:14429-33.)

Nucleic acid arrays have been described, e.g., in patent nos. U.S. 5,837,832, U.S. 5,807,522, U.S. 6,007,987, U.S. 6,110,426, WO 99/05324, 99/05591, WO 00/58516, WO 95/11995, WO 95/35505A1, WO 99/42813, JP10503841T2, GR3030430T3, ES2134481T3, EP804731B1, DE69509925C0, CA2192095AA, AU2862995A1, AU709276B2, AT180570, EP 1066506, and AU 2780499. Such arrays can be incorporated into computerized methods for analyzing hybridization results when the arrays are contacted with prepared sample nucleotides, e.g., as described in PCT Publication WO 99/05574, and U.S. Patents 5,754,524; 6,228,575; 5,593,839; and 5,856,101. Methods for screening for disease markers are also known to the art, e.g., as described in U.S. Patents 6,228,586; 6,160,104; 6,083,698; 6,268,398; 6,228,578; and 6,265,174.

All references cited herein are incorporated by reference in their entirety to the extent that they are not inconsistent with the disclosure herein. Citation of the above documents is not an admission that any of them are pertinent prior art.

SUMMARY OF THE INVENTION

This invention provides a library of genes involved in mitochondrial biology, arrays containing probes for genes involved in mitochondrial biology, methods for making such arrays, and methods of using such arrays. Genes and probe sequences involved in mitochondrial biology in humans and mice are provided. The arrays of this invention are useful for determining mitochondrial biology gene expression profiles. Mitochondrial biology gene expression profiles are useful for determining expression profiles diagnostic of energy metabolism-related physiological conditions; diagnosing such physiological conditions; identifying biochemical pathways, genes, and mutations involved in such physiological conditions; identifying therapeutic agents useful for preventing and/or treating such physiological conditions; evaluating and/or monitoring the efficacy of such therapies; and creating and identifying animal models of human energy metabolism-related physiological conditions. Arrays containing probes for all genes known to be involved in mitochondrial biology are provided, as well as arrays containing subsets of such probes. The mitochondrial biology expression arrays of this invention contain probes of genes not previously recognized to participate in mitochondrial biology.

BRIEF DESCRIPTION OF THE DRAWINGS

FIG. 1 is a diagram of the mammalian mitochondrion showing mitochondrial energetics, and the relationship between energy production, reactive oxygen species (ROS) generation, and regulation of apoptosis.

FIG. 2 is a depiction of a hybridized mouse array of this invention. The picture of the hybridized array shows the image generated when the two channels representing the control or reference and experimental targets are overlaid. When viewed in color, the spots appear various shades of red, green and yellow. Red spots indicate a predominance of hybridization to control cDNAs, while green spots indicate the predominance of hybridization to the experimental target sample. Yellow spots indicate an equal hybridization of both samples. Spots that are yellow-green or orange when the array is shown in color are depicted as half yellow and green, or half red and yellow, respectively.

FIG. 3 shows the p0 LMEB4 cell line gene expression scatter plot. The scatter plot shows the distribution of gene expression ratio for the p0 LMEB4 sample. The diagonal dotted line indicates a ratio of 1 between the two samples. Any spot above the dotted line is up-regulated or more abundant in the p0 LMEB4 experimental sample compared to the LM(TK) - control. Any spot below the dotted line is down-regulated or less abundant in the experimental sample compared to the control.

FIG. 4 shows NZB heart gene expression scatter plot. The scatter plot shows the distribution of gene expression ratio for the NZB heart tissue sample. The diagonal dotted line indicates a ratio of 1 between the two samples. Any spot above the dotted line is up-regulated or more abundant in the NZB-mtDNA heart experimental sample compared to the "common" mtDNA control heart. Any spot below the dotted line is down-regulated or less abundant in the experimental sample compared to the control.

DETAILED DESCRIPTION OF THE INVENTION

An approach to examining the complex interaction between nuclear and cytoplasmic mitochondrial genes is through the use of arrays such as DNA arrays. DNA microarrays provide a means to profile the expression patterns of up to thousands of genes simultaneously, and knowing where and when a gene is expressed often provides insight into its biological function. The pattern of gene expression in a particular tissue or cell type can also provide detailed information about its state or condition.

Currently, DNA microarrays are the most efficient method to monitor correlative changes in gene expression and to investigate complex traits on a molecular level. Expression profiles assembled from multiple interrelated experiments are used to determine hierarchical connections between gene expression patterns underlying complex biological traits. These patterns are used to further define the molecular basis of complex disorders.

The mitochondrion is assembled from approximately 1000 protein-coding nuclear DNA (nDNA) and mitochondrial DNA (mtDNA) genes. Thirteen protein-coding mitochondrial genes are known, as shown in Table 1. The codon usage table of the mtDNA is known. It differs slightly from the universal code. For example, UGA codes for

tryptophan instead of termination, AUA codes for methionine instead of isoleucine, and AGA and AGG are terminators instead of coding for arginine.

Table 1

Gene	Map Locus ^a	Abbreviation	Location ^b
NADH dehydrogenase 1	MTND1	ND1	3307-4262
NADH dehydrogenase 2	MTND2	ND2	4470-5511
NADH dehydrogenase 3	MTND3	ND3	10059-10404
NADH dehydrogenase 4L	MTND4L	ND4L	10470-10766
NADH dehydrogenase 4	MTND4	ND4	10760-12137
NADH dehydrogenase 5	MTND5	ND5	12337-14148
NADH dehydrogenase 6	MTND6	ND6	14149-14673
Cytochrome b	MTCYB	Cytb	14747-15887
Cytochrome c oxidase I	MTCO1	COI	5904-7445
Cytochrome c oxidase II	MTCO2	COII	7586-8269
Cytochrome c oxidase III	MTCO3	COIII	9207-9990
ATP synthase 6	MTATP6	ATP6	8527-9207
ATP synthase 8	MTATP8	ATP8	8366-8572

^{a,b} As defined on MitoMap, <http://www.gen.emory.edu/cgi-bin/MITOMAP>, which is numbered relative to the Cambridge Sequence (Genbank accession no. J01415 and Andrews et al. (1999), A Reanalysis and Revision of the Cambridge Reference Sequence for Human Mitochondrial DNA, *Nature Genetics* 23:147.

As used herein “gene” refers to a unigene cluster, an expressed sequence, or a sequence that is transcribed and translated into a protein. Another word used in the art for “gene” is “locus.” The National Institutes of Health (NIH) have instituted the term “unigene cluster” to refer to non-redundant sets of gene clusters. A stretch of DNA may be transcribed into several splice variants that share sequences, and these would be designated as belonging to one unigene cluster. As used herein “splice variant” refers to one version of several transcripts that are transcribed from one gene. As used herein “housekeeping gene” refers to a gene that is expressed at a similar level in almost all cell types.

As used herein “genes involved in mitochondrial biology” refers to mitochondrial genes and nuclear genes involved in cellular structures and functions such as intermediary metabolism, OXPHOS, mitochondrial transport, cellular bioenergetics, cellular biogenesis,

cell cycle control, DNA replication, energy, metabolism, heat shock, stress, cellular matrix, cellular structural proteins, protein synthesis and translational control, signal transduction, transcription and transcriptional regulation, chromatin structure, reactive oxygen species (ROS) biology, and apoptosis.

“mtDNA” means mitochondrial DNA. “nDNA” means nuclear DNA.

As used herein “mitochondrial biology expression profile” refers to the expression patterns of genes involved in mitochondrial biology, such as is detected by probes derived from those genes, in a sample. The profile can be said to be of the sample or of the source from which the sample is derived. A profile may be measured independently, but a profile may also be measured relative to a standard or control or other sample. A complete mitochondrial biology expression profile includes data on all genes known to be involved in mitochondrial biology for the species from which the sample is derived. The mitochondrial biology expression profile for a selected physiological condition is at least the expression pattern of genes determined to have altered expression diagnostic of that physiological condition, but the expression pattern of additional genes involved in mitochondrial biology may also be included.

As used herein “array” refers to an ordered set of isolated nucleic acid molecules or spots consisting of pluralities of substantially identical isolated nucleic acid molecules. Preferably the molecules are attached to a substrate. The spots or molecules are ordered so that the location of each (on the substrate) is known and the identity of each is known. Arrays on a micro scale can be called microarrays. Microarrays on solid substrates, such as glass or other ceramic slides, can be called gene chips or chips.

As used herein, an “isolated nucleic acid” is a nucleic acid outside of the context in which it is found in nature. An isolated nucleic acid is a nucleic acid the structure of which is not identical to that of any naturally occurring nucleic acid molecule. The term covers, for example: (a) a DNA which has the sequence of part of a naturally-occurring genomic DNA molecule but is not flanked by both of the coding or noncoding sequences that flank that part of the molecule in the genome of the organism in which it naturally occurs; (b) a nucleic acid incorporated into a vector or into the genomic DNA of a prokaryote or eukaryote in a manner such that the resulting molecule is not identical to any naturally-occurring vector or genomic

DNA; (c) a separate molecule such as a cDNA, a genomic fragment, a fragment produced by polymerase chain reaction (PCR), or a restriction fragment; and (d) a recombinant nucleotide sequence that is part of a hybrid gene, i.e., a gene encoding a fusion protein, or a modified gene having a sequence not found in nature.

As used herein “probe” refers to an isolated nucleic acid that is suitable for hybridizing to other nucleic acids when placed on a solid substrate. Probes for arrays can be as short as 20-30 nucleotides and up to as long as several thousand nucleotides. Probes can be single-stranded or double stranded. A probe usually comprises at least a partially known sequence that is used to investigate or interrogate the presence, absence, and/or amount of a complementing sequence. On the arrays of this invention, a probe is of such a sequence and the hybridization conditions of such stringency that each probe hybridizes substantially to only one type of nucleic acid per target sample.

As used herein, “target” or “target sample” refers to the collection of nucleic acids, e.g., reverse transcribed and labeled cDNA used as a prepared sample for array analysis. The target is interrogated by the probes of the array. A “target” or “target sample” may be a mixture of several prepared samples that are combined. For example, an experimental target sample may be combined with a differently labeled control sample and hybridized to an array, the combined samples being referred to as the “target” interrogated by the probes of the array. As used herein, “interrogated” means tested. Probes, targets, and hybridization conditions are chosen such that the probes are capable of interrogating the target, i.e., of hybridizing to complementary sequences in the target sample.

As used herein “physiological condition” refers to a healthy or unhealthy physiological state. As used herein “optimize an array for diagnosis” refers to selecting probes for an array such that only probes from genes necessary for diagnosis of one or more physiological conditions are included.

As used herein “printing” refers to the process of applying probes to a solid substrate, e.g., or applying arrays of probes to a solid substrate to make a gene chip. As used herein “glass slide” refers to a small piece of glass of the same dimensions as a standard microscope slide. As used herein, “prepared substrate” refers to a substrate that is prepared with a

substance capable of serving as an attachment medium for attaching the probes to the substrate, such as poly Lysine.

As used herein “selective hybridization” refers to hybridization at moderate to high stringency such that only sequences of an appropriate homology can remain bound. Selective hybridization is hybridization performed at stringency conditions such that probes only hybridize to target sample nucleic acids that they are intended to hybridize with. Depending on the sequences of the probes and the target, the hybridization conditions are chosen to be appropriately selective. For example, if human sequences are used as probes for interrogating a human sample, selective hybridization could be at high stringency because, allowing for neutral polymorphism in humans, the sequences would be about 99-100% identical. When applying a chimpanzee target prepared sample to an array containing human sequence probes, selective hybridization would be at a lower stringency. Since hybridizing a target to an array is performed at one chosen hybridization stringency, probes are chosen so that they can undergo selective hybridization with the appropriate target molecules at the same hybridization stringency. As used herein “homology” refers to nucleotide sequence identity to a sequence, a molecule, or its complement.

As used herein “mouse sample” refers to a sample derived from a mouse or a cell line derived from a mouse. Similarly, as used herein, “human sample” refers to a sample derived from a human or a cell line derived from a human. Samples preferably contain total RNA or messenger RNA (mRNA). As used herein “total RNA” refers to a combination of several types of RNA, including mRNA, from a cell or a group of cell. As used herein, “mRNA” refers to messenger RNA or RNA that has a 3' poly A tail. As used herein, a “prepared sample” or a “target” refers to a sample that has been labeled in preparation for array hybridization. A “prepared sample” or “target” is reverse transcribed and fluorescently labeled. As used herein “standard” refers to a sample or a dataset that is commonly used for comparison to unknown samples so that the unknown samples or datasets can be standardized for comparison to each other. As used herein, “control sample” and “reference sample” refer to samples that are used for comparison against an experimental sample.

As used herein, “clone” refers to an isolated nucleic acid molecule that may be stored in an organism such as *E. coli*. A clone is usually made of a vector and an insert. The insert usually contains a sequence of interest.

For mitochondrial diseases, the accuracy of current biochemical and phenotypic techniques has proven quite limited in distinguishing and diagnosing the various disorders. Recent technical and analytical advancements make it practical to analyze and quantitate the expression patterns of thousands of genes at once using arrays such as DNA microarrays. This invention applies these array techniques to the study of mitochondrial gene expression, in the design of specialized microarrays containing genes involved in mitochondrial biology. The arrays of this invention contain probes for genes not previously recognized to participate in mitochondrial biology.

Genes, or expressed sequences, involved in mitochondrial biology are involved in cellular structures and functions such as intermediary metabolism, OXPHOS, transport, cellular bioenergetics, cellular biogenesis, cell cycle control, DNA replication, energy, metabolism, heat shock, stress, cellular matrix, cellular structural proteins, protein synthesis and translational control, signal transduction, transcription and transcriptional regulation, chromatin structure, reactive oxygen species (ROS) biology and apoptosis. Alterations in mitochondrial functions are associated with a variety of physiological conditions including degenerative diseases. These functions are involved in many degenerative diseases. This invention provides a compilation of sequences involved in human and mouse mitochondrial biology.

The genes in the arrays of this invention were identified by a variety of techniques including searching databanks for sequences related to genes involved in processes similar to mitochondrial biology such as homologues of prokaryotic genes, and screening mitochondrial mutant cell lines and animal lines for genes having altered expression patterns. When a relevant gene was identified for one species, such as the mouse, the homologue for a second species, such as human, if known, was then included on the list of genes involved in mitochondrial biology for the second species. Mitochondrial mutant cell lines are cell lines that have at least one mutation in a gene involved in mitochondrial biology.

The microarrays or gene chips of this invention comprise probes placed in known positions on a solid substrate. A useful solid substrate is a specialized glass microscope slide. The arrays of this invention include arrays containing probes that detect some or all expressed sequences involved in mitochondrial biology in a selected species.

Arrays of this invention may contain control probes as well as probes for genes involved in mitochondrial biology. Controls that can be included on the arrays of this invention include hybridization controls and scanning controls. The controls can be positive or negative controls. One type of hybridization control is spotting the same probe for a gene involved in mitochondrial biology several times on one chip, each spot having different amounts of probe. This allows for the amount of probe of a given sequence to be optimized. Spotting too little probe may lead to a maximum hybridization signal resulting in a loss of data. Dimethyl sulfoxide (DMSO) can be used as a negative hybridization and scanning control. A spot of DMSO should give no signal. If there is any signal at a DMSO spot, the problem could be at hybridization or scanning steps. Plant sequences having sufficiently low homology with human and mouse sequences can be utilized as negative hybridization and scanning controls. Plant sequences should not give any signal. A signal at a plant spot could indicate a problem with hybridization, i.e. too low a hybridization stringency was used, or with scanning, i.e., the chip was inserted into the scanner at the incorrect orientation. Poly A can be used as a positive hybridization specificity/non specificity control. A poly A spot should always give intense hybridization. No signal at a poly A spot could be the result of use of too high a hybridization stringency. Cy3 or Cy5 incorporated into a PCR product can be a positive scanning control. A spot on an array of a PCR product, or any other nucleic acid, that includes fluorescent label, should always give a signal, and if this sequence has no homology with any other sequence in the target, there should only be a signal of the label included in the nucleic acid. Control probes and probes for genes involved in mitochondrial biology can be duplicated, triplicated, etc. on the chip as printing controls. Controls for arrays can be purchased from Stratagene (SpotReport™, La Jolla, CA, USA).

Standard targets and reference targets are also useful with the arrays of this invention, as is known in the art. When a prepared sample target to be interrogated is applied to an array of this invention, the results of the test are measured, i.e. by scanning, and recorded. These results can be compared directly to other test results using a similar array. However, it is much more accurate to include a differently labeled standard target in the hybridization mix with the prepared sample target. The results of the experimental sample target are then standardized, so that they can be compared accurately to the results of hybridizations of other sample targets. If ten different prepared sample targets are hybridized to arrays of this invention, simultaneously with the same prepared standard target, then the results of the ten

sample targets can be accurately compared to each other. A prepared reference or control target for comparison can also be particularly pertinent to the experiment being performed. A prepared reference target could be a target sample derived from the same cell type from an animal of the same sex, age, and nuclear background as the experimental target sample, except for one difference, such as a different phenotype or treatment. Comparing the results of the experimental target with the results of an appropriate reference target yields a profile associated with the one difference being tested. When the hybridization results of a first sample are compared to the hybridization results of a second sample, the comparison can occur while the hybridization results of the first sample are being measured and recorded, or afterwards, by comparing the measured and recorded hybridization results of the two samples.

Probes on an array may be as short as about 20-30 nucleotides long or as long as the entire gene or clone from which they are derived, which may be up to several kilobases. A probe sequence may be identical (have 100% homology) to the portion of the gene it hybridizes to or it may be a mutated sequence. Mutated probes have less than 100% homology, such as about 98% homology, about 95% homology, about 90% homology, about 80% homology, or about 75% homology, or less, with the portions of the genes to which they hybridize. Arrays are designed such that all probes on an array can hybridize to their corresponding genes at about the same hybridization stringency. Probes for arrays used for interrogating samples usually do not contain sequences such as repetitive sequences that would hybridize substantially with nucleic acids derived from more than one gene, i.e., transcripts or cDNAs. Probes for arrays should be unique at the hybridization stringencies used. Statistically, to be unique in the total human genome, probes should be at least about fifteen nucleotides long. A unique probe is only able to hybridize with one type of nucleic acid per target. A probe is not unique if at the hybridization stringency used, it hybridizes with nucleic acids derived from two different genes, i.e. related genes. The homology of the sequence of the probe to the gene and the hybridization stringency used help determine whether a probe is unique when testing a selected sample. Probes also may not hybridize with different nucleic acids derived from the same gene, i.e., splice variants. The location in the gene of the sequence used for the probe also helps determines whether a probe is unique when testing a selected sample. If the splice variants of a gene are known, ideally several different probes sequences are chosen from that gene for an array, such that each probe can only hybridize to nucleic acid derived from one of the splice variants. References for

sequences of probes useful for arrays of this invention are compiled in Tables 3-5 and in the sequence listings. Other equivalent probes derived from the gene sequences from which the Tables 3-5 probes are derived, are also useful for the arrays of this invention. Arrays of this invention are used at hybridization conditions allowing for selective hybridization. At conditions of selective hybridization, probes hybridize with nucleic acid from only one gene. When an array is simultaneously hybridized with two targets or two prepared samples, each probe may hybridize with a nucleic acid in each prepared sample or target. When these two nucleic acids are from the same unigene cluster, the probe is said to hybridize with one gene, despite the fact that these nucleic acids may contain different labels.

Sequences of genes involved in mitochondrial biology from other species can be used to make probes that are useful in the arrays of this invention as long as they hybridize at about the same hybridization stringency as other probes on an array. Sequences that are only able to hybridize at a substantially lower stringency, such as plant sequences, are useful as negative controls.

The arrays of this invention can be utilized to determine profiles for related species by modifying the hybridization stringency appropriately. Sequence homology between organisms is known in the art. For example, human and chimpanzee sequences are about 98% identical. Consequently, human arrays are useful for profiling chimpanzees, with an appropriate lowering of the hybridization stringency. Hybridization stringency can be lowered by modifying hybridization components such as salt concentrations and hybridization and/or wash temperatures, as is known in the art.

The sequences useful for the arrays of this invention are useful for designing arrays for other species as well. To create an array for a new organism, the known sequences from the new organism, including expressed sequence tags (ESTs), are compared, by methods known to the art, with the sequences known to already be useful for other mitochondrial biology arrays. Sequence comparisons may be performed at the nucleic acid or polypeptide level. Homologous and analogous sequences from the new organism are thereby identified and selected for the new organism's mitochondrial array. The probes on the arrays of this invention are also useful as probes for identifying candidates for the new organism's array using molecular biology techniques that are standard in the art such as screening libraries.

All sequences given herein are meant to encompass the complementary strand, as well as double-stranded polynucleotides comprising the given sequence.

Microarrays of this invention can contain as few as two probes to as many as all the probes diagnostic of the selected physiological condition to be tested. Microarrays of this invention may also contain probes for all genes involved in mitochondrial biology. The arrays of this invention may contain probes for at least about five genes, at least about ten genes, at least about twenty-five genes, at least about fifty genes, at least about 100 genes, at least about 500 genes, or at least about 1000 genes. The mouse array may contain probes for at least about 950 genes and the human array may contain probes for at least about 600 genes. Arrays of this invention may comprise more than about five spots, more than about ten spots, more than about twenty-five spots, more than about one hundred spots, more than about 500 spots, or more than about 1000 spots.

Using microarrays may require amplification of target sequences (generation of multiple copies of the same sequence) of sequences of interest, such as by PCR or reverse transcription. As the nucleic acid is copied, it is tagged with a fluorescent label that emits light like a light bulb. The labeled nucleic acid is introduced to the microarray and allowed to react for a period of time. This nucleic acid sticks to, or hybridizes, with the probes on the array when the probe is sufficiently complementary to the labeled, amplified, sample nucleic acid. The extra nucleic acid is washed off of the array, leaving behind only the nucleic acid that has bound to the probes. By obtaining an image of the array with a fluorescent scanner and using software to analyze the hybridized array image, it can be determined if, and to what extent, genes are switched on and off, or whether or not sequences are present, by comparing fluorescent intensities at specific locations on the array. The intensity of the signal indicates to what extent a sequence is present. In expression arrays, high fluorescent signals indicate that many copies of a gene are present in a sample, and lower fluorescent signal shows a gene is less active. By selecting appropriate hybridization conditions and probes, this technique is useful for detecting single nucleotide polymorphisms (SNPs) and for sequencing. Methods of designing and using microarrays are continuously being improved (Religio, A. et al. (2002) *Nuc. Acids. Res.* 30(11):e51; Iwasaki, H et al. (2002) *DNA Res.* 9(2):59-62; and Lindroos, K. et al. (2002) *Nuc. Acids. Res.* 30(14):E70).

Arrays of this invention may be made by any array synthesis methods known in the art such as spotting technology or solid phase synthesis. Preferably the arrays of this invention are synthesized by solid phase synthesis using a combination of photolithography and combinatorial chemistry. Some of the key elements of probe selection and array design are common to the production of all arrays. Strategies to optimize probe hybridization, for example, are invariably included in the process of probe selection. Hybridization under particular pH, salt, and temperature conditions can be optimized by taking into account melting temperatures and by using empirical rules that correlate with desired hybridization behaviors. Computer models may be used for predicting the intensity and concentration-dependence of probe hybridization.

Arrays, also called DNA microarrays or DNA chips, are fabricated by high-speed robotics, generally on glass but sometimes on nylon substrates, for which probes (Phimister, B. (1999) *Nature Genetics* 21s:1-60) with known identity are used to determine complementary binding. An experiment with a single DNA chip can provide researchers information on thousands of genes simultaneously. There are several steps in the design and implementation of a DNA array experiment. Many strategies have been investigated at each of these steps: 1) DNA types; 2) Chip fabrication; 3) Sample preparation; 4) Assay; 5) Readout; and 6) Software (informatics).

There are two major application forms for the array technology: 1) Determination of expression level (abundance) of genes; and 2) Identification of sequence (gene / gene mutation). There appear to be two variants of the array technology, in terms of intellectual property, of arrayed DNA sequence with known identity: Format I consists of probe cDNA (500~5,000 bases long) immobilized to a solid surface such as glass using robot spotting and exposed to a set of targets either separately or in a mixture. This method, "traditionally" called DNA microarray, is widely considered as having been developed at Stanford University. (R. Ekins and F.W. Chu "Microarrays: their origins and applications," [1999] *Trends in Biotechnology*, 17:217-218). Format II consists of an array of oligonucleotide (20~80-mer oligos) or peptide nucleic acid (PNA) probes synthesized either *in situ* (on-chip) or by conventional synthesis followed by on-chip immobilization. The array is exposed to labeled sample DNA, hybridized, and the identity/abundance of complementary sequences is determined. This method, "historically" called DNA chips, was developed at Affymetrix, Inc., which sells its photolithographically fabricated products under the GeneChip®

trademark. Many companies are manufacturing oligonucleotide-based chips using alternative *in-situ* synthesis or deposition technologies.

Probes on arrays can be hybridized with fluorescently-labeled target polynucleotides and the hybridized array can be scanned by means of scanning fluorescence microscopy. The fluorescence patterns are then analyzed by an algorithm that determines the extent of mismatch content, identifies polymorphisms, and provides some general sequencing information (M. Chee et al., [1996] *Science* 274:610). Selectivity is afforded in this system by low stringency washes to rinse away non-selectively adsorbed materials. Subsequent analysis of relative binding signals from array elements determines where base-pair mismatches may exist. This method then relies on conventional chemical methods to maximize stringency, and automated pattern recognition processing is used to discriminate between fully complementary and partially complementary binding.

Devices such as standard nucleic acid microarrays or gene chips, require data processing algorithms and the use of sample redundancy (i.e., many of the same types of array elements for statistically significant data interpretation and avoidance of anomalies) to provide semi-quantitative analysis of polymorphisms or levels of mismatch between the target sequence and sequences immobilized on the device surface. Such algorithms and software useful for statistical analysis are known to the art.

Using microarrays first requires amplification (generation of multiple copies of the same gene) of genes of interest, such as by reverse transcription. As the nucleic acid is copied, it is tagged with a fluorescent label that emits light like a light bulb. The labeled nucleic acid is introduced to the microarray and allowed to react for a period of time. This nucleic acid sticks to, or hybridizes, with the probes on the array when the probe is sufficiently complementary to the nucleic acid in the prepared sample. The extra nucleic acid is washed off of the array, leaving behind only the nucleic acid that has bound to the probes. By obtaining an image of the array with a fluorescent scanner and using software to analyze the hybridized array image, it can be determined if and to what extent genes are switched on and off, or whether or not sequences are present, by comparing fluorescent intensities at specific locations on the array. High fluorescent signals indicate that many copies of a gene are present in a prepared sample, and lower fluorescent signal shows a gene is less active. Expression levels for various genes under different conditions can be directly compared, such

as for a cancer cell and a normal cell. Similarly, it can be determined what genes are turned on and off in response to certain stimuli such as a drug. Such information is valuable because it identifies genes in disease pathways and also is predictive of either efficacy or toxicity of drugs.

Detecting a particular polymorphism can be accomplished using two probes. One probe is designed to be perfectly complementary to a target sequence, and a partner probe is generated that is identical except for a single base mismatch in its center. In the Affymetrix system, these probe pairs are called the Perfect Match probe (PM) and the Mismatch probe (MM). They allow for the quantitation and subtraction of signals caused by non-specific cross-hybridization. The difference in hybridization signals between the partners, as well as their intensity ratios, serve as indicators of specific target abundance, and consequently of the sequence.

Arrays can rely on multiple probes to interrogate individual nucleotides in a sequence. The identity of a target base can be deduced using four identical probes that vary only in the target position, each containing one of the four possible bases. Alternatively, the presence of a consensus sequence can be tested using one or two probes representing specific alleles. To genotype heterozygous or genetically mixed samples, arrays with many probes can be created to provide redundant information, resulting in unequivocal genotyping.

Probes fixed on solid substrates and targets (nucleotide sequences in the sample) are combined in a hybridization buffer solution and held at an appropriate temperature until annealing occurs. Thereafter, the substrate is washed free of extraneous materials, leaving the nucleic acids on the target bound to the fixed probe molecules allowing for detection and quantitation by methods known in the art such as by autoradiograph, liquid scintillation counting, and/or fluorescence. As improvements are made in hybridization and detection techniques, they can be readily applied by one of ordinary skill in the art. As is well known in the art, if the probe molecules and target molecules hybridize by forming a strong non-covalent bond between the two molecules, it can be reasonably assumed that the probe and target nucleic acid are essentially identical, or almost completely complementary if the annealing and washing steps are carried out under conditions of high stringency. The detectable label provides a means for determining whether hybridization has occurred.

When using oligonucleotides or polynucleotides as hybridization probes, the probes may be labeled. In arrays of this invention, the target may instead be labeled by means known to the art. Target may be labeled with radioactive or non-radioactive labels. Targets preferably contain fluorescent labels.

Various degrees of stringency of hybridization can be employed. The more stringent the conditions are, the greater the complementarity that is required for duplex formation. Stringency can be controlled by temperature, probe concentration, probe length, ionic strength, time, and the like. Hybridization experiments are often conducted under moderate to high stringency conditions by techniques well known in the art, as described, for example in Keller, G.H., and M.M. Manak (1987) *DNA Probes*, Stockton Press, New York, NY., pp. 169-170, hereby incorporated by reference. However, sequencing arrays typically use lower hybridization stringencies, as is known in the art.

Moderate to high stringency conditions for hybridization are known to the art. An example of high stringency conditions for a blot are hybridizing at 68° C in 5X SSC/5X Denhardt's solution/0.1% SDS, and washing in 0.2X SSC/0.1% SDS at room temperature. An example of conditions of moderate stringency are hybridizing at 68° C in 5X SSC/5X Denhardt's solution/0.1% SDS and washing at 42° C in 3X SSC. The parameters of temperature and salt concentration can be varied to achieve the desired level of sequence identity between probe and target nucleic acid. See, e.g., Sambrook et al. (1989) *vide infra* or Ausubel et al. (1995) Current Protocols in Molecular Biology, John Wiley & Sons, NY, NY, for further guidance on hybridization conditions.

The melting temperature is described by the following formula (Beltz, G.A. et al., [1983] Methods of Enzymology, R. Wu, L. Grossman and K. Moldave [Eds.] Academic Press, New York 100:266-285).

$$T_m = 81.50^\circ \text{C} + 16.6 \log[\text{Na}^+] + 0.41(+G+C) - 0.61(\% \text{formamide}) - 600/\text{length of duplex in base pairs}.$$

Washes can typically be carried out as follows: twice at room temperature for 15 minutes in 1X SSPE, 0.1% SDS (low stringency wash), and once at $T_m - 20^\circ \text{C}$ for 15 minutes in 0.2X SSPE, 0.1% SDS (moderate stringency wash).

Nucleic acid useful in this invention can be created by Polymerase Chain Reaction (PCR) amplification. PCR products can be confirmed by agarose gel electrophoresis. PCR is a repetitive, enzymatic, primed synthesis of a nucleic acid sequence. This procedure is well known and commonly used by those skilled in this art (see Mullis, U.S. Patent Nos. 4,683,195, 4,683,202, and 4,800,159; Saiki et al. [1985] *Science* 230:1350-1354). PCR is used to enzymatically amplify a DNA fragment of interest that is flanked by two oligonucleotide primers that hybridize to opposite strands of the target sequence. The primers are oriented with the 3' ends pointing towards each other. Repeated cycles of heat denaturation of the template, annealing of the primers to their complementary sequences, and extension of the annealed primers with a DNA polymerase result in the amplification of the segment defined by the 5' ends of the PCR primers. Since the extension product of each primer can serve as a template for the other primer, each cycle essentially doubles the amount of DNA template produced in the previous cycle. This results in the exponential accumulation of the specific target fragment, up to several million-fold in a few hours. By using a thermostable DNA polymerase such as the Taq polymerase, which is isolated from the thermophilic bacterium *Thermus aquaticus*, the amplification process can be completely automated. Other enzymes that can be used are known to those skilled in the art.

Polynucleotide sequences of the present invention can be truncated and/or mutated such that certain of the resulting fragments and/or mutants of the original full-length sequence can retain the desired characteristics of the full-length sequence. A wide variety of restriction enzymes that are suitable for generating fragments from larger nucleic acid molecules are well known. In addition, it is well known that Bal31 exonuclease can be conveniently used for time-controlled limited digestion of DNA. See, for example, Maniatis (1982) Molecular Cloning: A Laboratory Manual, Cold Spring Harbor Laboratory, New York, pages 135-139, incorporated herein by reference. See also Wei et al. (1983) *J. Biol. Chem.* 258:13006-13512. By use of Bal31 exonuclease (commonly referred to as "erase-a-base" procedures), the ordinarily skilled artisan can remove nucleotides from either or both ends of the subject nucleic acids to generate a wide spectrum of fragments that are functionally equivalent to the subject nucleotide sequences. One of ordinary skill in the art can, in this manner, generate hundreds of fragments of controlled, varying lengths from locations all along the original molecule. The ordinarily skilled artisan can routinely test or screen the generated fragments for their characteristics and determine the utility of the

fragments as taught herein. It is also well known that the mutant sequences can be easily produced with site-directed mutagenesis. See, for example, Larionov, O.A. and Nikiforov, V.G. (1982) *Genetika* 18(3):349-59; and Shortle, D. et al., (1981) *Annu. Rev. Genet.* 15:265-94, both incorporated herein by reference. The skilled artisan can routinely produce deletion-, insertion-, or substitution-type mutations and identify those resulting mutants that contain the desired characteristics of wild-type sequences, or fragments thereof.

Thus, mutational, insertional, and deletional variants of the disclosed nucleotide sequences can be readily prepared by methods which are well known to those skilled in the art. These variants can be used in the same manner as the exemplified primer sequences so long as the variants have substantial sequence homology with the original sequence. As used herein, substantial sequence homology refers to homology that is sufficient to enable the variant polynucleotide to function in the same capacity as the polynucleotide from which the probe was derived. Homology is greater than 80%, greater than 85%, greater than 90%, or greater than 95%. The degree of homology or identity needed for the variant to function in its intended capacity depends upon the intended use of the sequence. It is well within the skill of a person trained in this art to make mutational, insertional, and deletional mutations that are equivalent in function or are designed to improve the function of the sequence or otherwise provide a methodological advantage.

Percent sequence identity of two nucleic acids may be determined using the algorithm of Karlin and Altschul (1990) *Proc. Natl. Acad. Sci. USA* 87:2264-2268, modified as in Karlin and Altschul (1993) *Proc. Natl. Acad. Sci. USA* 90:5873-5877. Such an algorithm is incorporated into the NBLAST and XBLAST programs of Altschul et al. (1990) *J. Mol. Biol.* 215:402-410. BLAST nucleotide searches are performed with the NBLAST program, score = 100, wordlength = 12, to obtain nucleotide sequences with the desired percent sequence identity. To obtain gapped alignments for comparison purposes, Gapped BLAST is used as described in Altschul et al. (1997) *Nucl. Acids. Res.* 25:3389-3402. When utilizing BLAST and Gapped BLAST programs, the default parameters of the respective programs (NBLAST and XBLAST) are used. See <http://www.ncbi.nih.gov>.

Standard techniques for cloning, DNA isolation, amplification and purification, for enzymatic reactions involving DNA ligase, DNA polymerase, restriction endonucleases and the like, and various separation techniques useful herein are those known and commonly

employed by those skilled in the art. A number of standard techniques are described in Sambrook et al. (1989) *Molecular Cloning*, Second Edition, Cold Spring Harbor Laboratory, Plainview, New York; Maniatis et al. (1982) *Molecular Cloning*, Cold Spring Harbor Laboratory, Plainview, New York; Wu (ed.) (1993) *Meth. Enzymol.* 218, Part I; Wu (ed.) (1979) *Meth. Enzymol.* 68; Wu et al. (eds.) (1983) *Meth. Enzymol.* 100 and 101; Grossman and Moldave (eds.) *Meth. Enzymol.* 65; Miller (ed.) (1972) Experiments in Molecular Genetics, Cold Spring Harbor Laboratory, Cold Spring Harbor, New York; Old and Primrose (1981) Principles of Gene Manipulation, University of California Press, Berkeley; Schleif and Wensink (1982) Practical Methods in Molecular Biology; Glover (Ed.) (1985) DNA Cloning Vol. I and II, IRL Press, Oxford, UK; Hames and Higgins (Eds.) (1985) Nucleic Acid Hybridization, IRL Press, Oxford, UK; Setlow and Hollaender (1979) Genetic Engineering: Principles and Methods, Vols. 1-4, Plenum Press, New York; and Ausubel et al. (1992) Current Protocols in Molecular Biology, Greene/Wiley, New York, NY. Abbreviations and nomenclature, where employed, are deemed standard in the field and commonly used in professional journals such as those cited herein.

The arrays of this invention are useful for defining expression signatures or profiles for mitochondrial diseases, as well as distinguishing clinical disorders that result from OXPHOS dysfunction, oxidative stress, apoptosis, and aging. The microarrays of this invention are useful for providing profiles for whole classes of mitochondrial diseases that have common underlying pathophysiological mechanisms. The data obtained from using these arrays are useful in the identification of pathways involved in these diseases and in the design of efficient therapies for treating these diseases.

The arrays of this invention are useful for determining mitochondrial biology expression profiles and for sample evaluation using those profiles. The arrays of this invention are useful for diagnosis, for identifying pathways, genes, and mutations involved in physiological conditions, for creating animal models of human physiological conditions, and for designing curative and preventative therapies and evaluating their effectiveness.

The arrays of this invention are useful for determining mitochondrial biology expression profiles of organisms, such as humans, mice, and closely related species; tissues and organs of such organisms; cell types of such organisms; and cell lines derived from such organisms. An individual can be tested at any age, including as a fetus, neonate, infant, child,

adolescent, mature adult, senior, and deceased. Using standard targets, the arrays of this invention are useful for comparing mitochondrial biology profiles of different individuals or cells.

The arrays of this invention are useful for determining the profile associated with a physiological condition such as an energy-metabolism-related physiological condition. Physiological conditions can be healthy conditions or pathological conditions. Examples of healthy conditions in humans are centenaria and physical fitness. An example of a pathological condition in humans is Leigh's syndrome (LS). By determining profiles from individuals, with and without such physiological conditions, and comparing them, the mitochondrial biology profile representative and descriptive of the physiological condition can be determined, such as for humans in Examples 4-5. Profiles can similarly be determined for cells lines with phenotypes or genotypes associated with physiological conditions, such as in Examples 13-15. Profiles can also be determined for non-human animals, including mouse strains, with physiological conditions as in Examples 8-12, 16, and 19. The arrays of this invention are useful for determining the range of normal variation of expression of genes involved in mitochondrial biology, as in Example 20. When the arrays of this invention are used to determine a profile associated with a physiological condition, prepared target samples or pooled prepared target samples, of individuals with and without the physiological condition, but otherwise similar, are hybridized to an array of this invention. The hybridization of the prepared samples are measured and compared to, if possible, determine a profile associated with the physiological condition. The profile may be optimized by statistical analysis, as is known in the art, to only contain profile data on probes necessary for diagnosing the physiological condition.

The profile associated with a physiological condition can then be used for diagnosis or evaluation using the arrays of this invention, such as in Example 7. The profile of the physiological condition can be analyzed and the analysis used to optimize an array for diagnosis of the physiological condition. An optimized array for diagnosis of a physiological condition minimally contains at least one probe for the one or more genes that have altered expression levels in the context of the physiological condition, and probes for enough genes to eliminate other likely diagnoses. Diagnosis involves collecting a sample from an individual who might have the physiological condition, and determining the profile of the prepared sample using an array of this invention, using an array containing probes for all

genes involved in mitochondrial biology or fewer probes with at least as many probes as necessary for an array optimized for diagnosis of the physiological condition. The profile of the individual is then compared to the profile of the physiological condition, and the comparison is analyzed to determine the likelihood that the individual has the physiological condition. Arrays of this invention can also be used for screening individuals who are not suspected of having the particular physiological condition. A sample is collected from such an individual, prepared, and the mitochondrial biology profile of the individual is determined using an array of this invention, e.g., an array containing probes for all genes involved in mitochondrial biology. The profile of this individual is then compared to known mitochondrial biology profiles of one or more physiological conditions that the individual may have, to determine if the profile of the individual is indicative of a diagnosable physiological condition. As demonstrated in Example 16, the arrays of this invention are also useful for detecting profiles indicative of physiological conditions before the appearance of other symptoms.

The profile of, or associated with, a physiological condition is also useful for identifying biochemical pathways affected by the physiological condition and genes involved in causation of the physiological condition. If a profile of a physiological condition demonstrates alteration in the expression of a gene, that gene is a candidate for sequencing to identify a mutation causing the physiological condition. If a profile demonstrates alteration of expression of several genes, then genes known to regulate those are candidates for sequencing to identify a mutation causing the physiological condition. Example 3 describes using the arrays of this invention for the identification of mutations associated with physiological conditions.

The profile of a physiological condition is useful for creating and/or identifying animal models of human physiological conditions. The profile of a physiological condition may suggest types of mutations, such as knockouts, to create in order to mimic the physiological condition in an animal. The arrays of this invention are also useful for screening genetically engineered or other mutated populations to identify an individual animal having a similar profile, and thus associated with the physiological condition.

The same individual can be profiled, using arrays of this invention, repeatedly over time or after exposure to various environmental conditions, thereby determining the effects of

time or exposure. Equivalent individuals can also be profiled, using the arrays of this invention, at different ages or after exposure to different environmental conditions, thereby determining the effects of time or exposure. For example, a control group of mice of a particular genotype and of a particular age can be compared, using the arrays of this invention, to a group of experimental mice of the same genotype and age, that has been exposed to a certain environmental hazard, to determine the effects of the environmental hazard. Cell lines, as well as organisms, can be profiled after exposure to different environmental conditions, as in Example 15. Arrays of this invention are also useful for determining the effects of aging. Examples 8 and 19 demonstrate differences in profiles at different ages.

Therapy is an environmental condition, the effects of which can be tested using the arrays of this invention. Identification of the pathways affected in a physiological condition allows identification of therapies useful to treat individuals having the physiological condition. For example, if profiles are determined for the effects of classes of therapeutic agents, as new physiological conditions are profiled, relevant therapeutic agents can be easily identified. The profile of a physiological condition is useful for testing candidate therapies for treating individuals with the physiological condition. An individual, with or without the physiological condition, an animal model of the physiological condition in humans, or a cell line representative of an individual with the physiological condition, can be treated with a candidate therapy. A sample for profiling is collected after treatment, prepared, the profile is determined using an array of this invention, and compared to the profile of the same individual before treatment or to equivalent individuals or cells without treatment to determine the effect of the treatment. Therapies reversing the effects of the physiological condition can thereby be identified. Preventative therapies and therapies causing desired physiological conditions can similarly be identified.

The arrays of this invention are useful for monitoring the effectiveness of a therapy for a particular individual as well as for a population. The profile of a diagnosed individual can be determined, the individual given a therapy, and then the profile of the individual determined again, using the arrays of this invention. The therapy can be modified and the profile retested, until a satisfactory treated profile is obtained.

Arrays containing probes hybridizing at moderate to high stringency with human genes involved in mitochondrial biology are used for assaying prepared samples from humans, human cell lines, and prepared samples from closely related species. Arrays containing probes hybridizing at moderate to high stringency with mouse genes involved in mitochondrial biology are used for assaying prepared samples from mice, mouse cell lines, and prepared samples from closely related species.

The arrays of this invention are made using probes for genes involved in mitochondrial biology. Probes can be selected and generated from the lists of clones and sequences in Tables 3-5, or from sequences and clones representing genes involved in mitochondrial biology not listed in these tables. Probes can be generated in vitro by nucleic acid synthesis, PCR, cloning techniques or other techniques known in the art. Flanking or vector sequence may be minimized in the probe. Probes generated from Research Genetics clones (ResGen/Invitrogen, Carlsbad, CA) can be amplified by PCR as described in Example 22. Optionally, control probes are also selected for the arrays of this invention. Examples of clones and sequences for making control probes are listed in Table 6, SEQ ID NOS:3041-3044. If housekeeping genes are chosen as positive controls, usually they are derived from the same species as the non-control probes. Housekeeping gene probes are available from Stratagene (Spot ReportTM, La Jolla, CA, USA).

Examples of housekeeping genes are shown in Table 2. Housekeeping genes generally have a consistent amount of expression in all cells. Using the arrays of this invention, the expression of the 25 housekeeping genes listed in Table 2 were compared in 4 cell lines, LMEB4, NZB, 501-1, and the LM(TK) - cell line grown in media supplemented with glucose, pyruvate, and uridine (GUP). Some variability was present between cell lines. Housekeeping genes were also tested in 6 different mouse tissue samples (brain, heart, liver, kidney, spleen and muscle) in two strains of mice, CAP^R and NZB. Variation was again present, but slight.

Table 2

Description	Functional Class
Actin-gamma	Structural gene
A272 Capping protein	Structural gene
Glyceraldehyde phosphate dehydrogenase	Metabolism-glycolysis
DNA ligase I	DNA repair/synthesis
β -actin	Structural
Alkaline Phosphatase	Unclassified
40s Ribosomal protein S15	Protein synthesis
Hypoanthine phosphoribosyl transferase (HPRT)	Metabolism-nucleotide
Ribosomal protein L15	Protein synthesis
Ribosomal Protein S29	Protein translation
Acient ubiquinating protein	Metabolism-protein
Glyceraldehyde 3-phosphate dehydrogenase	Metabolism-glycolysis
Actin- α (skeletal muscle)	Structural
Murine ornithine decarboxylase	Metabolism-amino acid
calcium binding protein Cab45	Calcium homeostasis
Ribosomal protein L1A	Protein synthesis
RNA splicing protein	RNA processing
Actin-gamma (smooth muscle)	Structural gene
E2F transcription factor	Transcriptional regulation
Ubiquitin	Unclassified
Myosin 1	Structural
HPRT	Metabolism-nucleotide
Phospholipase A2 (14-3-3 zeta/delta)	Signal transduction
HPRT	Metabolism-nucleotide
Ribosomal protein L3	Protein synthesis

Arrays can be printed on solid substrates, e.g., glass microscope slides. Before printing, slides are prepared to provide a substrate for binding as in Example 23. Arrays can be printed using any printing techniques and machines known in the art. Printing involves placing the probes on the substrate, attaching the probes to the substrate, and blocking the substrate to prevent non-specific hybridization, as described in Example 24.

Samples useful for analyses using the arrays of this invention include total RNA samples and mRNA samples. RNA samples can be prepared as described in Example 25. An RNA sample is reverse transcribed into cDNA and simultaneously labeled, i.e. with one member of a two-color fluorescent system, such as Cy3-dCTP/Cy5-dCTP as described in Example 26. The arrays are hybridized with the prepared sample and washed at appropriate

stringencies accounting for the choices of sample and probes of the array. The hybridization stringency can be higher when the probe sequence has higher homology with the gene it interrogates and when the probe is larger. A reference target, standard target, or other sample target for direct comparison may be prepared and hybridized simultaneously to the same array. A prepared sample will not degrade during hybridization and is labeled. Prepared samples are reverse transcribed and fluorescently labeled.

Hybridization results can be measured and analyzed using equipment and software available in the art as described in Example 27. Before finalizing data, preliminary results are preferably normalized by methods known in the art. An example of normalization appears in Example 29. Analysis includes determination of statistical significance. Measurement may include normalization and analysis, including statistical analysis. Resulting data are typically stored in computer files.

Mitochondrial biology expression microarrays are useful for detecting alterations in gene expression caused by alterations in mitochondrial biology. Although commercially available total genome expression arrays from companies such as Incyte Pharmaceuticals or Affymetrix contain probes for ten to twenty times as many genes as the arrays of this invention, the commercially available arrays have limitations. Several genes and probes that have been included on the arrays of this invention are not available on the commercial arrays. The commercial arrays are also very expensive and the large data sets resulting from them can be rather cumbersome to analyze and manipulate. The smaller, more focused arrays of this invention allow the expression patterns of hundreds of mitochondrial genes to be monitored quickly and efficiently. This study shows that a custom-designed microarray for mitochondrial biology expression studies, including probes for nuclear as well as mitochondrial genes, is an effective tool for the analysis of gene expression changes caused by alterations in functions resulting from a mutation in a gene involved in mitochondrial biology or other changes in metabolic state. The cell line experiments in Examples 13-17 and 20 have been particularly informative in demonstrating the specificity and sensitivity of the arrays of this invention while the mouse tissue experiments in Examples 8-12 and 16-17 have shown the consistency of the arrays of this invention.

Clones used to generate probes are listed in Tables 3-5. Clones range from about 1 kb to about 4 kb. The inserts of most clones have been sequenced on the 5' and 3' ends.

Sequences of the 5' and 3' ends of the clones are usually about 200 nt to about 800 nt and are provided herein. Probes may be generated via several methods. For example, the clones listed in Tables 3-5 may be obtained commercially, the inserts purified and used as probes. Alternatively, a 5' or 3' sequence given in the sequence listings hereof may be used to design an oligonucleotide which may be synthesized and used to probe a library to identify a cDNA or genomic clone that is equivalent to the clone used to generate the original sequence. This newly identified cDNA or genomic equivalent clone may be used to generate a probe. Alternatively, a pair of sequences from the sequence listings, representing the 5' and 3' ends of one clone, may be used to design PCR primers, which may be used to PCR amplify an isolated nucleic acid that is equivalent to the insert of the corresponding clone from which the 5' and 3' were derived. This isolated nucleic acid may be used as a probe. Probes should not contain a vector sequence that hybridizes with any sequence in a sample. Methods for designing PCR primers and designing oligonucleotides for screening libraries are known in the art.

EXAMPLES

Example 1

Human Mitochondrial Biology Array

A human mitochondrial biology array is made from clones representing 650 expressed sequences involved in mitochondrial biology. The clones used to make probes that are placed on the array are shown in Table 3 which references SEQ ID NOS:1-994 provided herein setting forth the 5' and 3' sequences from these clones. The clones identified in Table 3 are used to make a set of probes called Human Probe Set #1. Control sequences are also placed this array. Controls include, but are not limited to blanks, DMSO, probes derived from plant sequences, sequence(s) not involved in mitochondrial biology, and poly adenine (40-60 nucleotides long).

Example 2

Mouse Mitochondrial Biology Array

A mouse mitochondrial biology array is made from clones representing expressed sequences. The clones placed on the array are shown in Table 4 which references sequence ID NOS:995-3040 provided herein setting forth the 5' and 3' sequences from these clones. See Tanaka, T.S. et al., (2000) "Genome-wide expression profiling of mid-gestation placenta and embryo using 15k mouse developmental cDNA microarray" *Proc. Natl. Acad. Sci. USA* 97:9127-9132. Equivalent clones useful as probes are listed in Table 5. The clones listed in Table 4 are preferable to the clones listed in Table 5. The clones identified in Table 4 are used to make a set of probes called Mouse Probe Set #2. The clones identified in Table 5 are used to make a set of probes called Mouse Probe Set #3. Control sequences are also placed this array. Controls include, but are not limited to blanks, DMSO, probes derived from plant sequences, sequence(s) not involved in mitochondrial biology, and poly adenine (40-60 nucleotides long). Sequences used to make probes for the mouse mitochondrial genes can also be found in GenBank Accession No. J01420, which provides the complete mouse mitochondrial genome. Preferably, the probes used for ATP8 and ATP6 do not cross-hybridize with each other.

Table 4

SEQ ID NO:	NIA Clone No.	Gene	Clone description	GenBank Accession No.	Unigene Cluster ID	Function
995	H3001A07	Mm.42805			Mm.42805	Energy/Metabolism
996						
997	H3001C04	major histocompatibility locus class III region: butyrophilin-like protein gene, partial cds; Notch4, PBX2, RAGE, lysophatidic acid acyl transferase-alpha, palmitoyl-protein thioesterase	Mus musculus major histocompatibility locus class III region: butyrophilin-like protein gene, partial cds; Notch4, PBX2, RAGE, lysophatidic acid acyl transferase-alpha, palmitoyl-protein thioesterase		Mm.7447	Transcription/Chromatin
998						
999	H3001F12	heparan sulfate (glucosamine) 3-O-sulfotransferase 1 (Hs3st1), mRNA	Mus musculus heparan sulfate (glucosamine) 3-O-sulfotransferase 1 (Hs3st1), mRNA	BG063066	Mm.100135	Energy/Metabolism

1023		mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA	Homo sapiens mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA		BG076643	Mm.86759	Energy/Metabolism
1024	H3004A04	ISCU1, alternatively spliced	Homo sapiens ISCU1 (ISCU) mRNA, complete cds, alternatively spliced		BG076641	Mm.29497	Energy/Metabolism
1025		mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA	Homo sapiens mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA		BG076643	Mm.86759	Energy/Metabolism
1026	H3004A02	ISCU1, alternatively spliced	Homo sapiens ISCU1 (ISCU) mRNA, complete cds, alternatively spliced		BG076641	Mm.29497	Energy/Metabolism
1027		mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA	Homo sapiens mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA		BG076643	Mm.86759	Energy/Metabolism
1028	H3004A04	ISCU1, alternatively spliced	Homo sapiens ISCU1 (ISCU) mRNA, complete cds, alternatively spliced		BG076641	Mm.29497	Energy/Metabolism
1029		mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA	Homo sapiens mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA		BG076643	Mm.86759	Energy/Metabolism
1030	H3004A02	ISCU1, alternatively spliced	Homo sapiens ISCU1 (ISCU) mRNA, complete cds, alternatively spliced		BG076641	Mm.29497	Energy/Metabolism
1031		mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA	Homo sapiens mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA		BG076643	Mm.86759	Energy/Metabolism
1032	H3004A04	ISCU1, alternatively spliced	Homo sapiens ISCU1 (ISCU) mRNA, complete cds, alternatively spliced		BG076641	Mm.29497	Energy/Metabolism
1033		mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA	Homo sapiens mannosyl (alpha-1,3-)-glycoprotein beta-1,4-N-acetylglucosaminyltransferase, isoform B (MGAT4B), mRNA		BG076643	Mm.86759	Energy/Metabolism

1034			sarco(endo)plasmic reticulum calcium ATPase (SERCA2) gene, promoter region, exons 1-3, and partial cds	Mus musculus sarco(endo)plasmic reticulum calcium ATPase (SERCA2) gene, promoter region, exons 1-3, and partial cds	BG076647	Mm.100531	Energy/Metabolism
1035	H3004A09						
1036			"Mouse mRNA for peripheral-type benzodiazepine receptor, complete cds"		BG076653	Mm.1508	Signal Transduction
1037	H3004B06						
1038	H3004C06					Mm.34776	Heat Shock/Stress
1039							
1040			"Mus musculus group V phospholipase A2 mRNA, complete cds"		BG063219	Mm.153446	Signal Transduction
1041	H3004E03						
1042			"Mus musculus protein tyrosine phosphatase 4a2 (Ptp4a2), mRNA"		BG076689	Mm.6355	Signal Transduction
1043	H3004F07						
1044			orotidine-5-monophosphate decarboxylase, 3' end	Mouse orotidine-5-monophosphate decarboxylase mRNA, 3' end	BG076701	Mm.13145	Energy/Metabolism
1045	H3004G09						
1046			TF-1 apoptosis related protein 19	Mus musculus TF-1 apoptosis related protein 19 (Tfar19), mRNA	BG076705	Mm.21650	Apoptosis
1047	H3004H01						
1048			protein arginine N-methyltransferase 1 (Mfamt1), alternatively spliced	Mus musculus protein arginine N-methyltransferase 1 (Mfamt1) mRNA, complete cds, alternatively spliced	BG076710	Mm.27545	Energy/Metabolism
1049	H3004H06						
1050			H19 and muscle-specific Nctc1 genes, sequence	Mus musculus H19 and muscle-specific Nctc1 genes, complete sequence	BG076718	Mm.12970	Protein Synthesis/Translational Control
1051	H3005A04						
1052			"Mus musculus mammalian relative of DnaJ (Mrj-pending), mRNA"		BG076720	Mm.2701	Heat Shock/Stress
1053	H3005A06						

1054	H3005B03	thioredoxin reductase 1 (Txnrd1),	Mus musculus thioredoxin reductase 1 (Txnrd1), mRNA	BG076728	Mm.44552	Energy/Metabolism
1055						
1056	H3005B06	amidophosphoribosyltransferase	Rattus norvegicus mRNA for amidophosphoribosyltransferase	BG076730	Mm.27743	Energy/Metabolism
1057						
1058	H3005D01	dipeptidylpeptidase 4 (Dpp4),	Mus musculus dipeptidylpeptidase 4 (Dpp4), mRNA	BG076746	Mm.1151	Energy/Metabolism
1059						
1060	H3005D03	orotidine-5-monophosphate decarboxylase, 3 end	Mouse orotidine-5-monophosphate decarboxylase mRNA, 3 end	BG076748	Mm.802	Energy/Metabolism
1061						
1062	H3005E09	"Homo sapiens antiqutin 1 (ATQ1), mRNA"		BG076761	Mm.30250	Signal Transduction
1063						
1064	H3005E10	M.musculus sodium/potassium ATPase beta subunit	M.musculus mRNA for sodium/potassium ATPase beta subunit	BG076762	Mm.4550	Energy/Metabolism
1065						
1066	H3005F06	"Mus musculus pelle-like protein kinase mRNA, complete cds"		BG076768	Mm.38241	Signal Transduction
1067						
1068	H3005G01	glycerol-3-phosphate dehydrogenase	Mouse mRNA for glycerol-3-phosphate dehydrogenase, complete cds	BG076772	Mm.3711	Energy/Metabolism
1069						
1070	H3005G06	peptidylprolyl isomerase B (Ppib),	Mus musculus peptidylprolyl isomerase B (Ppib), mRNA	BG076776	Mm.2412	Energy/Metabolism
1071						
1072	H3005G12	methionyl tRNA synthetase	Homo sapiens mRNA for methionyl tRNA synthetase, complete cds	BG063326	Mm.28173	Energy/Metabolism
1073						
1074	H3006E03	cytochrome c-1 gene	Human cytochrome c-1 gene, complete cds	BG076814	Mm.29196	Apoptosis
1075						
1076	H3006E12	UDP-glucose:glycoprotein glucosyltransferase 1 (HUGT1),	Homo sapiens UDP-glucose:glycoprotein glucosyltransferase 1 (HUGT1), mRNA	BG076821	Mm.45651	Energy/Metabolism
1077						

1078 1079	H3006G03	puromycin-sensitive aminopeptidase (Psa), mRNA	Mus musculus puromycin-sensitive aminopeptidase (Psa), mRNA	BG076835	Mm.29824	Energy/Metabolism
1080 1081	H3006H05	"Mus musculus calmodulin synthesis (Cam) cDNA, complete cds"		BG076847	Mm.18041	Signal Transduction
1082 1083	H3006H10	"Mus musculus circadian locomotor output cycles kaput (Clock), mRNA"		BG063409	Mm.3552	Signal Transduction
1084 1085	H3007E02	glutathione S-transferase pi class (mGSTpiA) and (mGSTpiB) genes	Mus musculus glutathione S-transferase pi class (mGSTpiA) and (mGSTpiB) genes, complete cds	BG076872	Mm.426	Energy/Metabolism
1086 1087	H3007G07	Mm.29713			Mm.29713	Energy/Metabolism
1088 1089	H3007G08	histidyl tRNA synthetase (Hars), mRNA	Mus musculus histidyl tRNA synthetase (Hars), mRNA	BG076882	Mm.10528	Energy/Metabolism
1090 1091	H3008A02	H.sapiens gene 2-oxoglutarate carrier protein	H.sapiens gene for 2-oxoglutarate carrier protein	BG076887	Mm.28466	Energy/Metabolism
1092 1093	H3008A05	Mus musculus GTP-binding protein (mSara) homologue mRNA, complete cds		BG076890	Mm.6698	Signal Transduction
1094 1095	H3008B05	Mus musculus dystroglycan 1 (DAG1) gene, exons 1 and 2 and complete cds		BG063514	Mm.7524	Matrix/Structural Proteins
1096 1097	H3008B06	ferritin heavy chain (Fth), mRNA	Mus musculus ferritin heavy chain (Fth), mRNA	BG063515	Mm.1776	Energy/Metabolism
1098 1099	H3008B07	H3008B07				Energy/Metabolism
1100 1101	H3008B10	ATPase, H+ transporting, lysosomal I (Atp6i), mRNA	Mus musculus ATPase, H+ transporting, lysosomal I (Atp6i), mRNA	BG063518	Mm.19185	Energy/Metabolism

1102		"Mus musculus PKC α -interacting protein PICOT (PICOT) mRNA, complete cds"		BG076907	Mm.29675	Signal Transduction
1103	H3008C02					
1104	H3008C07	tryptophan-2,3-dioxygenase (TDO),	Mus musculus tryptophan-2,3-dioxygenase (TDO), mRNA	BG076911	Mm.21545	Energy/Metabolism
1105						
1106		"HSP90=heat shock protein [mice, heart, mRNA Partial, 806 nt]"		AW538216	Mm.2180	Heat Shock/Stress
1107	H3008C09					
1108			Mus musculus adenylosuccinate lyase (Adsl), mRNA	BG076914	Mm.38151	Energy/Metabolism
1109	H3008C12	adenylosuccinate lyase (Adsl),				Energy/Metabolism
1110						
1111	H3008D12					
1112		"Mus musculus caseinolytic protease, ATP-dependent, (E. coli) proteolytic subunit homolog (Clpp), mRNA"		BG076923	Mm.15243	Signal Transduction
1113	H3008E02					
1114					Mm.3991	Energy/Metabolism
1115	H3008F09	Mm.3991				
1116		Btk locus, alpha-D-galactosidase A (Ags), ribosomal protein (L44L), and Brutons tyrosine kinase (Btk) genes	Mus musculus Btk locus, alpha-D-galactosidase A (Ags), ribosomal protein (L44L), and Brutons tyrosine kinase (Btk) genes, complete cds			Matrix/Structural Proteins
1117	H3008G05	Brutons tyrosine kinase (Btk) genes			Mm.30034	
1118		M.musculus gene cathepsin D, exons 6-9	M.musculus gene for cathepsin D, exons 6-9	AW538365		Apoptosis
1119	H3008H06	9				
1120		serine palmitoyl transferase, subunit II gene; and unknown genes	Homo sapiens serine palmitoyl transferase, subunit II gene, complete cds; and unknown genes			
1121	H3008H07	gene; and unknown genes			Mm.29034	

1122	H3009A09	Slc20a1		Mus musculus gibbon ape leukemia virus receptor (Slc20a1) gene, exon 10 and complete cds	BG063583	Mm.16757	Energy/Metabolism
1123							
1124	H3009B04	Fen1		Mus musculus flap structure specific endonuclease 1 (Fen1), mRNA	BG063590	Mm.2952	Energy/Metabolism
1125							
1126	H3009C03	Tgm1		Mus musculus transglutaminase 1, K polypeptide (Tgm1), mRNA	BG076966	Mm.41964	Energy/Metabolism
1127							
1128			"Mus musculus heat shock protein, 86				
1129	H3009C07	kDa 1 (Hsp86-1), mRNA"			BG063605	Mm.1843	Heat Shock/Stress
1130							
1131	H3009D02	ATPase delta		Rattus norvegicus delta subunit of F1F0 ATPase gene, complete cds	BG076975	Mm.22514	Energy/Metabolism
1132							
1133	H3009E08	Cox8a		Mus musculus cytochrome c oxidase, subunit VIIIa (Cox8a), mRNA	BG076988	Mm.14022	Energy/Metabolism
1134							
1135	H3009G03	"Mus musculus lithium-sensitive myo-inositol monophosphatase A1 (IMPA1) mRNA, complete cds"			BG063641	Mm.8089	Signal Transduction
1136							
1137	H3010C12	mannosyl (alpha-1,6-)-glycoprotein beta-1,2-N-acetylglucosaminyltransferase (MGAT2),		Homo sapiens mannosyl (alpha-1,6-)-glycoprotein beta-1,2-N-acetylglucosaminyltransferase (MGAT2), mRNA	BG077070	Mm.24293	Energy/Metabolism
1138							
1139	H3010D10	tumor necrosis factor alpha converting enzyme (TACE) gene, exon 3, sequence		Mus musculus tumor necrosis factor alpha converting enzyme (TACE) gene, exon 3, complete sequence	BG077079	Mm.105014	Apoptosis
1140							
1141	H3010F06	H3010F06					Energy/Metabolism

11142			programmed cell death 6 interacting	Mus musculus programmed cell death 6 interacting protein (Pcd6ip), mRNA	BG077095	Mm.29816	Apoptosis
11143	H3010F07		protein (Pcd6ip),				
11144			protein-L-isoaspartate (D-aspartate) O-	Mus musculus protein-L-isoaspartate (D-aspartate) O-methyltransferase 1 (Pcm1), mRNA	BG077121	Mm.25293	Energy/Metabolism
11145	H3011A03		methyltransferase 1 (Pcm1),				
11146			H.sapiens mitogen inducible gene mig-2	H.sapiens mitogen inducible gene mig-2, complete CDS		Mm.29842	Signal Transduction
11147	H3011B01						Energy/Metabolism
11148							
11149	H3011C08	H3011C08				Mm.2368	
11150							
11151	H3011E06	mTim17a				Mm.21743	
11152							
11153	H3011E10	Sid329 (Sid329),		Mus musculus Sid329 (Sid329), mRNA			
11154			"House mouse mRNA for MAP kinase		BG077180	Mm.57203	Signal Transduction
11155	H3011H09	kinase 3b, complete cds"					
11156				Homo sapiens serine palmitoyl transferase, subunit II gene, complete cds; and unknown genes			
11157	H3012A05	serine palmitoyl transferase					
11158					BG077186	Mm.34184	Heat Shock/Stress
11159	H3012A07	"Mus musculus heat shock 70 protein (Hsc70) gene, complete cds"					
11160			"Mus musculus scavenger receptor class B type I (mSR-BI) mRNA, complete cds"		BG077202	Mm.4603	Heat Shock/Stress
11161	H3012C06			Homo sapiens glyoxalase I (GLO1), mRNA		Mm.17362	Energy/Metabolism
11162							
11163	H3012F03	GLO1			BG077222	Mm.21974	Signal Transduction
11164			"Mus musculus c-src tyrosine kinase				
11165	H3012F10	(Csk), mRNA"					

1166	H3012H04	"Mus musculus protein kinase Lkb1 (Lkb1) and R29144/1 genes, partial cds"		BG063794	Mm.29947	Signal Transduction
1167	H3013B02	M.musculus vacuolar adenosine triphosphatase subunit B	M.musculus mRNA for vacuolar adenosine triphosphatase subunit B	BG077252	Mm.10727	Energy/Metabolism
1170	H3013B08	pyridoxal (pyridoxine, vitamin B6) kinase (PDXK),	Homo sapiens pyridoxal (pyridoxine, vitamin B6) kinase (PDXK), mRNA	BG063905	Mm.26103	Energy/Metabolism
1171	H3013C04	"Mus musculus mRNA, complete cds"		AW539669	Mm.9846	Heat Shock/Stress
1173	H3013D03	"Mus musculus RAB10, member RAS oncogene family (Rab10), mRNA"		BG077272	Mm.21985	Signal Transduction
1175	H3013D11	Mouse metallothionein II (MT-II) gene		BG063925	Mm.89170	Heat Shock/Stress
1177	H3013E04	adenylyl cyclase-associated protein (CAP),	Homo sapiens adenylyl cyclase-associated protein (CAP), mRNA	Mm.43660		
1179	H3013E07	dolichyl-phosphate alpha-N-acetylglucosaminophosphotransferase 2 (Dpag2),	Mus musculus dolichyl-phosphate alpha-N-acetylglucosaminophosphotransferase 2 (Dpag2), mRNA	BG063933	Mm.18353	Energy/Metabolism
1181	H3013F01	delta-aminolevulinic acid dehydratase (LV),	Mus musculus delta-aminolevulinic acid dehydratase (LV), mRNA	BG063937	Mm.6988	Energy/Metabolism
1183	H3013F02	"Mus musculus aurora-related kinase 1 (ARK1) mRNA, complete cds"		BG077290	Mm.11738	Signal Transduction
1185	H3013G10	survivin40, survivin121, and survivin140 genes, alternative splice products	Mus musculus survivin40, survivin121, and survivin140 genes, alternative splice products, complete cds	BG077309	Mm.8552	Apoptosis

1187	H3014A05	partial aminopeptidase B (APB gene)	Homo sapiens partial mRNA for aminopeptidase B (APB gene)	BG077324	Mm.29706	Energy/Metabolism
1188		"Rattus norvegicus protein associating with small stress protein PASS1 (Pass1) mRNA, complete cds"				
1189	H3014A06				Mm.45272	Heat Shock/Stress
1190		queine tRNA-ribosyltransferase	Mus musculus queine tRNA-ribosyltransferase (LOC60507), mRNA	BG077329	Mm.24178	Energy/Metabolism
1191	H3014A11	(LOC60507),			Mm.29849	Energy/Metabolism
1192	H3014B06	Mm.29849			Mm.2795	
1193		Mus musculus surfet gene 4 (Surf4), mRNA		BG063996		Heat Shock/Stress
1194	H3014C08					
1195						
1196	H3014C10					
1197		solute carrier family 28 (sodium-coupled nucleoside transporter), member 2 (Slc28a2), mRNA	Mus musculus solute carrier family 28 (sodium-coupled nucleoside transporter), member 2 (Slc28a2), mRNA	BG077361	Mm.29510	Energy/Metabolism
1198	H3014C12					
1199						
1200		UDP-Gal:betaGlcNAc beta 1,3-galactosyltransferase, polypeptide 4 (B3galt4),	Mus musculus UDP-Gal:betaGlcNAc beta 1,3-galactosyltransferase, polypeptide 4 (B3galt4), mRNA	BG077355	Mm.11132	Energy/Metabolism
1201	H3014E06					
1202		signal peptidase 21kDa subunit	Rattus norvegicus mRNA for signal peptidase 21kDa subunit, complete cds	BG077356	Mm.27800	Energy/Metabolism
1203	H3014E07					
1204	H3014F05	"Mus musculus S100 calcium-binding protein A13 (S100a13), mRNA"			Mm.6523	Signal Transduction
1205		UDP-Gal:betaGlcNAc beta 1,4-galactosyltransferase, polypeptide 1 (B4galt1),	Mus musculus UDP-Gal:betaGlcNAc beta 1,4-galactosyltransferase, polypeptide 1 (B4galt1), mRNA	BG077374	Mm.15622	Energy/Metabolism
1206	H3014F06					

1207									
1208	H3014G07	phosphoprotein enriched in astrocytes 15 (Pea15),	Mus musculus phosphoprotein enriched in astrocytes 15 (Pea15), mRNA	BG064035	Mm.544	Apoptosis			
1209									
1210	H3014G08	protease (prosome, macropain) 26S subunit, ATPase 5 (Psmc5),	Mus musculus protease (prosome, macropain) 26S subunit, ATPase 5 (Psmc5), mRNA	BG077385	Mm.665	Energy/Metabolism			
1211									
1212	H3014G09	protease (prosome, macropain) 26S subunit, ATPase 5 (Psmc5),	Mus musculus protease (prosome, macropain) 26S subunit, ATPase 5 (Psmc5), mRNA		Mm.665	Energy/Metabolism			
1213									
1214	H3014H07	tyrosyl-tRNA synthetase (YARS),	Homo sapiens tyrosyl-tRNA synthetase (YARS), mRNA	BG077395	Mm.20353	Energy/Metabolism			
1215									
1216	H3015A01	major histocompatibility locus class III region:butyrophilin-like protein gene, partial cds; Notch4, PBX2, RAGE, lysophatidic acid acyl transferase-alpha, palmitoyl-protein thioestera	Mus musculus major histocompatibility locus class III region:butyrophilin-like protein gene, partial cds; Notch4, PBX2, RAGE, lysophatidic acid acyl transferase-alpha, palmitoyl-protein thioestera		Mm.27416				
1217									
1218	H3015B03	hypothetical protein FLJ10535,	Homo sapiens hypothetical protein FLJ10535 (FLJ10535), mRNA	BG077413	Mm.24187	Energy/Metabolism			
1219									
1220	H3015C02	methionine adenosyltransferase alpha subunit gene fragment	Homo sapiens methionine adenosyltransferase alpha subunit gene fragment	BG064075	Mm.29815	Energy/Metabolism			
1221									
1222	H3015D05	MSTP029	Homo sapiens MSTP029 mRNA, complete cds	BG077438	Mm.30147	Energy/Metabolism			
1223									
1224	H3015E06	Tnf receptor-associated factor 1 (Traf1),	Mus musculus Tnf receptor-associated factor 1 (Traf1), mRNA	BG064103	Mm.12898	Apoptosis			
1225									
1226	H3016C10					Heat Shock/Stress			

1227	H3016D01	Mm.20201							Energy/Metabolism
1228									
1229									
1230	H3016D08	BCL2/adenovirus E1B 19 kDa-interacting protein 3-like (Bnip3l), mRNA				BG077518	Mm.29820		Apoptosis
1231									
1232	H3016E10	Mus musculus mG28K mRNA for GTP-binding protein like 1, complete cds				BG077528	Mm.28954		
1233									
1234	H3016F03	Tim44					Mm.34791		Matrix/Structural Proteins
1235									
1236	H3016F07	M. musculus glutamyl-tRNA synthetase				BG064194	Mm.27190		Energy/Metabolism
1237	H3016F11								Heat Shock/Stress
1238									
1239	H3017A02	ornithine decarboxylase antizyme 2 (Oaz2), mRNA				BG077570	Mm.675		Energy/Metabolism
1240									
1241	H3017C11	"Mus musculus RAN guanine nucleotide release factor (Rangrf-pending), mRNA"				BG077598	Mm.143774		Signal Transduction
1242									
1243	H3017D04	"Homo sapiens hect (homologous to the E6-AP (UBE3A) carboxyl terminus) domain and RCC1 (CHC1)-like domain (RLD) 1 (HERC1), mRNA"				BG064250	Mm.102717		Heat Shock/Stress
1244									
1245	H3017E04	"Mus musculus cathepsin Z precursor (CtSz) mRNA, complete cds"				BG077611	Mm.115		Signal Transduction
1246									
1247	H3017E11	"Mus musculus retinoblastoma binding protein 7 (Rbbp7), mRNA"				AW544081	Mm.1603		Heat Shock/Stress

1248			phenylalanyl tRNA synthetase beta subunit (Fr5b)	Mus musculus phenylalanyl tRNA synthetase beta subunit (Fr5b) mRNA, complete cds	BG077633	Mm.28922	Energy/Metabolism
1249	H3017G06			Mus musculus beta-1,4-galactosyltransferase III (B4galT3), mRNA	BG077551	Mm.150720	Energy/Metabolism
1250				Homo sapiens partial mRNA for aminopeptidase B (APB gene)	BG077553		Energy/Metabolism
1251	H3018A02	B4galT3					
1252							
1253	H3018A04	APB					
1254			"Mus musculus Cctq gene for chaperonin containing TCP-1 theta subunit, complete cds"				
1255	H3018A08			Mus musculus cytochrome P450, 17 (Cyp17), mRNA	BG064304	Mm.17989	Heat Shock/Stress
1256							
1257	H3018A11	Cyp17			BG064307	Mm.1262	Energy/Metabolism
1258							
1259	H3018B08	thimet oligopeptidase		Mus musculus thimet oligopeptidase mRNA, complete cds	BG077656	Mm.26995	Energy/Metabolism
1260							
1261	H3018F06						Heat Shock/Stress
1262							
1263	H3018G08	UDP-galactose 4 epimerase (GALE)		Homo sapiens UDP-galactose 4 epimerase (GALE) gene, complete cds	BG077710	Mm.20363	Energy/Metabolism
1264			ATP binding protein associated with cell differentiation (APACD),	Homo sapiens ATP binding protein associated with cell differentiation (APACD), mRNA			
1265	H3019A07					Mm.28438	Energy/Metabolism
1266	H3019B01	ATPase, Na+/K+-transporting, beta 1 polypeptide (Atp1b1),		Mus musculus ATPase, Na+/K+-transporting, beta 1 polypeptide (Atp1b1), mRNA	BG077733	Mm.4550	Energy/Metabolism
1267							
1268	H3019B03	acyl-coenzyme A:cholesterol acyltransferase [mice, peritoneal macrophages, , 3041 nt]	acyl-coenzyme A:cholesterol acyltransferase [mice, peritoneal macrophages, , 3041 nt]	acyl-coenzyme A:cholesterol acyltransferase [mice, peritoneal macrophages, mRNA, 3041 nt]	BG077735	Mm.28099	Matrix/Structural Proteins

1269		Mus musculus microtubule-associated protein 4 (Mtap4), mRNA			BG077742	Mm.12625	Matrix/Structural Proteins
1270	H3019B10			Homo sapiens CGI-107 protein (LOC51012), mRNA		Mm.30065	
1271							
1272	H3019C06	CGI-107 protein (LOC51012),					
1273				Mus musculus core1 UDP-galactose:N-acetyl-galactosamine-alpha-R beta 1,3-galactosyltransferase (C1galt1) mRNA, complete cds			
1274	H3019C11	core1 UDP-galactose:N-acetyl-galactosamine-alpha-R beta 1,3-galactosyltransferase (C1galt1)			BG077752	Mm.102752	Energy/Metabolism
1275							
1276	H3019C12	"Mus musculus GTP-binding protein (mSara) homologue mRNA, complete cds"			BG077753	Mm.6698	Signal Transduction
1277							
1278	H3019D09	"Mus musculus protein kinase C inhibitor (mPKCI) mRNA, complete cds"			BG077758	Mm.425	Signal Transduction
1279							
1280	H3019E05	Mm.38994				Mm.38994	Energy/Metabolism
1281							
1282	H3019E12	F1F0-type ATP synthase subunit d		Homo sapiens F1F0-type ATP synthase subunit d mRNA, complete cds	BG077769	Mm.102755	Energy/Metabolism
1283							
1284	H3019F05	Mouse tyrosine kinase (c-abl) mRNA			BG077774	Mm.1318	Signal Transduction
1285							
1286	H3019F06	domesticus tumor necrosis factor receptor p60 homologue 1 (Tnfrh1 gene)		Mus musculus domesticus mRNA for tumor necrosis factor receptor p60 homologue 1 (Tnfrh1 gene)	BG077775	Mm.103353	Apoptosis
1287							
1288	H3019F07	10 (Skk10), mRNA "		"Mus musculus serine/threonine kinase	BG077776	Mm.8235	Signal Transduction
1289							
1290	H3019F10	phosphomannomutase 2 (Pmm2),					Energy/Metabolism

1291	H3019G05	alkaline phosphatase 2, liver (Akp2),	Mus musculus phosphomannomutase 2 (Pmm2), mRNA	BG077784	Mm.9699	Energy/Metabolism
1292	H3019H07	ATPase-like vacuolar proton channel (Atp1),	Mus musculus alkaline phosphatase 2, liver (Akp2), mRNA	BG077796	Mm.1265	Energy/Metabolism
1295	H3019H11	H3019F10	Mus musculus ATPase-like vacuolar proton channel (Atp1), mRNA	BG077799	Mm.30155	Energy/Metabolism
1296	H3020A02	nucleoside diphosphatase (ER-UDPase gene)	Mus musculus mRNA for nucleoside diphosphatase (ER-UDPase gene)	BG077800	Mm.10211	Energy/Metabolism
1299	H3020A07	serine palmitoyl transferase, subunit II gene; and unknown genes	Homo sapiens serine palmitoyl transferase, subunit II gene, complete cds; and unknown genes		Mm.22626	
1301	H3020B08	ferritin light chain 1 (Ftl1),	Mus musculus ferritin light chain 1 (Ftl1), mRNA	BG077812	Mm.7500	Energy/Metabolism
1303	H3020C02	"Mouse metallothionein-I (MT-I) gene, 5' end"		BG077818	Mm.2041	Heat Shock/Stress
1305	H3020D10	isocitrate dehydrogenase 3 (NAD+)	Homo sapiens isocitrate dehydrogenase 3 (NAD+) alpha (IDH3A), mRNA	BG077913	Mm.29051	Energy/Metabolism
1306	H3020E01	"Mus musculus wagneri gene for 105-kDa heat shock protein, exon 18 and complete cds"		BG064500	Mm.34828	Heat Shock/Stress
1309	H3020H04	squalene epoxidase (Sqle),	Mus musculus squalene epoxidase (Sqle), mRNA	BG077950	Mm.22663	Energy/Metabolism
1311	H3020H07	BALB/c GDP-dissociation inhibitor	Mus musculus BALB/c GDP-dissociation inhibitor (GDI-1) mRNA, partial cds	BG077953	Mm.28084	Energy/Metabolism
1312						

1313	H3020H10	man 6-P receptor (46MPR)	Mouse man 6-P receptor (46MPR) mRNA, complete cds	BG064540	Mm.1358	Energy/Metabolism
1314	H3021A02	programmed cell death 6 (Pdc6),	Mus musculus programmed cell death 6 (Pdc6), mRNA	BG077957	Mm.24254	Apoptosis
1317	H3021A11	small zinc finger-like protein (Tim13)	Mus musculus small zinc finger-like protein (Tim13) mRNA, complete cds	BG077964	Mm.22201	Energy/Metabolism
1318	H3021A12	M.musculus (clone S5) WRS tryptophan--tRNA ligase	M.musculus (clone S5) WRS mRNA for tryptophan--tRNA ligase	BG077965	Mm.38433	Energy/Metabolism
1321	H3021B05	M.musculus Cl-23 kD gene	M.musculus Cl-23 kD gene	BG077969	Mm.44227	Energy/Metabolism
1323	H3021B08	mitochondrial carrier peroxisomal membrane protein, 34 kDa member			Mm.306	
1324	H3021C09	17 PMP34				Apoptosis
1325	H3021D07	"Mus musculus proliferin related protein (Plfr), mRNA"				
1327	H3021E11	vacuolar adenosine triphosphatase subunit A gene	Mus musculus vacuolar adenosine triphosphatase subunit A gene, complete cds	BG064589	Mm.29771	Energy/Metabolism
1329	H3021F01	aspartyl aminopeptidase (Dnpep),	Mus musculus aspartyl aminopeptidase (Dnpep), mRNA	BG077839	Mm.24680	Energy/Metabolism
1331	H3021F08	"Mus musculus chaperonin subunit 7 (eta) (Cct7), mRNA"		BG077843	Mm.914	Heat Shock/Stress
1333	H3021G03	"Mus musculus serine/threonine protein phosphatase type 1 alpha mRNA, complete cds"		BG077848	Mm.1970	Signal Transduction

1337	H3021H03	"Mus musculus Ras suppressor protein 1 (Rsu1), mRNA"			BG077860	Mm.905	Signal Transduction
1338							
1339	H3022A04	Cricetus griseus Phosphatidylglycerophosphate synthase complete cds			BG064623	Mm.28864	Energy/Metabolism
1340							
1341	H3022A05	"Mus musculus RAB23, member RAS oncogene family (Rab23), mRNA"			BG077872	Mm.40644	Signal Transduction
1342							
1343	H3022B12	Homo sapiens ribonuclease P (14kD) (RPP14), mRNA			BG064641	Mm.41801	Energy/Metabolism
1344							
1345	H3022D02	Homo sapiens dolichyl-phosphate beta-glucosyltransferase mRNA, complete cds			BG064654	Mm.27890	Energy/Metabolism
1346							
1347	H3022D03	Mus musculus galactokinase gene, complete cds			BG064655	Mm.2820	Energy/Metabolism
1348							
1349	H3022D09	Mouse beta-glucuronidase gene, complete cds			BG077995	Mm.3317	Energy/Metabolism
1350							
1351	H3022E01	Mus musculus GLUT4 vesicle protein mRNA, partial cds			BG064664	Mm.29010	Energy/Metabolism
1352							
1353	H3022E09	Homo sapiens a disintegrin-like and metalloprotease (reprolysin type) with thrombospondin type 1 motif, 4 (ADAMTS4), mRNA			BG078006	Mm.102791	Energy/Metabolism
1354							
1355	H3022F06	Mus musculus malic enzyme, supernatant (Mod1), mRNA			BG064680	Mm.29998	Energy/Metabolism
1356							
1357	H3022G02	Mus musculus 26S protease ATPase (mss1) mRNA, partial cds			BG078023	Mm.2462	Energy/Metabolism
1358							

1359	H3022G03	26S protease ATPase (mss1), partial cds	Mus musculus 26S protease ATPase (mss1) mRNA, partial cds	BG078024	Mm.2462	Energy/Metabolism
1360						
1361	H3022H03	serine/threonine kinase 17b (apoptosis-inducing) (STK17B),	Homo sapiens serine/threonine kinase 17b (apoptosis-inducing) (STK17B), mRNA	BG078034	Mm.25559	Apoptosis
1362						
1363	H3022H06	"Mouse serine/threonine phosphatase-2C (PP2C) mRNA, complete cds"		BG064691	Mm.849	Signal Transduction
1364						
1365	H3023A10	folypolyglutamate synthetase precursor (Fpgs)	Mus musculus folypolyglutamate synthetase precursor (Fpgs) mRNA, complete cds	BG064717	Mm.3830	Energy/Metabolism
1366						
1367	H3023B01					Heat Shock/Stress
1368						
1369	H3023B11	"Mouse mRNA for HSP60 protein (clones 3T3-7, -9, and -M1)"		BG064728	Mm.1777	Heat Shock/Stress
1370						
1371	H3023B12	Mouse cDNA for heat shock protein 65		BG064729	Mm.1777	Heat Shock/Stress
1372						
1373	H3023C05	Homo sapiens nuclear receptor binding protein (NRBP), mRNA		BG064733	Mm.22029	
1374						
1375	H3023C07	peroxiredoxin 5 (Prdx5),	Mus musculus peroxiredoxin 5 (Prdx5), mRNA	BG064735	Mm.6587	Energy/Metabolism
1376						
1377	H3023C08	ribonucleotide reductase M1 (Rrm1),	Mus musculus ribonucleotide reductase M1 (Rrm1), mRNA	BG064736	Mm.656	Energy/Metabolism
1378						
1379	H3023C09	Mm.29735			Mm.29735	Energy/Metabolism
1380						
1381	H3023D06	Mus musculus phosphoglycerate kinase (Pgk1-ps1) processed pseudogene		BG064745	Mm.188	Signal Transduction
1382						

1383 1384	H3023D08	glutamate pyruvate transaminase (GPT) gene	Human glutamate pyruvate transaminase (GPT) gene, complete cds	BG064747	Mm.30130	Energy/Metabolism
1385 1386	H3023D09	partial xylosyltransferase II (XT-II gene)	Mus musculus partial mRNA for xylosyltransferase II (XT-II gene)	BG078081	Mm.100638	Energy/Metabolism
1387 1388	H3023E11	SDHD gene small subunit of cytochrome b of succinate dehydrogenase	Homo sapiens SDHD gene for small subunit of cytochrome b of succinate dehydrogenase, complete cds	BG078095	Mm.10406	Energy/Metabolism
1389 1390	H3023F02	"Mus musculus phosphatidylinositol 4-phosphate 5-kinase, type 1 beta (Pip5k1b), mRNA"		BG064765	Mm.3191	Signal Transduction
1391 1392	H3023F07	"Mus musculus Ccte gene for chaperonin containing TCP-1 epsilon subunit, complete cds"		BG064769	Mm.1813	Heat Shock/Stress
1393 1394	H3023F08	"Mus musculus Ccte gene for chaperonin containing TCP-1 epsilon subunit, complete cds"		BG064770	Mm.1813	Heat Shock/Stress
1395 1396	H3023F09	glucosamine-6-phosphate deaminase (Gnpda)	Mus musculus glucosamine-6-phosphate deaminase (Gnpda) mRNA, complete cds	BG064771	Mm.22374	Energy/Metabolism
1397 1398	H3023F10	"Mus musculus heat shock protein, 86 kDa 1 (Hsp86-1), mRNA"		BG064772	Mm.1843	Heat Shock/Stress
1399 1400	H3023F12	"Mus musculus heat shock protein, 86 kDa 1 (Hsp86-1), mRNA"		BG064774	Mm.1843	Heat Shock/Stress
1401 1402	H3023G01	"Mus musculus heat shock protein, 86 kDa 1 (Hsp86-1), mRNA"		BG064775	Mm.1843	Heat Shock/Stress

1403	H3023G05	phosphoribosyl pyrophosphate synthetase 1 (Prps1),	Mus musculus phosphoribosyl pyrophosphate synthetase 1 (Prps1), mRNA	BG064779	Mm.25198	Energy/Metabolism
1404						
1405	H3023H09	ferritin L-subunit gene exons 1-4	Mus musculus ferritin L-subunit gene exons 1-4, complete cds	BG064794	Mm.7500	Energy/Metabolism
1406						
1407	H3023H10	ferritin L-subunit gene exons 1-4	Mus musculus ferritin L-subunit gene exons 1-4, complete cds	BG064795	Mm.7500	Energy/Metabolism
1408						
1409	H3023H11	ferritin L-subunit gene exons 1-4	Mus musculus ferritin L-subunit gene exons 1-4, complete cds	BG064796	Mm.7500	Energy/Metabolism
1410						
1411	H3023H12	lactate dehydrogenase 1, A chain (Ldh1),	Mus musculus lactate dehydrogenase 1, A chain (Ldh1), mRNA	BG064797	Mm.26504	Energy/Metabolism
1412						
1413	H3024A02	polymerase, gamma (Polg),	Mus musculus polymerase, gamma (Polg), mRNA	BG064799	Mm.3616	DNA Replication
1414						
1415	H3024A06	alcohol dehydrogenase 5 (Adh5),	Mus musculus alcohol dehydrogenase 5 (Adh5), mRNA	BG064803	Mm.3874	Energy/Metabolism
1416						
1417	H3024A11	DNA M2 subunit of ribonucleotide reductase (EC 1.17.4.1)	Mouse DNA for M2 subunit of mouse ribonucleotide reductase (EC 1.17.4.1)	BG078138	Mm.99	Energy/Metabolism
1418						
1419	H3024B03	"Mus musculus chaperonin subunit 3 (gamma) (Cct3), mRNA"		BG064811	Mm.3576	Heat Shock/Stress
1420						
1421	H3024B04	"Mus musculus chaperonin subunit 3 (gamma) (Cct3), mRNA"		BG064812	Mm.3576	Heat Shock/Stress
1422						
1423	H3024B05	"Mus musculus chaperonin subunit 3 (gamma) (Cct3), mRNA"		BG064813	Mm.3576	Heat Shock/Stress
1424						
1425	H3024B06	"Mus musculus chaperonin subunit 3 (gamma) (Cct3), mRNA"		BG064814	Mm.3576	Heat Shock/Stress
1426						
1427	H3024B12					Heat Shock/Stress

1428	H3024C02	"Homo sapiens oxidative-stress responsive 1 (OSR1), mRNA"			BG078151	Mm.52786	Heat Shock/Stress
1429							
1430	H3024C04	phosphoglycerate mutase 1 (Pgml)	Mus musculus phosphoglycerate mutase 1 (Pgml) mRNA, complete cds		BG064823	Mm.16783	Energy/Metabolism
1431							
1432	H3024C07	HEXA gene, exons 2 - 14	M.musculus HEXA gene, exons 2 - 14		BG064825	Mm.2284	Energy/Metabolism
1433							
1434	H3024C11	"Mus musculus heat shock protein, 86 kDa 1 (Hsp86-1), mRNA"			BG064829	Mm.1843	Heat Shock/Stress
1435							
1436	H3024E08	direct IAP binding protein with low PI	Mus musculus direct IAP binding protein with low PI mRNA, complete cds		BG064850	Mm.46716	Apoptosis
1437							
1438	H3024F05	Mus musculus putative CCAAT binding factor 1 (mCBF) mRNA, alternatively spliced transcript mCBF1, complete cds			BG064857	Mm.24169	Transcription/Chromatin
1439							
1440	H3024F06	serine hydroxymethyl transferase 1 (soluble) (Shmt1),	Mus musculus serine hydroxymethyl transferase 1 (soluble) (Shmt1), mRNA		BG078187	Mm.45993	Energy/Metabolism
1441							
1442	H3024F07	fumarate hydratase (FH),	Homo sapiens fumarate hydratase (FH), mRNA		BG064859	Mm.41502	Energy/Metabolism
1443							
1444	H3024G02	phosphoribosyl pyrophosphate synthetase 1 (Prps1),	Mus musculus phosphoribosyl pyrophosphate synthetase 1 (Prps1), mRNA		BG064866	Mm.25198	Energy/Metabolism
1445							
1446	H3024G03	K+- channel, sequence	Rattus norvegicus K+- channel mRNA, sequence		BG078196	Mm.40482	Energy/Metabolism
1447							
1448	H3024G07	Murine L-myc gene			BG064871	Mm.1055	Signal Transduction
1449							
1450	H3024H02	"Mus musculus p53 binding protein 1 mRNA, partial cds"			BG078205	Mm.25231	Signal Transduction
1451							

1452		"Mus musculus breast heat shock 73						
1453	H3024H12	protein (hsc73) mRNA, complete cds"				BG064886	Mm.2944	Heat Shock/Stress
1454		"Mus musculus interferon alpha						
1455	H3025A01	responsive protein (15 kDa) (Ifg15), mRNA"				BG078215	Mm.21761	Heat Shock/Stress
1456								
1457	H3025C05	malate dehydrogenase, soluble (Mor2),			Mus musculus malate dehydrogenase, soluble (Mor2), mRNA	BG064914	Mm.3156	Energy/Metabolism
1458								
1459	H3025D10	Aga=aspartylglucosaminidase [mice, liver, brain, Partial, 1191 nt]			Aga=aspartylglucosaminidase [mice, liver, brain, mRNA Partial, 1191 nt]	BG064929	Mm.41591	Energy/Metabolism
1460								
1461	H3025E07	ADP-ribosylarginine hydrolase			Mus musculus ADP-ribosylarginine hydrolase mRNA, complete cds	BG064935	Mm.20047	Energy/Metabolism
1462								
1463	H3025F10	succinate dehydrogenase Ip subunit, partial cds			Mus musculus succinate dehydrogenase Ip subunit mRNA, partial cds	BG064949	Mm.29141	Energy/Metabolism
1464								
1465	H3026B03	HSPC145 protein (HSPC145),			Homo sapiens HSPC145 protein (HSPC145), mRNA		Mm.29904	
1466								
1467	H3026B04	phosphoribosyl pyrophosphate amidotransferase (PPAT),			Homo sapiens phosphoribosyl pyrophosphate amidotransferase (PPAT), mRNA	BG064988	Mm.27743	Energy/Metabolism
1468								
1469	H3026B06	Mm.100588					Mm.100588	Energy/Metabolism
1470								
1471	H3026B07	ADP-ribosylation factor 1 (Arl1),			Mus musculus ADP-ribosylation factor 1 (Arl1), mRNA	BG078294	Mm.6836	Energy/Metabolism
1472								
1473	H3026B11	ATPase, Cu++ transporting, beta polypeptide (Atp7b), mRNA			Mus musculus ATPase, Cu++ transporting, beta polypeptide (Atp7b), mRNA	BG078297	Mm.102506	Energy/Metabolism

1474	H3026D06	tyrosine 3-monooxygenase/tryptophan 5-monooxygenase activation protein, eta polypeptide (Ywhah),	Mus musculus tyrosine 3-monooxygenase/tryptophan 5-monooxygenase activation protein, eta polypeptide (Ywhah), mRNA	BG065012	Mm.3308	Energy/Metabolism
1476	H3026D10	"Mus musculus heat shock protein, DNAAJ-like 2 (Hsj2), mRNA"		BG065015	Mm.27897	Heat Shock/Stress
1478	H3026E07	cDNA FLJ12225 fis, clone MAMMA1001139, weakly similar to SRE-2 PROTEIN	Homo sapiens cDNA FLJ12225 fis, clone MAMMA1001139, weakly similar to SRE-2 PROTEIN	BG078316	Mm.12983	Energy/Metabolism
1480	H3026F02	M.musculus GSHPx gene	M.musculus GSHPx gene	BG065030	Mm.1090	Energy/Metabolism
1482	H3026F05	acetyl-Coenzyme A dehydrogenase, short chain (Acads),	Mus musculus acetyl-Coenzyme A dehydrogenase, short chain (Acads), mRNA	BG065033	Mm.18759	Energy/Metabolism
1484	H3026F06	H.sapiens phosphoenolpyruvate carboxykinase	H.sapiens mRNA for phosphoenolpyruvate carboxykinase	BG078326	Mm.29856	Energy/Metabolism
1486	H3026F07	"Mus musculus Ccch gene for chaperonin containing TCP-1 eta subunit, complete cds"		BG065035	Mm.914	Heat Shock/Stress
1488	H3026F08	"Mus musculus Ccch gene for chaperonin containing TCP-1 eta subunit, complete cds"		BG065036	Mm.914	Heat Shock/Stress
1490	H3026G10	mannose phosphate isomerase (MPI),	Homo sapiens mannose phosphate isomerase (MPI), mRNA	BG078342	Mm.34830	Energy/Metabolism
1492	H3026H09	methionine adenosyltransferase alpha subunit gene fragment	Homo sapiens methionine adenosyltransferase alpha subunit gene fragment	BG065061	Mm.29815	Energy/Metabolism

1494	H3026H11	puromycin-sensitive aminopeptidase (Psa), mRNA	Mus musculus puromycin-sensitive aminopeptidase (Psa), mRNA	BG065063	Mm.29824	Energy/Metabolism
1495						
1496	H3027A10	ATPase-like vacuolar proton channel (Atp1)	Mus musculus ATPase-like vacuolar proton channel (Atp1), mRNA	BG065073	Mm.30155	Energy/Metabolism
1497						
1498	H3027B02	"Homo sapiens SH3-domain binding protein 4 (SH3BP4), mRNA"		BG078369	Mm.62046	Signal Transduction
1499						
1500	H3027C06	transient receptor potential-related protein (Chak), mRNA	Mus musculus transient receptor potential-related protein (Chak), mRNA	BG065092	Mm.33819	Energy/Metabolism
1501						
1502	H3027E05	uridine phosphorylase (Upp), mRNA	Mus musculus uridine phosphorylase (Upp), mRNA	BG065114	Mm.4610	Energy/Metabolism
1503						
1504	H3027E07	alpha-enolase (2-phospho-D-glycerate hydrolase) (EC 4.2.1.11)	Mouse mRNA for alpha-enolase (2-phospho-D-glycerate hydrolase) (EC 4.2.1.11)	BG078408	Mm.90587	Energy/Metabolism
1505						
1506	H3027E08	alpha-enolase (2-phospho-D-glycerate hydrolase) (EC 4.2.1.11)	Mouse mRNA for alpha-enolase (2-phospho-D-glycerate hydrolase) (EC 4.2.1.11)	BG078409	Mm.90587	Energy/Metabolism
1507						
1508	H3027E09	alpha-enolase (2-phospho-D-glycerate hydrolase) (EC 4.2.1.11)	Mouse mRNA for alpha-enolase (2-phospho-D-glycerate hydrolase) (EC 4.2.1.11)	BG078410	Mm.90587	Energy/Metabolism
1509						
1510	H3027F02	aspartyl-tRNA synthetase (DARS), mRNA	Homo sapiens aspartyl-tRNA synthetase (DARS), mRNA	BG078414	Mm.28693	Energy/Metabolism
1511						
1512	H3027F07	"Murine MAP kinase kinase 6c mRNA, complete cds"		BG065128	Mm.14487	Signal Transduction
1513						
1514	H3027F12	"Mus musculus Cctd gene for chaperonin containing TCP-1 delta subunit, complete cds"		BG078424	Mm.6821	Heat Shock/Stress
1515						

1516	H3027H04	"Homo sapiens heat shock protein 75 (TRAP1), mRNA"		BG078439	Mm.38470	Heat Shock/Stress
1517						
1518	H3028A03	peptidylprolyl isomerase A (Ppia),	Mus musculus peptidylprolyl isomerase A (Ppia), mRNA	BG078450	Mm.5246	Energy/Metabolism
1519						
1520	H3028A04	peptidylprolyl isomerase A (Ppia),	Mus musculus peptidylprolyl isomerase A (Ppia), mRNA	BG078451	Mm.5246	Energy/Metabolism
1521						
1522	H3028A09	BTB and CNC homology 2 (Bach2),	Mus musculus BTB and CNC homology 2 (Bach2), mRNA	BG065166	Mm.21908	Energy/Metabolism
1523						
1524						
1525	H3028B03	adenine nucleotide translocase-2 (Ant2)	Mus musculus adenine nucleotide translocase-2 (Ant2) mRNA, complete cds		Mm.658	Energy/Metabolism
1526						
1527	H3028C09	"Mus musculus adenosine kinase (Adk), mRNA"		BG065190	Mm.19352	Signal Transduction
1528						
1529	H3028E01	death associated protein 3 (DAP-3 gene)	Mus musculus mRNA for death associated protein 3 (DAP-3 gene)	BG078504	Mm.29028	Apoptosis
1530						
1531	H3028E04	"Mus musculus protein phosphatase 2 (formerly 2A), regulatory subunit A (PR 65), alpha isoform (Ppp2r1a), mRNA"		BG078507	Mm.1034	Signal Transduction
1532						
1533	H3028F04	"Mus musculus cathepsin L (Ctsl), mRNA"		BG078497	Mm.930	Signal Transduction
1534						
1535	H3028F05	kidney ornithine decarboxylase, clone pODC16, 3 end	Mouse kidney ornithine decarboxylase mRNA, clone pODC16, 3 end	BG065221	Mm.15259	Energy/Metabolism
1536						
1537	H3028F06	"Mus musculus RAB17, member RAS oncogene family (Rab17), mRNA"		BG078499	Mm.46396	Signal Transduction
1538						
1539	H3028H11	"Mus musculus cathepsin H (CtsH), mRNA"		BG065250	Mm.2277	Signal Transduction

1540		peroxisomal trans 2-enoyl CoA reductase	Mus musculus peroxisomal trans 2-enoyl CoA reductase mRNA, complete cds	BG065254	Mm.29988	Energy/Metabolism
1541	H3029A03					
1542			Mus musculus cellular apoptosis susceptibility protein mRNA, complete cds	BG065256	Mm.22417	Apoptosis
1543	H3029A05	cellular apoptosis susceptibility protein				
1544		natural resistance associated macrophage protein-2 (Nramp2), C-terminal exon alternative splice variant	Mus musculus natural resistance associated macrophage protein-2 (Nramp2) mRNA, C-terminal exon alternative splice variant, complete cds	BG065264	Mm.1304	Energy/Metabolism
1545	H3029B01					
1546		"Mus musculus chaperonin subunit 3 (gamma) (Cet3), mRNA"		BG078552	Mm.27804	Heat Shock/Stress
1547	H3029B02					
1548		NADH dehydrogenase (ubiquinone) 1, subcomplex unknown, 2 (14.5kD, B14.5b) (NDUFC2),	Homo sapiens NADH dehydrogenase (ubiquinone) 1, subcomplex unknown, 2 (14.5kD, B14.5b) (NDUFC2), mRNA	BG078565	Mm.1893	Energy/Metabolism
1549	H3029C05					
1550						Heat Shock/Stress
1551	H3029C06					
1552		"Mus musculus Son of sevenless homolog 1, (Drosophila) (Sos1), mRNA"		BG065298	Mm.6357	Signal Transduction
1553	H3029E04					
1554		nuclear mitotic apparatus protein 1 (NUMA1),	Homo sapiens nuclear mitotic apparatus protein 1 (NUMA1), mRNA		Mm.102520	
1555	H3029G12					
1556	H3030A03	Mouse cDNA for heat shock protein 65		BG078626	Mm.1777	Heat Shock/Stress
1557						
1558	H3030B07				Mm.1776	Heat Shock/Stress
1559		"Mus musculus activin receptor IIB (Acvr2b), mRNA"				
1560	H3030C05			BG065366	Mm.8940	Signal Transduction

1561		"Mus musculus nucleoside diphosphate kinase A long form mRNA, complete cds"			BG078650	Mm.1260	Signal Transduction
1562	H3030C06						Energy/Metabolism
1563	H3030C11	H3030C11					
1564							
1565							
1566	H3030D10	pyruvate kinase M		Mus musculus mRNA for pyruvate kinase M ₁ complete cds	BG078663	Mm.2635	Energy/Metabolism
1567							
1568	H3030D11	pyruvate kinase M		Mus musculus mRNA for pyruvate kinase M ₂ complete cds	BG078664	Mm.2635	Energy/Metabolism
1569							
1570	H3030E04	Mm.26022				Mm.26022	Energy/Metabolism
1571							
1572	H3030E05	glycine decarboxylase (P-protein)		Human glycine decarboxylase (P-protein) mRNA	BG078669	Mm.27953	Energy/Metabolism
1573							
1574	H3030E06	glycine decarboxylase (P-protein)		Human glycine decarboxylase (P-protein) mRNA	BG078670	Mm.27953	Energy/Metabolism
1575							
1576	H3030E10	"Mus musculus cathepsin B (Ctsb), mRNA"			BG078674	Mm.22753	Signal Transduction
1577							
1578	H3030F09	Homo sapiens protein phosphatase 3 (formerly 2B), catalytic subunit, beta isoform (calcineurin A beta) (PPP3CB), mRNA			AW537455	Mm.142697	Matrix/Structural Proteins
1579							
1580	H3030G01	Cochlear (clone 20F5)		M.musculus partial cochlear mRNA (clone 20F5)	BG078685	Mm.43671	Energy/Metabolism
1581							
1582	H3030G08	ATP synthase alpha subunit		Mouse ATP synthase alpha subunit, complete cds	BG078689	Mm.4069	Energy/Metabolism
1583							
1584	H3030G09	"Mus musculus Ca ²⁺ -independent phospholipase A2 long form mRNA, complete cds"			BG065409	Mm.117103	Signal Transduction

1585	H3030H02	Bckdk		Mus musculus branched chain ketoacid dehydrogenase kinase (Bckdk), mRNA	BG078694	Mm.8903	Signal Transduction
1586							
1587	H3031A11	"Mus musculus protein kinase C substrate 80K-H (Prksh), mRNA"			BG078710	Mm.70272	Signal Transduction
1588							
1589	H3031B06	cytosolic aminopeptidase P		Homo sapiens cytosolic aminopeptidase P mRNA, complete cds	BG078715	Mm.99776	Energy/Metabolism
1590							
1591	H3031C05	PIS1 gene phosphatidylinositol synthase cds		Rattus norvegicus PIS1 gene for phosphatidylinositol synthase, complete cds	BG065447	Mm.28219	Energy/Metabolism
1592							
1593	H3031C09	"Mus musculus putative intracellular signaling protein (Trip6) mRNA, complete cds"			BG078729	Mm.27063	Signal Transduction
1594							
1595	H3031C12	Mus musculus N-myc downstream regulated 1 (Ndr1), mRNA			BG078732	Mm.4063	Transcription/Chromatin
1596							
1597	H3031D03	aldolase 1, A isom (Aldo1),		Mus musculus aldolase 1, A isoform (Aldo1), mRNA	BG065457	Mm.16763	Energy/Metabolism
1598							
1599	H3031E10	S-adenosylhomocysteine hydrolase (Ahey),		Mus musculus S-adenosylhomocysteine hydrolase (Ahey), mRNA	BG065475	Mm.2573	Energy/Metabolism
1600							
1601	H3031E11	glyceraldehyde-3-phosphate dehydrogenase (Gapd),		Mus musculus glyceraldehyde-3-phosphate dehydrogenase (Gapd), mRNA	BG065476	Mm.5289	Energy/Metabolism
1602							
1603	H3031E12	fatty acid desaturase 1 (FADS1),		Homo sapiens fatty acid desaturase 1 (FADS1), mRNA	BG078755	Mm.30158	Energy/Metabolism
1604							
1605	H3031F01	ubiquinol-cytochrome c reductase core protein I (UQCRC1),		Homo sapiens ubiquinol-cytochrome c reductase core protein I (UQCRC1), mRNA	BG065478	Mm.972	Energy/Metabolism
1606							

1607	H3031F08	"Mus musculus heat shock protein 40 (HSPF1), mRNA"		BG065483	Mm.2982	Heat Shock/Stress
1608						
1609	H3031F12	M. musculus aspartate aminotransferase gene exon 10 and 3-flank	M. musculus aspartate aminotransferase gene exon 10 and 3-flank	BG078765	Mm.149089	Energy/Metabolism
1610						
1611						
1612	H3031G06	"Mus musculus heat shock protein, 110 kDa (Hsp110), mRNA"		BG065493	Mm.1032	Heat Shock/Stress
1613						
1614	H3031G08	Mm.93266			Mm.93266	Energy/Metabolism
1615						
1616	H3031G11	ATPase, H ⁺ transporting, lysosomal (vacuolar proton pump) 9kD (ATP6H),	Homo sapiens ATPase, H ⁺ transporting, lysosomal (vacuolar proton pump) 9kD (ATP6H), mRNA	BG078776	Mm.22602	Energy/Metabolism
1617						
1618	H3031H09	5-3 exoribonuclease 2 (Xrn2),	Mus musculus 5-3 exoribonuclease 2 (Xrn2), mRNA	BG065507	Mm.3065	Energy/Metabolism
1619						
1620	H3032A01	hypothetical protein PRO1197	Homo sapiens hypothetical protein PRO1197 (PRO1197), mRNA	BG065511	Mm.24565	Energy/Metabolism
1621						
1622	H3032A08	"Mus musculus heat shock 70kD protein 5 (glucose-regulated protein, 78kD) (Hspa5), mRNA"		BG078795	Mm.918	Heat Shock/Stress
1623						
1624	H3032A09	peroxisomal integral membrane protein PMP34	Mus musculus mRNA for peroxisomal integral membrane protein PMP34		Mm.306	Matrix/Structural Proteins
1625						
1626	H3032A12	glucose-6-phosphate dehydrogenase X-linked (G6pdx),	Mus musculus glucose-6-phosphate dehydrogenase X-linked (G6pdx), mRNA	BG078799	Mm.27210	Energy/Metabolism
1627						
1628	H3032C01	cytochrome c gene (MCI)	Mouse cytochrome c gene (MCI)	BG078810	Mm.35389	Energy/Metabolism

1629	H3032C10	3-hydroxy-3-methylglutaryl-Coenzyme A reductase (HMGCR),	Homo sapiens 3-hydroxy-3-methylglutaryl-Coenzyme A reductase (HMGCR), mRNA	BG078816	Mm.2226	Energy/Metabolism
1630						
1631	H3032H02	phosphatidylcholine transfer protein-like (Pctpl),	Mus musculus phosphatidylcholine transfer protein-like (Pctpl), mRNA	BG078855	Mm.28896	Energy/Metabolism
1632						
1633	H3033A10	R. norvegicus gene 6-phosphofructo-2-kinase/fructose-2,6-biphosphatase (EC 2.7.1.105/EC 3.1.3.46)	R. norvegicus gene for 6-phosphofructo-2-kinase/fructose-2,6-biphosphatase (EC 2.7.1.105/EC 3.1.3.46)	BG078872		Energy/Metabolism
1634						
1635	H3033B08	cytochrome c oxidase, subunit IV (Cox4),	Mus musculus cytochrome c oxidase, subunit IV (Cox4), mRNA	BG078879	Mm.2136	Energy/Metabolism
1636						
1637	H3033B11	serine protease inhibitor 3 (Spi3),	Mus musculus serine protease inhibitor 3 (Spi3), mRNA	BG078882	Mm.147649	Energy/Metabolism
1638						
1639	H3033C02	"Mus musculus serine/threonine kinase (sak-a) mRNA, complete cds"		BG078885	Mm.3794	Signal Transduction
1640						
1641	H3033E10	ectonucleotide pyrophosphatase/phosphodiesterase 1 (Enpp1),	Mus musculus ectonucleotide pyrophosphatase/phosphodiesterase 1 (Enpp1), mRNA	BG065640	Mm.27254	Energy/Metabolism
1642						
1643	H3034B11	ATP-binding cassette, sub-family B (MDR/TAP), member 12 ABC-me			Mm.143731	Energy/Metabolism
1644						
1645	H3035A01	tumor necrosis factor, alpha-induced protein 2 (Tnfai2),	Mus musculus tumor necrosis factor, alpha-induced protein 2 (Tnfai2), mRNA	BG065761	Mm.4348	Apoptosis
1646						
1647	H3035B03	Mm.32746			Mm.32746	Energy/Metabolism
1648						
1649	H3035D08	Mouse gene for beta-2-adrenergic receptor		BG079067	Mm.5598	Signal Transduction
1650						

1651			"Mus musculus RNA-binding protein isoform G3BP-2a (G3BP2) mRNA, complete cds"			BG065817	Mm.2411	Signal Transduction
1652	H3035F02							
1653			"Mus musculus Rho guanine nucleotide exchange factor (GEF) 1 (Arhgef1), mRNA"			BG079136	Mm.3181	Signal Transduction
1654	H3036B11							
1655			"Mus musculus lysophosphatidic acid receptor (vzg-1) mRNA, complete cds"			BG079186	Mm.4772	Signal Transduction
1656	H3036H01							
1657			kinesin-like 6 (mitotic centromere-associated kinesin) (KNSL6),		Homo sapiens kinesin-like 6 (mitotic centromere-associated kinesin) (KNSL6), mRNA			
1658	H3037B01						Mm.27828	Cell Cycle
1659			serine protease inhibitor, Kunitz type 1 (Spint1),		Mus musculus serine protease inhibitor, Kunitz type 1 (Spint1), mRNA	BG079254	Mm.104955	Energy/Metabolism
1660	H3037F06							
1661			"Mus musculus cAMP-specific phosphodiesterase 4A (Pde4a) gene, exons 2 through 8 and PDE4A isoform			BG066005	Mm.154704	Signal Transduction
1662	H3037G12		1 exon 1"					
1663			"Mus musculus interferon alpha responsive protein (15 kDa) (Ifrg15), mRNA"			BG079287	Mm.21761	Heat Shock/Stress
1664	H3038A06							
1665			potassium voltage-gated channel, delayed-rectifier, subfamily S, member		Homo sapiens potassium voltage-gated channel, delayed-rectifier, subfamily S, member 3 (KCNS3), mRNA			
1666	H3038C073		(KCNS3),			BG079311	Mm.113278	Energy/Metabolism
1667			phosphoribosyl pyrophosphate synthetase-associated protein 2		Homo sapiens phosphoribosyl pyrophosphate synthetase-associated protein 2 (PRPSAP2), mRNA			
1668	H3038C09		(PRPSAP2),			BG079313	Mm.27703	Energy/Metabolism

1669	H3038E03	PRKC, apoptosis, WT1, regulator	Homo sapiens PRKC, apoptosis, WT1, regulator (PAWR), mRNA	BG079331	Mm.6617	Apoptosis
1670						
1671	H3038E05	Mus musculus growth differentiation factor 3 (Gdf3), mRNA		BG079333	Mm.4213	Signal Transduction
1672						
1673	H3038E10	methy/transferase COQ3 (COQ3),	Homo sapiens methyltransferase COQ3 (COQ3), mRNA	BG066071	Mm.5662	Energy/Metabolism
1674						
1675	H3039A05	"Mus musculus regulator of G-protein signaling 11 mRNA, partial cds"		BG079374	Mm.13264	Signal Transduction
1676						
1677	H3039B09	"Mus musculus serine/threonine kinase receptor associated protein (Strap), mRNA"		BG066121	Mm.22584	Signal Transduction
1678						
1679	H3039C11	"Mus musculus receptor tyrosine kinase (Dtk) mRNA, complete cds"		BG066134	Mm.2901	Signal Transduction
1680						
1681	H3039D02	asparaginyl-tRNA synthetase (NARS),	Homo sapiens asparaginyl-tRNA synthetase (NARS), mRNA	BG079401	Mm.29192	Energy/Metabolism
1682						
1683	H3039E07	isocitrate dehydrogenase 3 (NAD+) beta 3 (IDH3B),	Homo sapiens isocitrate dehydrogenase 3 (NAD+) beta (IDH3B), mRNA	C78231	Mm.29590	Energy/Metabolism
1684						
1685	H3039E08	"Mus musculus SH3-containing protein SH3P2 mRNA, partial cds"		BG079417	Mm.4165	Signal Transduction
1686						
1687	H3039F05	ornithine aminotransferase (Oat),	Mus musculus ornithine aminotransferase (Oat), mRNA	BG079424	Mm.42187	Energy/Metabolism
1688						
1689	H3039G04	M.musculus seryl-tRNA synthetase (SERS), 5 end	M.musculus seryl-tRNA synthetase (SERS) mRNA, 5 end	BG079434	Mm.28688	Energy/Metabolism
1690						

1691				Mus musculus 5-3 exoribonuclease 1 (Xrn1), mRNA	BG079441	Mm.5703	Energy/Metabolism
1692	H3039G12	5-3 exoribonuclease 1 (Xrn1),					
1693	H3039H01	"Mus musculus calponin 2 (Cnn2), mRNA"			BG079442	Mm.21776	Signal Transduction
1694							
1695			Mus musculus putative CCAAT binding factor 1 (mCBF) mRNA, alternatively spliced transcript mCBF1, complete cds				
1696	H3039H05				BG079446	Mm.24169	
1697				Mouse adenine phosphoribosyltransferase (APRT), complete cds			
1698	H3040A04	adenine phosphoribosyltransferase (APRT)			BG079455	Mm.1786	Energy/Metabolism
1699				Mus musculus palmitoyl-protein thioesterase (Ppt), mRNA		Mm.153740	
1700	H3040E11	palmitoyl-protein thioesterase (Ppt),					
1701				Homo sapiens NADH dehydrogenase (ubiquinone) 1 alpha subcomplex, 10 (42kD) (NDUFA10), mRNA			
1702	H3041A02	NADH dehydrogenase (ubiquinone) 1 alpha subcomplex, 10 (42kD) (NDUFA10),			BG079485	Mm.28293	Energy/Metabolism
1703				Homo sapiens lysyl-tRNA synthetase (KARS), mRNA		Mm.29949	Energy/Metabolism
1704	H3041A04	lysyl-tRNA synthetase (KARS),			BG066271		
1705				Rattus norvegicus mevalonate pyrophosphate decarboxylase mRNA, complete cds			
1706	H3041B11	mevalonate pyrophosphate decarboxylase			BG079503	Mm.28146	Energy/Metabolism
1707				Mus musculus mRNA for glucose transporter (GLUTX1 gene)			
1708	H3041F09	glucose transporter (GLUTX1 gene)			BG066327	Mm.7241	Energy/Metabolism
1709				Mus musculus solute carrier family 15 (H+/peptide transporter), member 2 (Slc15a2), mRNA			
1710	H3041G03	solute carrier family 15 (H+/peptide transporter), member 2 (Slc15a2),			BG079545	Mm.63479	Energy/Metabolism

1711									
1712	H3041G08	protease (prosome, macropain) 26S subunit, ATPase 5 (Psmc5), mRNA	Mus musculus protease (prosome, macropain) 26S subunit, ATPase 5 (Psmc5), mRNA	BG079550	Mm.665			Energy/Metabolism	
1713									
1714	H3041H03	major histocompatibility complex region NG27, NG28, RPS28, NADH oxidoreductase, NG29, KIFC1, Fas-binding protein, BING1, tapasin, RalGDS-like, KE2, BING4, beta 1,3-galactosyl transferase	Mus musculus major histocompatibility complex region NG27, NG28, RPS28, NADH oxidoreductase, NG29, KIFC1, Fas-binding protein, BING1, tapasin, RalGDS-like, KE2, BING4, beta 1,3-galactosyl transferase	BG079557	Mm.14808			Energy/Metabolism	
1715									
1716	H3042A05	BCL2-associated athanogene 4 (BAG4), mRNA	Homo sapiens BCL2-associated athanogene 4 (BAG4), mRNA	BG066354	Mm.27102			Apoptosis	
1717									
1718	H3042C08	"Mus musculus dual specificity phosphatase 10 (Dusp10), mRNA"		BG079592	Mm.34912			Signal Transduction	
1719									
1720	H3042D02	brain cDNA, clone MNCb-2243, similar to Bcl2-associated athanogene 3 (Bag3), mRNA	Mus musculus brain cDNA, clone MNCb-2243, similar to Mus musculus Bcl2-associated athanogene 3 (Bag3), mRNA	BG079597	Mm.28373			Apoptosis	
1721									
1722	H3042F12	serine protease inhibitor 4 (Spi4), mRNA	Mus musculus serine protease inhibitor 4 (Spi4), mRNA	BG079624	Mm.3093			Energy/Metabolism	
1723									
1724	H3042G07	Mouse heat-shock protein hsp84 mRNA		BG079631	Mm.2180			Heat Shock/Stress	
1725									
1726	H3043A03	"Mus musculus casein kinase II, alpha 1, related sequence 4 (Csnk2a1-rs4), mRNA"		BG066436	Mm.23692			Signal Transduction	
1727									
1728	H3043F09	Mus musculus GNB3 gene for GTP-binding protein beta3 subunit, complete cds		BG066499	Mm.22228				
1729									
1730	H3043F12	ferrochelatase (Fech), mRNA	Mus musculus ferrochelatase (Fech), mRNA	BG066502	Mm.1070				

1731			"Mus musculus Cctd gene for chaperonin containing TCP-1 delta subunit, complete cds"						
1732	H3044B01						BG079699	Mm.36431	Heat Shock/Stress
1733									
1734	H3044E06		protease (prosome, macropain) 28 subunit, alpha (Psmel), mRNA				BG066650	Mm.830	Energy/Metabolism
1735									
1736	H3044G06		A10, partial cds				BG066673	Mm.16898	Energy/Metabolism
1737									
1738	H3045B02		cytosolic aminopeptidase P				BG079790	Mm.99776	Energy/Metabolism
1739									
1740	H3045B03		Mm.23710					Mm.23710	Energy/Metabolism
1741									
1742	H3045B12		solute carrier family 12, member 7 (Slc12a7), mRNA				BG079799	Mm.155195	Energy/Metabolism
1743									
1744	H3045D07		NAALADase II protein				BG079815	Mm.7060	Energy/Metabolism
1745									
1746	H3045D08		Mm.25054					Mm.25054	Energy/Metabolism
1747									
1748	H3045E05		serine protease OMI (Omi),				BG079822	Mm.21880	Energy/Metabolism
1749									
1750	H3046A03		DKFZP566O084 protein (DKFZP566O084),				BG079861	Mm.21475	Energy/Metabolism
1751									
1752	H3046A12		programmed cell death protein 7 (Pdcd7),				BG066710	Mm.29193	Apoptosis
1753									
1754	H3046C10		isopentenyl-diphosphate delta isomerase (IDI1),				BG079889	Mm.29847	Energy/Metabolism
1755									
1756	H3047B07		tripeptidyl peptidase II (Tpp2),				BG066807	Mm.28867	Energy/Metabolism

1757	H3047D01	Bos taurus creatine kinase	Bos taurus mRNA for creatine kinase, complete cds	BG079988	Mm.970	Energy/Metabolism
1758	H3047D05	gene encoding enoyl-CoA hydratase, exons 5, 6 & 7	H. sapiens gene encoding enoyl-CoA hydratase, exons 5, 6 & 7	BG079992	Mm.24452	Energy/Metabolism
1761	H3047F02	vacuolar-adenosine triphosphatase (V-ATPase)	Mus musculus mRNA for vacuolar-adenosine triphosphatase (V-ATPase), complete cds	BG079910	Mm.25079	Energy/Metabolism
1763	H3047G12	C7-1 protein (C7-1)	Rattus norvegicus C7-1 protein (C7-1) mRNA, complete cds	C80679	Mm.21961	Energy/Metabolism
1765	H3048A05	isoprenylcysteine carboxyl methyltransferase (ICMT),	Homo sapiens isoprenylcysteine carboxyl methyltransferase (ICMT), mRNA	BG080028	Mm.44565	Energy/Metabolism
1767	H3048B11	cytochrome c oxidase, subunit VIIc (Cox7c),	Mus musculus cytochrome c oxidase, subunit VIIc (Cox7c), mRNA	BG080036	Mm.24165	Energy/Metabolism
1769	H3048E06	small zinc finger-like protein DDP2	Mus musculus small zinc finger-like protein DDP2 (Ddp2) mRNA, complete cds	BG080049	Mm.30718	Energy/Metabolism
1771	H3048G11	biliverdin reductase B (flavin reductase (NADPH)) (BLVRB),	Homo sapiens biliverdin reductase B (flavin reductase (NADPH)) (BLVRB), mRNA	BG066946	Mm.24021	Energy/Metabolism
1773	H3049D07	"Mus musculus Janus kinase 2 (Jak2), mRNA"		BG080085	Mm.25112	Signal Transduction
1775	H3049F02	carbonyl reductase 3 (CBR3),	Homo sapiens carbonyl reductase 3 (CBR3), mRNA	BG067014	Mm.4512	Energy/Metabolism
1777	H3049G02	solute carrier family 16 (monocarboxylic acid transporters), member 1 (Slc16a1),	Mus musculus solute carrier family 16 (monocarboxylic acid transporters), member 1 (Slc16a1), mRNA	BG067025	Mm.9086	Energy/Metabolism
1779	H3049G04	"Mus musculus B-cell leukemia/lymphoma 10 (Bcl10), mRNA"		BG067027	Mm.28782	Signal Transduction

1781				Mus musculus PGES mRNA for prostaglandin E synthase, complete cds	BG067030	Mm.154682	Energy/Metabolism
1782	H3049G07	PGES prostaglandin E synthase		Mus musculus mannosidase 1, beta (Man1b), mRNA	BG080131	Mm.103874	Energy/Metabolism
1783							
1784	H3050A12	mannosidase 1, beta (Man1b),					
1785							
1786	H3050B11	small zinc finger-like protein (Tim13)		Mus musculus small zinc finger-like protein (Tim13) mRNA, complete cds	BG080141	Mm.142132	Energy/Metabolism
1787							
1788	H3050C02	glutathione synthetase (Gss),		Mus musculus glutathione synthetase (Gss), mRNA	BG067069	Mm.7504	Energy/Metabolism
1789							
1790	H3050E05	putative dimethyladenosine transferase (HSA9761),		Homo sapiens putative dimethyladenosine transferase (HSA9761), mRNA	BG080168	Mm.9563	Energy/Metabolism
1791							
1792	H3050E08	diaphorase (NADH) (cytochrome b-5 reductase) (DIA1),		Homo sapiens diaphorase (NADH) (cytochrome b-5 reductase) (DIA1), mRNA	BG080169	Mm.22560	Energy/Metabolism
1793							
1794	H3050F12	hydroxysteroid 17-beta dehydrogenase 4 (Hsd17b4),		Mus musculus hydroxysteroid 17-beta dehydrogenase 4 (Hsd17b4), mRNA	BG080183	Mm.9569	Energy/Metabolism
1795							
1796	H3050G05	solute carrier family 7 (cationic amino acid transporter, y+ system), member 2 (Slc7a2),		Mus musculus solute carrier family 7 (cationic amino acid transporter, y+ system), member 2 (Slc7a2), mRNA	BG067114	Mm.4676	Energy/Metabolism
1797							
1798	H3050H06	"Mus musculus interferon regulatory factor 1 (Irf1), mRNA"			BG067127	Mm.1246	Heat Shock/Stress
1799							
1800	H3050H11	Mm.25374				Mm.25374	Energy/Metabolism
1801							
1802	H3051C06					Mm.7730	Heat Shock/Stress
1803							
1804	H3051C07	"Mus musculus phospholipase D2 gene, exons 13 through 25 and complete cds"			BG080231	Mm.2538	Signal Transduction

1805		cDNA FLJ13488 fis, clone PLACE1003915, weakly similar to PROBABLE ARGINYL-TRNA SYNTHETASE, CYTOPLASMIC (EC 6.1.1.19)	Homo sapiens cDNA FLJ13488 fis, clone PLACE1003915, weakly similar to PROBABLE ARGINYL-TRNA SYNTHETASE, CYTOPLASMIC (EC 6.1.1.19)	BG080243	Mm.22363	
1806	H3051D07	aldehyde reductase 6, renal (Aldr6r-pending), mRNA	Mus musculus aldehyde reductase 6, renal (Aldr6r-pending), mRNA	BG080253	Mm.21268	Energy/Metabolism
1807	H3051E06	Mus musculus growth differentiation factor 9 (Gdf9), mRNA		BG080261	Mm.9593	Signal Transduction
1808	H3051F02	guanosine monophosphate reductase (GMPR), mRNA	Homo sapiens guanosine monophosphate reductase (GMPR), mRNA	BG080277	Mm.25808	Energy/Metabolism
1809	H3051G07	potassium channel regulator 1	Rattus norvegicus potassium channel regulator 1 mRNA, complete cds	BG067226		Energy/Metabolism
1810	H3052A03	malate dehydrogenase, soluble (Mor2), mRNA	Mus musculus malate dehydrogenase, soluble (Mor2), mRNA	BG067227	Mm.3156	Energy/Metabolism
1811	H3052A04	ATP-binding cassette, sub-family B (MDR/TAP), member 1 (Abcb1), mRNA	Mus musculus ATP-binding cassette, sub-family B (MDR/TAP), member 1 (Abcb1), mRNA	BG080311	Mm.6404	Energy/Metabolism
1812	H3052B06	coproporphyrinogen oxidase (Cpo), mRNA	Mus musculus coproporphyrinogen oxidase (Cpo), mRNA	BG080324	Mm.35820	Energy/Metabolism
1813	H3052C08	"Mus musculus adenylate kinase 2" (Ak2), mRNA		BG067269	Mm.29460	Signal Transduction
1814	H3052D11					

1823 1824	H3052H05	"Homo sapiens rab3 GTPase-activating protein, non-catalytic subunit (150kD) (RAB3-GAP150), mRNA"		BG080373	Mm.28344	Signal Transduction
1825 1826	H3052H11	asparaginyl-tRNA synthetase (NARS), mRNA	Homo sapiens asparaginyl-tRNA synthetase (NARS), mRNA	BG080379	Mm.29192	Energy/Metabolism
1827 1828	H3053A12	"Mus musculus regulator of G-protein signaling 2 mRNA, complete cds"		BG080390	Mm.28262	Signal Transduction
1829 1830	H3053B07	tyrosine hydroxylase (Th), mRNA	Mus musculus tyrosine hydroxylase (Th), mRNA	BG067326	Mm.140599	Energy/Metabolism
1831 1832	H3053C02	phosphoribosyl pyrophosphate synthetase-associated protein 1 (PRPSAP1), mRNA	Homo sapiens phosphoribosyl pyrophosphate synthetase-associated protein 1 (PRPSAP1), mRNA	BG080402	Mm.25125	Energy/Metabolism
1833 1834	H3053C09	"Mus musculus nicotinic acetylcholine receptor alpha 5 subunit (Acr5) mRNA, partial cds"		BG080409		Signal Transduction
1835 1836	H3053E04	"Mus musculus calponin 1 (Cnn1), mRNA"		BG067357	Mm.4356	Signal Transduction
1837 1838	H3053G12	"Mus musculus polynucleotide kinase 3'-phosphatase (Pnkp), mRNA"		BG067384	Mm.29545	Signal Transduction
1839 1840	H3053H06	citrin (Slc25a13) mRNA, complete cds	Mus musculus citrin (Slc25a13) mRNA, complete cds	BG083930	Mm.2124	Energy/Metabolism
1841 1842	H3054B05	"Mus musculus folate receptor 3 (Folbp3) mRNA, complete cds"		BG080476	Mm.86738	Signal Transduction
1843 1844	H3054B12	Nrf2	Mus musculus p45 NF-E2 related factor 2 (Nrf2) mRNA, complete cds	BG067417	Mm.1025	

1823 1824	H3052H05	"Homo sapiens rab3 GTPase-activating protein, non-catalytic subunit (150kD) (RAB3-GAP150), mRNA"		BG080373	Mm.28344	Signal Transduction
1825 1826	H3052H11	Homo sapiens asparaginyl-tRNA synthetase (NARS), mRNA		BG080379	Mm.29192	Energy/Metabolism
1827 1828	H3053A12	"Mus musculus regulator of G-protein signaling 2 mRNA, complete cds"		BG080390	Mm.28262	Signal Transduction
1829 1830	H3053B07	tyrosine hydroxylase (Th), mRNA	Mus musculus tyrosine hydroxylase (Th), mRNA	BG067326	Mm.140599	Energy/Metabolism
1831 1832	H3053C02	phosphoribosyl pyrophosphate synthetase-associated protein 1 (PRPSAP1), mRNA	Homo sapiens phosphoribosyl pyrophosphate synthetase-associated protein 1 (PRPSAP1), mRNA	BG080402	Mm.25125	Energy/Metabolism
1833 1834	H3053C09	"Mus musculus nicotinic acetylcholine receptor alpha 5 subunit (Acr5) mRNA, partial cds"		BG080409		Signal Transduction
1835 1836	H3053E04	"Mus musculus calponin 1 (Cnn1), mRNA"		BG067357	Mm.4356	Signal Transduction
1837 1838	H3053G12	"Mus musculus polynucleotide kinase 3'-phosphatase (Pnkp), mRNA"		BG067384	Mm.29545	Signal Transduction
1839 1840	H3053H06	citrin (Slc25a13)	Mus musculus citrin (Slc25a13) mRNA, complete cds	BG083930	Mm.2124	Energy/Metabolism
1841 1842	H3054B05	"Mus musculus folate receptor 3 (Folbp3) mRNA, complete cds"		BG080476	Mm.86738	Signal Transduction
1843 1844	H3054B12	Nrf 2	Mus musculus p45 NF-E2 related factor 2 (Nrf2) mRNA, complete cds	BG067417	Mm.1025	

1863									
1864	H3055B08	major histocompatibility locus class III region:butyrophilin-like protein gene, partial cds; Notch4, PBX2, RAGE, lysophatidic acid acyl transferase-alpha, palmitoyl-protein thioestera	Mus musculus major histocompatibility locus class III region:butyrophilin-like protein gene, partial cds; Notch4, PBX2, RAGE, lysophatidic acid acyl transferase-alpha, palmitoyl-protein thioestera				Mm.1511		
1865		inhibitor of kappa light polypeptide gene enhancer in B-cells, kinase beta							
1866	H3055B10	IKK[b]IKK2IKK-2IKK-beta					Mm.28269		Energy/Metabolism
1867		"Mus musculus Ras-GTPase-activating protein SH3-domain binding protein (G3bp-pending), mRNA"							
1868	H3055C04					BG080577	Mm.2038		Signal Transduction
1869		"Homo sapiens inositol 1,3,4-triphosphate 5/6 kinase (ITPK1), mRNA"							
1870	H3055C05					BG080578			Signal Transduction
1871									
1872	H3055C10	ATP/GTP-binding protein (HEAB),	Homo sapiens ATP/GTP-binding protein (HEAB), mRNA			BG080583	Mm.21583		Energy/Metabolism
1873		aldolase B, fructose-bisphosphate							
1874	H3055D02	(ALDOB),	Homo sapiens aldolase B, fructose-bisphosphate (ALDOB), mRNA			BG080587	Mm.87581		Energy/Metabolism
1875									
1876	H3055E07	TRAF family member associated NF-kappa B activator (TANK)	Mus musculus TRAF family member associated NF-kappa B activator (TANK) mRNA, complete cds			BG080604	Mm.1803		Apoptosis
1877									
1878	H3055F07	delta-aminolevulinatase (Lv),	Mus musculus delta-aminolevulinatase (Lv), mRNA			BG080616	Mm.90076		Energy/Metabolism
1879									
1880	H3055G02	dipeptidyl peptidase I precursor	Mus musculus dipeptidyl peptidase I precursor mRNA, complete cds			BG080623	Mm.684		Energy/Metabolism

1881	H3056A09	"M.musculus mRNA for inositol 1,4,5-trisphosphate receptor (type 2)"			BG067589	Mm.7800	Signal Transduction
1882							
1883	H3056C11	DKFZP564O2082 protein	Homo sapiens DKFZP564O2082 protein (DKFZP564O2082), mRNA			Mm.21826	
1884							
1885	H3056D03	"Homo sapiens calponin 3, acidic (CNN3), mRNA"			BG080757	Mm.22171	Signal Transduction
1886							
1887	H3056G10	thioredoxin 2 (TRX2)	Homo sapiens thioredoxin 2 (TRX2) mRNA, complete cds		BG080633	Mm.3533	Energy/Metabolism
1888							
1889	H3056H05						Energy/Metabolism
1890							
1891	H3057C01	"Mus musculus interferon-related developmental regulator 1 (Ifrd1), mRNA"			BG067699	Mm.168	Heat Shock/Stress
1892							
1893	H3057C08	GPX3				Mm.7156	Energy/Metabolism
1894							
1895	H3057C10	bisphosphate 3-nucleotidase 1 (Bpnt1),	Mus musculus bisphosphate 3-nucleotidase 1 (Bpnt1), mRNA		BG067708	Mm.18096	Energy/Metabolism
1896							
1897	H3057D09	acetyl-Coenzyme A carboxylase beta (ACACB),	Homo sapiens acetyl-Coenzyme A carboxylase beta (ACACB), mRNA		BG067718	Mm.88548	Energy/Metabolism
1898							
1899	H3057E05	"Mus musculus protein tyrosine phosphatase, non-receptor type 21 (Ptpn21), mRNA"			BG080698	Mm.4420	Signal Transduction
1900							
1901	H3057F01	"Mus musculus casein kinase 1, epsilon (Csnk1e), mRNA"			BG080793	Mm.30199	Signal Transduction
1902							
1903	H3057H04	"Mus musculus HSP40-like protein mRNA, partial sequence"			BG080820	Mm.46746	Heat Shock/Stress
1904							

1905			solute carrier family 16 (monocarboxylic acid transporters), member 2 (Slc16a2), mRNA	Mus musculus solute carrier family 16 (monocarboxylic acid transporters), member 2 (Slc16a2), mRNA	C87415	Mm.5045	Energy/Metabolism
1906	H3057H06						
1907			Fas-interacting serine/threonine kinase 3 (Fist3)	Mus musculus Fas-interacting serine/threonine kinase 3 (Fist3) mRNA, complete cds	BG080836	Mm.29026	Apoptosis
1908	H3058A10						
1909							
1910	H3058C03		Bcl2-like 10 (Bcl2l10), mRNA	Mus musculus Bcl2-like 10 (Bcl2l10), mRNA	BG080862	Mm.25988	Apoptosis
1911			"Mus musculus Jun oncogene (Jun), mRNA"				
1912	H3058C09				BG080846	Mm.482	Signal Transduction
1913			"Mus musculus guanine nucleotide binding protein (G protein), gamma 3 subunit (Gng3), mRNA"				
1914	H3058D09				BG080868	Mm.27307	Signal Transduction
1915			transient receptor potential-related protein (Chak), mRNA	Mus musculus transient receptor potential-related protein (Chak), mRNA	BG080898	Mm.143646	Energy/Metabolism
1916	H3058G06						
1917			sodium bicarbonate cotransporter isoform 3 (NBC-3), mRNA	Mus musculus sodium bicarbonate cotransporter isoform 3 (NBC-3), mRNA	BG067865	Mm.34957	Energy/Metabolism
1918	H3059A10						
1919			"Homo sapiens regulator of G-protein signalling 12 (RGS12), mRNA"		BG067869	Mm.31378	Signal Transduction
1920	H3059B02						
1921			"Mus musculus protein kinase C delta mRNA, complete cds"		BG080928	Mm.142839	Signal Transduction
1922	H3059B03						
1923			"Mus sp. JAK1 protein tyrosine kinase mRNA, complete cds"				
1924	H3059B07				BG067874	Mm.28598	Signal Transduction
1925							
1926	H3059D07		alanyl-tRNA synthetase (AARS), mRNA	Homo sapiens alanyl-tRNA synthetase (AARS), mRNA	BG080951	Mm.24174	Energy/Metabolism

1927	H3059D11	KIAA1093 protein, partial cds	Homo sapiens mRNA for KIAA1093 protein, partial cds	BG067897	Mm.22829	Apoptosis
1928						
1929	H3059F12	"Mus musculus GTP binding protein (GTP2) mRNA, complete cds"		BG067921	Mm.15793	Signal Transduction
1930						
1931	H3059G11	intronless glutamine synthetase gene	Mouse intronless glutamine synthetase gene, complete cds	BG067932	Mm.41660	Energy/Metabolism
1932						
1933	H3060A10	M.musculus arachidonate epidermis-type 12(S)-lipoxygenase	M.musculus mRNA for arachidonate epidermis-type 12(S)-lipoxygenase	BG067951	Mm.1122	Energy/Metabolism
1934						
1935		"Homo sapiens mitogen-activated protein kinase kinase kinase 5 (MAP4K5), mRNA"				
1936	H3060B09			BG081019	Mm.24022	Signal Transduction
1937						
1938	H3060D04	Mm.24594			Mm.24594	Energy/Metabolism
1939		"Mus musculus JNK-binding protein 1 (Jnkbp1-pending), mRNA"				
1940	H3060H04			BG081077	Mm.25540	Signal Transduction
1941						
1942	H3060H07	Mm.25580			Mm.25580	Energy/Metabolism
1943						
1944	H3061B06	UDP-N-acetyl-alpha-D-galactosamine:polypeptide N-acetyl/galactosaminyltransferase 3 (Galnt3), mRNA	Mus musculus UDP-N-acetyl-alpha-D-galactosamine:polypeptide N-acetyl/galactosaminyltransferase 3 (Galnt3), mRNA	BG068045	Mm.38441	Energy/Metabolism
1945						
1946	H3061E04	cysteine dioxygenase, type I (CDO1),	Homo sapiens cysteine dioxygenase, type I (CDO1), mRNA	BG081135	Mm.29996	Energy/Metabolism
1947						
1948	H3061H08	guanine deaminase (Gda),	Mus musculus guanine deaminase (Gda), mRNA	BG081171		Energy/Metabolism
1949						
1950	H3062C04	spermine synthase (Sms),	Mus musculus spermine synthase (Sms), mRNA	BG081202		Energy/Metabolism

1951	H3062E02	isocitrate dehydrogenase		Mus musculus isocitrate dehydrogenase mRNA, complete cds	BG081213	Mm.18213	Energy/Metabolism
1952							
1953							
1954	H3062H07	"Mus musculus inositol 1,4,5-triphosphate receptor 1 (Itp1), mRNA"			BG081243	Mm.2726	Signal Transduction
1955							
1956	H3062H08	Mm.11827				Mm.11827	Energy/Metabolism
1957							
1958	H3063A03	"Mus musculus calpain 7 (Capn7), mRNA"			BG081250	Mm.142370	Signal Transduction
1959							
1960	H3063A08	Prsc1		Mus musculus protease, cysteine, 1 (Prsc1), mRNA	BG068219	Mm.17185	Energy/Metabolism
1961							
1962	H3063A09	"Mus musculus novel ras effector 1 (Nore1-pending), mRNA"			BG068220	Mm.10133	Signal Transduction
1963							
1964	H3063C09	beta-1,4-galactosyltransferase VI		Mus musculus beta-1,4-galactosyltransferase VI mRNA, complete cds	BG081279	Mm.26364	Energy/Metabolism
1965							
1966	H3063H10	LAT2 (Slc7a8)		Mus musculus mRNA for LAT2 protein (Slc7a8 gene)	BG068299	Mm.27830	Energy/Metabolism
1967							
1968	H3064C02	"Mus musculus large tumor suppressor 1 (Lats1) mRNA, partial cds"			BG081357	Mm.35642	Signal Transduction
1969							
1970	H3064C04	kinesin-like 5 (mitotic kinesin-like protein 1) (KNLSL5),		Homo sapiens kinesin-like 5 (mitotic kinesin-like protein 1) (KNLSL5), mRNA			Cell Cycle
1971							
1972	H3064E02	vacuolar adenosine triphosphatase subunit A gene		Mus musculus vacuolar adenosine triphosphatase subunit A gene, complete cds	BG081377	Mm.29771	Energy/Metabolism
1973							
1974	H3064H04	HMG box protein		Mus musculus HMG box protein mRNA, complete cds		Mm.41766	Transcription/Chromatin

1975 1976	H3065C08	"Mus musculus calmodulin dependent phosphatase catalytic subunit (Cam-Prp) mRNA, 3' end"		BG081448	Mm.24381	Signal Transduction
1977 1978	H3065C11	"Mus musculus Chetk-alpha gene for choline/ethanolamine kinase-alpha, exon 1 and 5'-flanking region"		BG081451		Signal Transduction
1979 1980	H3065D10	"Homo sapiens RAP1A, member of RAS oncogene family (RAP1A), mRNA"		BG068432	Mm.144498	Signal Transduction
1981 1982	H3065E07	UDP-glucose dehydrogenase (Ugdh),	Mus musculus UDP-glucose dehydrogenase (Ugdh), mRNA	BG068439	Mm.10709	Energy/Metabolism
1983 1984	H3066H07	heme oxygenase-2	Mus musculus heme oxygenase-2 mRNA, complete cds	BG081591		Energy/Metabolism
1985 1986	H3067A07	potassium channel modulatory factor DEBT-91 (Debt91),	Mus musculus potassium channel modulatory factor DEBT-91 (Debt91), mRNA	BG081603	Mm.29194	Energy/Metabolism
1987 1988	H3067B08	"Mus musculus phosphoinositide 3-kinase regulatory subunit p85alpha mRNA, complete cds"		BG081616	Mm.3058	Signal Transduction
1989 1990	H3067E02	"Mus musculus RAS-related C3 botulinum substrate 1, guanine nucleotide exchange factor 1 (Racgef1-pending), mRNA"		BG068616	Mm.29014	Signal Transduction
1991 1992	H3068A08	kinesin-like 5 (mitotic kinesin-like protein 1) (KNSL5),	Homo sapiens kinesin-like 5 (mitotic kinesin-like protein 1) (KNSL5), mRNA		Mm.28386	Cell Cycle
1993 1994	H3068A11	ferritin light chain 1 (Ftl1),	Mus musculus ferritin light chain 1 (Ftl1), mRNA	BG081695		Energy/Metabolism

1995			ornithine decarboxylase antizyme inhibitor (Oazi),	Mus musculus ornithine decarboxylase antizyme inhibitor (Oazi), mRNA	BG081746	Mm.104010	Energy/Metabolism
1996	H3068F03						
1997			"Mus musculus Rho-associated coiled-coil forming kinase 1 (Rock1), mRNA"		BG081800	Mm.6710	Signal Transduction
1998	H3069C09			Homo sapiens cDNA FLJ12814 fis, clone NT2RP2002520, weakly similar to Homo sapiens transcription factor RFX-B (RFXB) mRNA	BG081823	Mm.27228	Energy/Metabolism
1999			cDNA FLJ12814 fis, clone NT2RP2002520, weakly similar to				
2000	H3069D09		transcription factor RFX-B (RFXB)	Homo sapiens			
2001			choline/ethanolaminephosphotransferase (CEPT1),	choline/ethanolaminephosphotransferase (CEPT1), mRNA	BG081849	Mm.14816	Energy/Metabolism
2002	H3069G01						
2003			RHOA proto-oncogene multi-drug-resistance protein, 3 end	Homo sapiens RHOA proto-oncogene multi-drug-resistance protein mRNA, 3 end	BG081880	Mm.757	Energy/Metabolism
2004	H3070A09						
2005			quinoid dihydropteridine reductase	Homo sapiens quinoid dihydropteridine reductase (QDPR), mRNA	BG081883	Mm.30204	Energy/Metabolism
2006	H3070A12						
2007			partial Kcnq1 gene potassium channel protein, exons 10-14	Mus musculus partial Kcnq1 gene for potassium channel protein, exons 10-14	BG081892		Energy/Metabolism
2008	H3070B09						
2009			hydroxysteroid dehydrogenase-1, delta<5>-3-beta (Hsd3b1),	Mus musculus hydroxysteroid dehydrogenase-1, delta<5>-3-beta (Hsd3b1), mRNA	BG081903	Mm.16941	Energy/Metabolism
2010	H3070C08						
2011			ATP-specific succinyl-CoA synthetase beta subunit (Scs), partial cds	Mus musculus ATP-specific succinyl-CoA synthetase beta subunit (Scs) mRNA, partial cds	BG068897	Mm.19154	Energy/Metabolism
2012	H3070E04						
2013			ATPase, class VI, type 11A (Atp11a),	Mus musculus ATPase, class VI, type 11A (Atp11a), mRNA	BG081967	Mm.148756	Energy/Metabolism
2014	H3071A03						

2015	H3071G11	"Homo sapiens RAP2B, member of RAS oncogene family (RAP2B), mRNA"		BG082041	Mm.26939	Signal Transduction
2016						
2017	H3071H04	glycerol-3-phosphate acyltransferase	Mouse glycerol-3-phosphate acyltransferase mRNA, complete cds		Mm.87773	
2018						
2019	H3072A08	glyceraldehyde-3-phosphate dehydrogenase (Gapd)	Mus musculus glyceraldehyde-3-phosphate dehydrogenase (Gapd), mRNA	BG082061		Energy/Metabolism
2020						
2021	H3072B11	"Mus musculus PLC-L2 mRNA for phospholipase C-L2, complete cds"		BG069051	Mm.28034	Signal Transduction
2022						
2023	H3072F03	Mm.22651			Mm.22651	Energy/Metabolism
2024						
2025	H3072G09	potassium voltage-gated channel, subfamily H (eag-related), member 1 (Kcch1), mRNA	Mus musculus potassium voltage-gated channel, subfamily H (eag-related), member 1 (Kcch1), mRNA	BG069106	Mm.4489	Energy/Metabolism
2026						
2027	H3073F09	Mm.27123			Mm.27123	Energy/Metabolism
2028						
2029	H3073F10	"Mus musculus 80kDa m-calpain subunit (calp80) mRNA, complete cds"		BG082209	Mm.6958	Signal Transduction
2030						
2031	H3073G07	granzyme M	Mus musculus mRNA for granzyme M, complete cds	BG082217	Mm.22302	Energy/Metabolism
2032						
2033	H3074A02	inhibitor of apoptosis protein 1	Mus musculus inhibitor of apoptosis protein 1 mRNA, complete cds	BG069214	Mm.2026	Apoptosis
2034						
2035	H3074A03	NIMA (never in mitosis gene a)-related expressed kinase 7 (Nek7),	Mus musculus NIMA (never in mitosis gene a)-related expressed kinase 7 (Nek7), mRNA		Mm.143817	Cell Cycle
2036						
2037	H3074C12	dUTPase	Mus musculus dUTPase mRNA, complete cds	BG082266		Energy/Metabolism

2038			"Mus musculus protein phosphatase type 2A catalytic subunit alpha isoform mRNA, complete cds"			BG082298	Mm.11711	Signal Transduction
2039	H3074F08							
2040			H.sapiens 40 kDa protein kinase related to rat ERK2		H.sapiens 40 kDa protein kinase related to rat ERK2			
2041	H3074G02						Mm.1700	
2042					Homo sapiens mRNA for NAALADase II protein	BG082322	Mm.26132	Energy/Metabolism
2043	H3074H09		NAALADase II protein					
2044							Mm.26128	Energy/Metabolism
2045	H3075A04		Mm.26128					
2046			esterase-22=endoplasmic reticulum-targeting protein of beta-glucuronidase		esterase-22=endoplasmic reticulum-targeting protein of beta-glucuronidase			
2047	H3075A09		[mice, 2022 nt]		[mice, mRNA, 2022 nt]	BG069315	Mm.29110	Energy/Metabolism
2048			ATP-specific succinyl-CoA synthetase beta subunit (Scs), partial cds		Mus musculus ATP-specific succinyl-CoA synthetase beta subunit (Scs) mRNA, partial cds	BG069442	Mm.19154	Energy/Metabolism
2049	H3075F01							
2050			F1F0-ATP synthase, g subunit		Mus musculus mRNA for F1F0-ATP synthase, g subunit	BG082389	Mm.14663	Energy/Metabolism
2051	H3075F08							
2052			"Mus musculus heat shock protein 20-like protein mRNA, complete cds"			BG069463	Mm.21549	Heat Shock/Stress
2053	H3075F11							
2054			molybdenum cofactor synthesis-step 1 proteins A and B splice type I (Mocs1)		Mus musculus molybdenum cofactor synthesis-step 1 proteins A and B splice type I (Mocs1) mRNAs, partial cds, alternatively spliced	BG082399	Mm.36112	Energy/Metabolism
2055	H3075G06		s, partial cds, alternatively spliced					
2056			peptidyl arginine deiminase, type II		Mus musculus peptidyl arginine deiminase, type II (Pdi2), mRNA	BG082407	Mm.2296	Energy/Metabolism
2057	H3075H02							
2058			"Mus musculus Rho interacting protein					
2059	H3076B05		2 (Rhoip2-pending), mRNA"			BG069493	Mm.4620	Signal Transduction

2060									
2061	H3076C12	fatty-acid-Coenzyme A ligase, long-chain 4 (FACL4),	Homo sapiens fatty-acid-Coenzyme A ligase, long-chain 4 (FACL4), mRNA	BG069344	Mm.12166	Energy/Metabolism			
2062		"AC005290, complete sequence [Mus musculus]"							
2063	H3076F04	"Homo sapiens regulator of G protein signaling RGS12 (RGS) mRNA, complete cds"		BG069372	Mm.1967	Signal Transduction			
2064									
2065	H3076F12	"Mus musculus signal transducer and activator of transcription 2 (Stat2), mRNA"		BG082484	Mm.31378	Signal Transduction			
2066									
2067	H3076G06	"Homo sapiens similar to argininosuccinate lyase (H. sapiens) (LOC63402), mRNA"		BG069385	Mm.21935	Signal Transduction			
2068									
2069	H3076G11	similar to argininosuccinate lyase (H. sapiens) (LOC63402), mRNA		BG082495	Mm.23869	Energy/Metabolism			
2070		"Mus musculus adenylate kinase 4 (Ak4), mRNA"							
2071	H3076H06			BG082501	Mm.142051	Signal Transduction			
2072									
2073	H3076H10	"Mus musculus casein kinase II, alpha 2, polypeptide (Csnk2a2), mRNA"		BG069401	Mm.28881	Signal Transduction			
2074									
2075	H3077B02	solute carrier family 12, member 2 (Slc12a2),	Mus musculus solute carrier family 12, member 2 (Slc12a2), mRNA	BG069505	Mm.4168	Energy/Metabolism			
2076									
2077	H3077C01	X28 region near ALD locus containing dual specificity phosphatase 9 (DUSP9), ribosomal protein L18a (RPL18a), Ca2+/Calmodulin-dependent protein kinase I (CAMKI), creatine transporter (Homo sapiens X28 region near ALD locus containing dual specificity phosphatase 9 (DUSP9), ribosomal protein L18a (RPL18a), Ca2+/Calmodulin-dependent protein kinase I (CAMKI), creatine transporter (BG069516	Mm.28056	Energy/Metabolism			

2078	H3077F08	ATPase, H(+)-transporting, lysosomal, noncatalytic accessory protein 1B (ATP6N1B), mRNA	Homo sapiens ATPase, H(+)-transporting, lysosomal, noncatalytic accessory protein 1B (ATP6N1B), mRNA	BG082574	Mm.26909	Energy/Metabolism
2080	H3077H01	hypothetical protein FLJ10726 (FLJ10726), mRNA	Homo sapiens hypothetical protein FLJ10726 (FLJ10726), mRNA		Mm.30718	
2082	H3078G02	NIMA (never in mitosis gene a)-related expressed kinase 7 (Nek7), mRNA	Mus musculus NIMA (never in mitosis gene a)-related expressed kinase 7 (Nek7), mRNA			
2084	H3078H09	Rat L-gulonono-gamma-lactone oxidase	Rat L-gulonono-gamma-lactone oxidase mRNA, complete cds	BG082674	Mm.26207	Energy/Metabolism
2086	H3078H11	TRPM-2, cytosolic epoxide hydrolase, nicotinic acetylcholine receptor alpha2 subunit, and focal adhesion kinase genes, sequence	Homo sapiens TRPM-2, cytosolic epoxide hydrolase, nicotinic acetylcholine receptor alpha2 subunit, and focal adhesion kinase genes, complete cds, complete sequence	BG082676	Mm.26207	Energy/Metabolism
2088	H3079D11	solute carrier family 12, member 2 (Slc12a2), mRNA	Mus musculus solute carrier family 12, member 2 (Slc12a2), mRNA	BG069726	Mm.4168	Energy/Metabolism
2090	H3079D12	"Mus musculus phospholipase D3 (Plid3), mRNA"		BG069727	Mm.6483	Signal Transduction
2092	H3079E06	"Mus musculus interferon regulatory factor 6 (Irf6), mRNA"		BG069733	Mm.4179	Heat Shock/Stress
2094	H3079F01	cDNA: FLJ22083 fis, clone HEP14459, highly similar to HUM3H3M 3-hydroxy-3-methylglutaryl coenzyme A synthase	Homo sapiens cDNA: FLJ22083 fis, clone HEP14459, highly similar to HUM3H3M Homo sapiens 3-hydroxy-3-methylglutaryl coenzyme A synthase mRNA	BG069739	Mm.22675	Energy/Metabolism

2184	H3088F03						

2185		Mus musculus ATPase, H ⁺ transporting, lysosomal (vacuolar proton pump), beta 56/58 kDa, isoform					
2186	H3089A062	2 (Atp6b2), mRNA			BG083588	Mm.10727	Energy/Metabolism
2187		Mus musculus ATP-binding cassette					
2188	H3089A11	protein (Abcf2) mRNA, partial cds			BG083593	Mm.21629	Energy/Metabolism
2189		"Mus musculus protein kinase Chk2					
2190	H3089F09	(Rad53-pending), mRNA"			BG083482	Mm.126031	Signal Transduction
2191		Mus musculus zinc transporter like 1					
2192	H3089G12	(Znt1) mRNA, complete cds			BG083497	Mm.28851	Energy/Metabolism
2193		Mouse normal c-myc gene and					
2194	H3089H11	translocated homologue from J558 plasmocytoma cells (cDNA sequence)			BG083596	Mm.2444	Signal Transduction
2195		"Mus musculus mothers-against-dpp-					
2196	H3090B01	related-1 mRNA, complete cds"			BG083610	Mm.15185	Signal Transduction
2197		uracil-DNA glycosylase gene,					
2198	H3090B05	alternatively spliced			BG070697	Mm.112312	Energy/Metabolism
2199		ornithine decarboxylase antizyme					
2200	H3090C08	inhibitor (Oazi), mRNA			BG070710	Mm.6775	Energy/Metabolism
2201		N-terminal asparagine amidohydrolase					
2202	H3090C10	(Ntan1) gene			BG083629	Mm.22635	Energy/Metabolism

2203		"Mus musculus mitogen activated protein kinase kinase 12"					
2204	H3090D01	(Map3k12), mRNA"			BG083632	Mm.4358	Signal Transduction
2205		partial gene encoding					
2206	H3091B08	deoxyribonuclease I and 5 UTR		Mus musculus partial gene encoding deoxyribonuclease I and 5 UTR	BG070787	Mm.42205	Energy/Metabolism
2207		"Mus musculus guanine nucleotide binding protein, alpha 14 (Gna14), mRNA"					
2208	H3091D08				BG083726	Mm.133949	Signal Transduction
2209		tumor necrosis factor (ligand) superfamily, member 19 (Tnfrsf19-pending),		Mus musculus tumor necrosis factor (ligand) superfamily, member 19 (Tnfrsf19-pending), mRNA			
2210	H3091D11				BG070891	Mm.22585	Apoptosis
2211		5(3)-deoxyribonucleotidase (Dnt-		Mus musculus 5(3)-deoxyribonucleotidase (Dnt-pending), mRNA			
2212	H3091E02	pending),			BG070894	Mm.41722	Energy/Metabolism
2213		N-terminal Asn amidase (Ntan1),		Mus musculus N-terminal Asn amidase (Ntan1), mRNA			
2214	H3091F08				BG070912	Mm.22635	Energy/Metabolism
2215		solute carrier family 1, member 7		Mus musculus solute carrier family 1, member 7 (Slc1a7), mRNA			
2216	H3091G12	(Slc1a7),			BG070928	Mm.1056	Energy/Metabolism
2217		"Mus musculus H-ras gene, partial cds"					
2218	H3091H05				BG070933	Mm.6793	Signal Transduction
2219		deiodinase, iodothyronine type III		Rattus norvegicus deiodinase, iodothyronine type III (Dio3), mRNA			
2220	H3091H07	(Dio3),			BG070934	Mm.154427	Energy/Metabolism
2221		Balb/c cytochrome c oxidase subunit		Mus musculus Balb/c cytochrome c oxidase subunit VtaL mRNA, complete cds			
2222	H3092E03	VtaL			BG083822	Mm.43415	Energy/Metabolism
2223		caspase 8 associated protein 2		Mus musculus caspase 8 associated protein 2 (Casp8ap2), mRNA			
2224	H3092E04	(Casp8ap2),			BG070820	Mm.22279	Apoptosis

2225	H3092G01	"Mus musculus p38delta MAP kinase mRNA, complete cds"			BG083840	Mm.27970	Signal Transduction
2226	H3092H01	vacuolar adenosine triphosphatase subunit A gene	Mus musculus vacuolar adenosine triphosphatase subunit A gene, complete cds		BG070846	Mm.29771	Energy/Metabolism
2227	H3092H01						
2228	H3092H01	"Mus musculus mitogen-activated protein kinase 8 interacting protein 2 (Mapk8ip2), mRNA"			BG083857		Signal Transduction
2229	H3092H09				BG070855	Mm.6375	Energy/Metabolism
2230	H3092H10	glycogenin 1 (Gyg1), mRNA	Mus musculus glycogenin 1 (Gyg1), mRNA		BG083875	Mm.104172	Energy/Metabolism
2231	H3093B07	chloride channel 5 (Clcn5), mRNA	Mus musculus chloride channel 5 (Clcn5), mRNA		BG083900	Mm.9326	Energy/Metabolism
2232	H3093D09	Tom22	Homo sapiens mRNA for Tom22, complete cds				
2233	H3093F02	uridine monophosphate kinase (UMPK), mRNA	Homo sapiens uridine monophosphate kinase (UMPK), mRNA		BG083915		Energy/Metabolism
2234	H3093G07	tumor suppressor (N33), mRNA"	"Homo sapiens Putative prostate cancer tumor suppressor (N33), mRNA"		BG071015	Mm.24156	Signal Transduction
2235	H3093G08	Partial, 860 nt	GST-5=glutathione S-transferase-sperm antigen MSAg-5 fusion protein {3 region} [mice, testis, Recombinant Partial, 860 nt]				
2236	H3093H01	mannosyl (alpha-1,6-)-glycoprotein beta-1,2-N-acetylglucosaminyltransferase (MGAT2), mRNA	Homo sapiens mannosyl (alpha-1,6-)-glycoprotein beta-1,2-N-acetylglucosaminyltransferase (MGAT2), mRNA		BG071016	Mm.11346	Energy/Metabolism
2237	H3093H01						
2238	H3093H01				BG084016	Mm.24293	Energy/Metabolism

2245	H3094C01	Mus musculus gene for prostacyclin synthase, 5-flanking region and partial cds		BG084049		Energy/Metabolism
2246						
2247		Mus musculus cytochrome P450 side chain cleavage enzyme 11a1				
2248	H3094D01	(Cyp11a1), mRNA		BG071067	Mm.108678	Energy/Metabolism
2249		"Mus musculus GNB1 gene for G protein beta1 subunit, exon 12 and				
2250	H3094D02	complete cds"		BG071068	Mm.2344	Signal Transduction
2251						
2252	H3094D04	Mus musculus GLUT4 vesicle protein mRNA, partial cds		BG071070	Mm.29010	Energy/Metabolism
2253						
2254	H3094E12				Mm.26092	Energy/Metabolism
2255		Homo sapiens cDNA FLJ12225 fis, clone MAMMA1001139, weakly				
2256	H3094G04	similar to SRE-2 PROTEIN		BG083967	Mm.12983	Energy/Metabolism
2257		Homo sapiens mitogen-activated protein kinase kinase kinase 3				
2258	H3094G10	(MAP4K3), mRNA			Mm.29588	
2259		Mus musculus Bcl2-interacting killer-				
2260	H3094H06	like (Bik1k), mRNA		BG071119	Mm.17912	Apoptosis
2261		Mus musculus mitogen activated protein kinase kinase kinase 12 (Map3k12),				
2262	H3095D11	mRNA				
2263	H3095E06	Mus musculus glutathione S-transferase like (Gstl-pending), mRNA		BG084006	Mm.282	Energy/Metabolism

2264	H3095F10	Homo sapiens calcineurin binding protein 1 (KIA0330), mRNA			BG071186	Mm.154496	
2265							
2266							
2267	H3095G051	Rattus norvegicus Fucosidase, alpha-L-1, tissue (Fuca), mRNA			BG084074	Mm.21580	Energy/Metabolism
2268	H3095H12	Mus musculus carbonic anhydrase 4 (Car4), mRNA			BG071207	Mm.1641	Energy/Metabolism
2269							
2270	H3096A03	cytochrome c oxidase, subunit IV (Cox4),	Mus musculus cytochrome c oxidase, subunit IV (Cox4), mRNA		BG084085	Mm.2136	Energy/Metabolism
2271							
2272	H3096D01	"Mus musculus protein phosphatase 4, catalytic subunit (Ppp4c), mRNA"			BG071232	Mm.28082	Signal Transduction
2273							
2274	H3096E12	clone TSIP1 p53-induced apoptosis differentially expressed sequence	Mus musculus clone TSIP1 p53-induced apoptosis differentially expressed mRNA sequence		BG084126	Mm.142872	Apoptosis
2275							
2276	H3096F11	HNK-1 sulfotransferase (HNK-1ST),	Homo sapiens HNK-1 sulfotransferase (HNK-1ST), mRNA		BG084134	Mm.26817	Energy/Metabolism
2277							
2278	H3097A02	Homo sapiens leucine aminopeptidase (LOC51056), mRNA			BG084150	Mm.34832	Energy/Metabolism
2279							
2280	H3097A03	Mus musculus cytochrome c oxidase, subunit IV (Cox4), mRNA			BG084151	Mm.2136	Energy/Metabolism
2281							
2282	H3097A05	Homo sapiens sulfite oxidase (SUOX), mRNA			BG084153	Mm.23352	Energy/Metabolism
2283							
2284	H3097B01	Mus musculus branched chain aminotransferase 1, cytosolic (Bcat1), mRNA			BG084158	Mm.4606	Energy/Metabolism

		Mus musculus solute carrier family 11 (proton-coupled divalent metal ion transporters), member 2 (Slc11a2), mRNA		BG084160	Mm.36460	Energy/Metabolism
2285	H3097B03					
2286	H3097C12				Mm.22409	Energy/Metabolism
2287						
2288						
2289	H3097F02	Mus musculus sialyltransferase 8 (alpha-2, 8-sialyltransferase) B (Siat8b), mRNA		BG084201	Mm.4954	Energy/Metabolism
2290						
2291	H3097F06	Homo sapiens FACL5 for fatty acid coenzyme A ligase 5 (LOC51703), mRNA		BG084205	Mm.30263	Energy/Metabolism
2292						
2293	H3097G07	"Mus musculus retinoblastoma-binding protein 9 (Rbbp9), mRNA"		BG084218	Mm.24216	Signal Transduction
2294						
2295	H3097H08	"Mus musculus retinoblastoma binding protein 4 (Rbbp4), mRNA"		BG084231	Mm.12145	Signal Transduction
2296						
2297	H3098A08	B.taurus PSST subunit of the NADH: ubiquinone oxidoreductase complex	B.taurus mRNA for PSST subunit of the NADH: ubiquinone oxidoreductase complex	BG084240	Mm.28712	Energy/Metabolism
2298						
2299	H3098D02	"Mus musculus protein tyrosine phosphatase, receptor-type, F interacting protein, binding protein 2 (Ppfibp2), mRNA"		BG084265	Mm.2817	Signal Transduction
2300						
2301	H3098D12	"Mus musculus mitogen activated protein kinase kinase 1 (Map2k1), mRNA"		AU041108	Mm.1059	Signal Transduction
2302						

2303	H3098E11	"Mus musculus chaperonin subunit 2 (beta) (Cct2), mRNA"			BG084277	Mm.40849	Heat Shock/Stress
2304							
2305	H3098H02	carboxyl reductase (LOC51181),	Homo sapiens carbonyl reductase (LOC51181), mRNA		BG084296		Energy/Metabolism
2306							
2307	H3099A05	5-nucleotidase (purine), cytosolic type B (NT5B),	Homo sapiens 5-nucleotidase (purine), cytosolic type B (NT5B), mRNA	Mm.29601	BG084308		Energy/Metabolism
2308							
2309		solute carrier family 34 (sodium phosphate), member 2 (Slc34a2),	Mus musculus solute carrier family 34 (sodium phosphate), member 2 (Slc34a2), mRNA		BG084323		Energy/Metabolism
2310	H3099C01						
2311	H3099D04	cytochrome c oxidase Vb subunit gene	Mouse cytochrome c oxidase Vb subunit gene, complete cds	Mm.16769	BG071472		Energy/Metabolism
2312							
2313		cDNA FLJ13488 fis, clone PLACE1003915, weakly similar to PROBABLE ARGINYL-TRNA SYNTHETASE, CYTOPLASMIC (EC 6.1.1.19)	Homo sapiens cDNA FLJ13488 fis, clone PLACE1003915, weakly similar to PROBABLE ARGINYL-TRNA SYNTHETASE, CYTOPLASMIC (EC 6.1.1.19)	Mm.22363	BG084341		
2314	H3099E08						
2315		rod cGMP phosphodiesterase delta subunit (Pde6d) gene	Mus musculus rod cGMP phosphodiesterase delta subunit (Pde6d) gene, complete cds	Mm.12925	BG084383		Energy/Metabolism
2316	H3100C01						
2317		potassium intermediate/small conductance calcium-activated channel, subfamily N, member 2 (KCNN2),	Homo sapiens potassium intermediate/small conductance calcium-activated channel, subfamily N, member 2 (KCNN2), mRNA	Mm.17734	BG084391		Energy/Metabolism
2318	H3100C10						
2319		inhibitor of apoptosis protein 1	Mus musculus inhibitor of apoptosis protein 1 mRNA, complete cds	Mm.2026	BG084405		Apoptosis
2320	H3100E04						
2321		ribosomal protein L23 (RpL23),	Mus musculus ribosomal protein L23 (RpL23), mRNA	Mm.12144	BG084450		Energy/Metabolism
2322	H3101A08						

2323	H3101C10	glyceraldehyde-3-phosphate dehydrogenase (Gapd),	Mus musculus glyceraldehyde-3-phosphate dehydrogenase (Gapd), mRNA	BG071626	Mm.5289	Energy/Metabolism
2324						
2325	H3101D05	phosphatidylethanolamine N-methyltransferase (Pemt),	Mus musculus phosphatidylethanolamine N-methyltransferase (Pemt), mRNA	BG071633	Mm.2731	Energy/Metabolism
2326						
2327		solute carrier family 34 (sodium phosphate), member 2 (Slc34a2),	Mus musculus solute carrier family 34 (sodium phosphate), member 2 (Slc34a2), mRNA	BG071644	Mm.3786	Energy/Metabolism
2328	H3101E05	"Mus musculus DNA J protein (Dnaj3), mRNA"		AU044106	Mm.29186	Heat Shock/Stress
2329	H3101G05					
2330		"Rattus norvegicus myotonic dystrophy kinase-related Cdc42-binding kinase				
2331	H3101H02	(MRCK) mRNA, complete cds"		BG071671	Mm.38330	Signal Transduction
2332						
2333	H3102A07	phosphatidylserine synthase 1 (Ptss1),	Mus musculus phosphatidylserine synthase 1 (Ptss1), mRNA	BG071685	Mm.9440	Energy/Metabolism
2334						
2335	H3102C06	choline transporter (CHOT1),	Rattus norvegicus choline transporter (CHOT1), mRNA	BG071707	Mm.28056	Energy/Metabolism
2336		apoptotic chromatin condensation inducer in the nucleus (Acinus-				
2337	H3102D02	pending),	Mus musculus apoptotic chromatin condensation inducer in the nucleus (Acinus-pending), mRNA	BG071714	Mm.30236	Apoptosis
2338						
2339	H3102D09	"Mus musculus retinoblastoma binding protein 7 (Rbtp7), mRNA"		BG084566	Mm.1603	Signal Transduction
2340						
2341	H3102E01	potassium channel modulatory factor DEBT-91 (Debt91),	Mus musculus potassium channel modulatory factor DEBT-91 (Debt91), mRNA	BG071725	Mm.29194	Energy/Metabolism

128

2364	H3104A11	Mus musculus thioredoxin-like (32kD) (Txn1), mRNA		BG071869	Mm.19169	Energy/Metabolism
2365						
2366	H3104D01	Mouse mRNA for beta-1,4-galactosyltransferase		BG071892	Mm.15622	Energy/Metabolism
2367						
2368	H3104E06	Mus musculus ATP-binding cassette protein (Abcc1b) mRNA, partial cds		BG071908	Mm.41002	Energy/Metabolism
2369						
2370	H3105A09	Pseudomonas aeruginosa PA01, section 341 of 529 of the genome	Pseudomonas aeruginosa PA01, section 341 of 529 of the complete genome	BG071952		Energy/Metabolism
2371						
2372	H3105A10	cDNA FLJ12989 fis, clone NT2RP3000085, moderately similar to ACETYL-PROPIONYL-COENZYME A CARBOXYLASE ALPHA CHAIN [CONTAINS: BIOTIN CARBOXYLASE (EC 6.3.4.14); BIOTIN CARBOXYL CARRIER	Homo sapiens cDNA FLJ12989 fis, clone NT2RP3000085, moderately similar to ACETYL-PROPIONYL-COENZYME A CARBOXYLASE ALPHA CHAIN [CONTAINS: BIOTIN CARBOXYLASE (EC 6.3.4.14); BIOTIN CARBOXYL CARRIER	BG084872	Mm.154589	Energy/Metabolism
2373						
2374	H3105B07	"Mus musculus Cctz-2 gene for chaperonin containing TCP-1 zeta-2 subunit, exon 1, 2, 3"		BG084881	Mm.29622	Heat Shock/Stress
2375						
2376	H3105C03	CGI-30 protein (LOC51611),	Homo sapiens CGI-30 protein (LOC51611), mRNA	BG084888	Mm.5915	Energy/Metabolism
2377						
2378	H3105C04	natural killer cell BY55 precursor (By55-pending),	Mus musculus natural killer cell BY55 precursor (By55-pending), mRNA	BG084889	Mm.11526	Apoptosis
2379						
2380	H3105C10	"Mus musculus mRNA for LIMK2b, complete cds"		BG071976	Mm.42927	Signal Transduction
2381						
2382	H3105D09	mus apoptosis-associated speck-like protein containing CARD	Mus musculus masc mRNA for apoptosis-associated speck-like protein containing CARD, complete cds	BG071986	Mm.24163	Apoptosis
2383						

2384			tyrosine 3-monooxygenase/tryptophan	Mus musculus tyrosine 3-				
2385	H3105E08		5-monooxygenase activation protein, theta polypeptide (Ywhaq), mRNA	monooxygenase/tryptophan 5- monooxygenase activation protein, theta polypeptide (Ywhaq), mRNA	BG084914	Mm.14722	Energy/Metabolism	
2386			"Mus musculus mitogen-activated protein kinase kinase kinase 4					
2387	H3105G04		(Map4k4), mRNA"		BG084932	Mm.987	Signal Transduction	
2388			pyrroline 5-carboxylate reductase isom	Homo sapiens pyrroline 5-carboxylate				
2389	H3105G10		(P5CR2),	reductase isoform (P5CR2), mRNA	BG072021	Mm.29379	Energy/Metabolism	
2390							Energy/Metabolism	
2391	H3107D11		H3107D11				Energy/Metabolism	
2392								
2393	H3107E03		H3107E03					
2394			alpha-N-acetylglucosaminidase	Mus musculus alpha-N-				
2395	H3107G10		(Sanfilippo disease IIB) (Naglu),	acetylglucosaminidase (Sanfilippo disease IIB) (Naglu), mRNA	BG072192	Mm.6142	Energy/Metabolism	
2396								
2397	H3107G12		camitine octanoyltransferase (COT),	Homo sapiens carnitine	BG085029	Mm.28197	Energy/Metabolism	
2398				octanoyltransferase (COT), mRNA				
2399	H3108C03		3-5 exonuclease TREX1	Mus musculus 3-5 exonuclease TREX1	BG072232	Mm.17632	Energy/Metabolism	
2400								
2401	H3108E02		"Homo sapiens mitogen-activated protein kinase 6 (MAPK6), mRNA"		BG072253	Mm.18856	Signal Transduction	
2402								
2403	H3108E05		"Mus musculus RAS, dexamethasone- induced 1 (Rasd1), mRNA"		BG072256	Mm.3903	Signal Transduction	
2404								
2405	H3108F08		TF-1 cell apoptosis related protein-15	Mus musculus TF-1 cell apoptosis	BG085103	Mm.28441	Apoptosis	
			(Tfar15),	related protein-15 (Tfar15), mRNA				

2406									
2407	H3108H04	"Mus musculus adenyl cyclase type 9 mRNA, complete cds"				BG072288	Mm.4294	Signal Transduction	
2408									
2409	H3108H12	laminin B1			Mouse laminin B1 mRNA, complete cds	BG085129	Mm.148395	Apoptosis	
2410									
2411	H3109A04	"Mus musculus receptor (calcitonin) activity modifying protein 2 (Ramp2), mRNA"				BG072299	Mm.1574	Signal Transduction	
2412									
2413	H3109F07	ATPase, Ca++ transporting, cardiac muscle, slow twitch 2 (Atp2a2),			Mus musculus ATPase, Ca++ transporting, cardiac muscle, slow twitch 2 (Atp2a2), mRNA	BG085195	Mm.42255	Energy/Metabolism	
2414									
2415	H3110B08	tyrosine 3-monooxygenase/tryptophan 5-monooxygenase activation protein, theta polypeptide (Ywha),			Mus musculus tyrosine 3-monooxygenase/tryptophan 5-monooxygenase activation protein, theta polypeptide (Ywha), mRNA	BG085234	Mm.14722	Energy/Metabolism	
2416									
2417	H3110B12	"Homo sapiens casein kinase I alpha isoform (CSNK1A1) mRNA, complete cds"				BG072410	Mm.43737	Signal Transduction	
2418									
2419	H3110F10	epoxide hydrolase 1, microsomal (Ephx1),			Mus musculus epoxide hydrolase 1, microsomal (Ephx1), mRNA	BG072453	Mm.9075	Energy/Metabolism	
2420									
2421	H3110H11	"Mouse brain calmodulin-dependent phosphatase (calcineurin) catalytic subunit mRNA, 3' end"				BG072475	Mm.293	Signal Transduction	
2422									
2423	H3111A02	brain cDNA, clone MNCb-1429, similar to peroxiredoxin V (PrxV) gene			Mus musculus brain cDNA, clone MNCb-1429, similar to Mus musculus peroxiredoxin V (PrxV) gene	BG085276	Mm.30215	Energy/Metabolism	

2424 2425	H3111A08	"Mus musculus signal transducer and transcription activator 5a (Stat5a) gene, partial cds"	"Mus musculus arginase type II (Arg2), mRNA, complete cds"	BG085280		Signal Transduction
2426 2427	H3111F09	Rat Y-b3 glutathione-S-transferase	Rat Y-b3 glutathione-S-transferase mRNA, complete cds	BG072517	Mm.29640	Energy/Metabolism
2428 2429	H3111G06	arginase type II (Arg2),	Mus musculus arginase type II (Arg2), mRNA	BG085317	Mm.3506	Energy/Metabolism
2430 2431	H3111G12	zinc transporter like 2 (Znt12)	Mus musculus zinc transporter like 2 (Znt12) mRNA, complete cds	BG085322	Mm.28490	Energy/Metabolism
2432 2433	H3112A04	Mus musculus carnitine palmitoyltransferase 2 (Cpt2), mRNA		BG085333	Mm.29499	Matrix/Structural Proteins
2434 2435	H3112B05	"Homo sapiens calcium-regulated heat-stable protein (24kD) (CRHSP-24), mRNA"		BG072550	Mm.33981	Heat Shock/Stress
2436 2437	H3112B07	Rat mRNA for 3-oxoacyl-CoA thiolase		BG085346	Mm.142498	Energy/Metabolism
2438 2439	H3112F06	"Mus musculus Cctb gene for chaperonin containing TCP-1 beta subunit, complete cds"		BG085384	Mm.3670	Heat Shock/Stress
2440 2441	H3112G09	Mus musculus ATPase, H ⁺ transporting, lysosomal (vacuolar proton pump), 42 kDa (Atp6d), mRNA		BG085399	Mm.1081	Energy/Metabolism
2442 2443	H3113B07	13kDa differentiation-associated protein (LOC55967),	Homo sapiens 13kDa differentiation-associated protein (LOC55967), mRNA	BG085428	Mm.27886	Energy/Metabolism

2444	H3113B08	F1F0ATP synthase complex E subunit (Atp5k) gene	Mus musculus F1F0ATP synthase complex E subunit (Atp5k) gene, complete cds		Mm.19370	Energy/Metabolism
2445						
2446						
2447	H3113E03	"Mus musculus MAP kinase-interacting serine/threonine kinase 2 (Mknk2), mRNA"		BG085457	Mm.6797	Signal Transduction
2448						
2449	H3113F04	"Mus musculus kappaB-Ras1 mRNA, complete cds"		BG072675	Mm.25648	Signal Transduction
2450						
2451	H3113F06	ribonuclease/angiogenin inhibitor (RNH),	Homo sapiens ribonuclease/angiogenin inhibitor (RNH), mRNA	BG085471	Mm.6586	Energy/Metabolism
2452						
2453	H3113G07	"Homo sapiens phospholipase C, gamma 2 (phosphatidylinositol-specific) (PLCG2), mRNA"		BG085484	Mm.22370	Signal Transduction
2454						
2455	H3113G08	ornithine decarboxylase antizyme 3 (Oaz3),	Mus musculus ornithine decarboxylase antizyme 3 (Oaz3), mRNA	BG085485	Mm.154432	Energy/Metabolism
2456						
2457	H3113H12	"Mus musculus manic fringe homolog (Mfng), mRNA"		BG072704	Mm.517	Signal Transduction
2458						
2459	H3114A05	glutathione peroxidase 4 (Gpx4),	Mus musculus glutathione peroxidase 4 (Gpx4), mRNA	BG072706	Mm.2400	Energy/Metabolism
2460						
2461	H3114A06	spermidine/spermine N1-acetyl transferase (Sat),	Mus musculus spermidine/spermine N1-acetyl transferase (Sat), mRNA	BG085499	Mm.2734	Energy/Metabolism
2462						
2463	H3114C12	cytosolic class 3 aldehyde dehydrogenase (Aldh4) gene, 5 flanking region sequence	Mus musculus cytosolic class 3 aldehyde dehydrogenase (Aldh4) gene, 5 flanking region sequence	BG085522	Mm.14798	Energy/Metabolism
2464						
2465	H3114D10	M.musculus RPS3a gene	M.musculus RPS3a gene	BG072742	Mm.6957	Apoptosis

2466									
2467	H3114F11	Mus musculus interferon gamma receptor 2 (Ifngr2), mRNA				BG085554	Mm.153463	Signal Transduction	
2468									
2469	H3114G12	"Mus musculus copper chaperone for superoxide dismutase (Ccsd) mRNA, complete cds"				BG072776	Mm.21414	Heat Shock/Stress	
2470									
2471	H3114H06	PIG-M mannosyltransferase			Rattus norvegicus PIG-M mRNA for mannosyltransferase, complete cds	BG085572	Mm.26612	Energy/Metabolism	
2472	H3115A05	"Mus musculus phospholipase C, delta mRNA"				BG085579	Mm.23963	Signal Transduction	
2473									
2474	H3115B07	Mus musculus S100A9 gene for S100A9 protein exons 1-3				BG072801	Mm.2128	Signal Transduction	
2475									
2476	H3115C02	clone UWGC:mbac82 from 14D1-D2 (T-Cell Receptor Alpha Locus), complete sequence			Mus musculus clone UWGC:mbac82 from 14D1-D2 (T-Cell Receptor Alpha Locus), complete sequence	BG072808	Mm.353	Energy/Metabolism	
2477									
2478	H3115C11	"Mus musculus protein phosphatase 2A B'alpha3 regulatory subunit mRNA, partial cds"				BG072817	Mm.3785	Signal Transduction	
2479									
2480	H3115D08	F1F0-ATP synthase, g subunit			Mus musculus mRNA for F1F0-ATP synthase, g subunit	BG072826	Mm.14663	Energy/Metabolism	
2481									
2482	H3115H06	ribosomal protein L29					Mm.2235	Energy/Metabolism	
2483									
2484	H3115H10	ATP synthase gamma-subunit precursor			Mus musculus mRNA for ATP synthase gamma-subunit precursor, complete cds	BG072870	Mm.12677	Energy/Metabolism	
2485									
2486	H3116D11	cytochrome c oxidase, subunit VIIa 3 (Cox7a3), mRNA			Mus musculus cytochrome c oxidase, subunit VIIa 3 (Cox7a3), mRNA	BG072912	Mm.2151	Energy/Metabolism	

2487									
2488	H3116E02	"Mus musculus adenylate cyclase activating polypeptide 1 receptor 1 (Adeyap1r1), mRNA"				BG085699	Mm.44245	Signal Transduction	
2489								Energy/Metabolism	
2490	H3116G12								
2491									
2492	H3117A12	kinesin-related mitotic motor protein			Mus musculus mRNA for kinesin-related mitotic motor protein		Mm.42203		
2493									
2494	H3117C04	"Homo sapiens MEBP-1 mRNA for MAPK-ERK binding protein-1, complete cds"				BG072981	Mm.6803	Heat Shock/Stress	
2495									
2496	H3117G06	Rat glycogen phosphorylase brain isozyme, 5 end of cds			Rat glycogen phosphorylase brain isozyme mRNA, 5 end of cds	BG073025	Mm.30072	Energy/Metabolism	
2497									
2498	H3118E12	apoptosis inhibitor bcl-x (bcl-x) gene, exon 3 and cds			Mus musculus apoptosis inhibitor bcl-x (bcl-x) gene, exon 3 and complete cds	AW548292	Mm.148197	Apoptosis	
2499	H3118H09	mastocytoma N-deacetylase/N-sulfotransferase (Mndns), mRNA			Mus musculus mastocytoma N-deacetylase/N-sulfotransferase (Mndns), mRNA	BG085858	Mm.4084	Energy/Metabolism	
2500									
2501	H3119A04	H+ ATP synthase subunit c			Mus musculus H+ ATP synthase subunit c mRNA, complete cds	BG085863	Mm.258	Energy/Metabolism	
2502								Heat Shock/Stress	
2503	H3119B04								
2504									
2505	H3119B06	Na, K-ATPase beta-3 subunit (Atp1b3) gene, exon 7 and cds			Mus musculus Na, K-ATPase beta-3 subunit (Atp1b3) gene, exon 7 and complete cds	BG073136	Mm.424	Energy/Metabolism	
2506									
2507	H3119B09	cytochrome b-561 (Cyb561),			Mus musculus cytochrome b-561 (Cyb561), mRNA	BG085878	Mm.18942	Energy/Metabolism	

2508			"Mus musculus protein tyrosine						
2509	H3119G03		phosphatase 4a1 (Ptp4a1), mRNA"			BG073186	Mm.28909	Signal Transduction	
2510			glutathione S-transferase, alpha 4						
2511	H3119G08		(Gsta4), Mus musculus glutathione S-transferase, alpha 4 (Gsta4), mRNA			BG073190	Mm.2662	Energy/Metabolism	
2512			cDNA DKFZp564A126 (from clone						
2513	H3119G12		DKFZp564A126); partial cds			BG085933	Mm.22710	Energy/Metabolism	
2514			Mus musculus FVB/N collagen pro-						
2515	H3119H03		alpha-1 type I chain mRNA, complete cds			BG073196	Mm.22621	Matrix/Structural Proteins	
2516			fatty-acid-Coenzyme A ligase, long-						
2517	H3119H04		chain 3 (FACL3), Homo sapiens fatty-acid-Coenzyme A ligase, long-chain 3 (FACL3), mRNA			BG073197	Mm.27944	Energy/Metabolism	
2518			"Homo sapiens casein kinase 1, gamma						
2519	H3119H06		2 (CSNK1G2), mRNA"			BG085938	Mm.29873	Signal Transduction	
2520			isocitrate dehydrogenase						
2521	H3120A10		Mus musculus isocitrate dehydrogenase mRNA, complete cds			BG085953	Mm.2966	Energy/Metabolism	
2522			"Mus musculus MEK kinase 3, mRNA,						
2523	H3120D01		partial cds"			BG085978	Mm.27041	Signal Transduction	
2524			geranylgeranyl diphosphate synthase 1						
2525	H3120F08		(Ggps1), Mus musculus geranylgeranyl diphosphate synthase 1 (Ggps1), mRNA			BG086008	Mm.4076	Energy/Metabolism	
2526			full length insert cDNA clone ZC24D06						
2527	H3120H05		Homo sapiens full length insert cDNA clone ZC24D06			BG086026		Energy/Metabolism	
2528			protein phosphatase type-1 catalytic						
2529	H3121A04		subunit delta isom (PPCS1D) Homo sapiens protein phosphatase type-1 catalytic subunit delta isoform (PPCS1D) mRNA, complete cds			BG086037	Mm.4572	Energy/Metabolism	

2530	H3121C02	"Mus musculus follistatin-like (Fstl), mRNA"		BG086054	Mm.22763	Signal Transduction
2531		retinal short-chain dehydrogenase/reductase 1 (Rsdr1-pending), mRNA	Mus musculus retinal short-chain dehydrogenase/reductase 1 (Rsdr1-pending), mRNA			
2532	H3121E04			BG086076	Mm.14063	Energy/Metabolism
2533						
2534	H3122B07	"Mus musculus heat-responsive protein 12 (Hrsp12), mRNA"		BG073398	Mm.2607	Heat Shock/Stress
2535						
2536	H3122D07	"Mus musculus heat shock protein, 74 kDa, A (Hspa9a), mRNA"		BG073420	Mm.2849	Heat Shock/Stress
2537						
2538	H3122E12	ATP synthase beta subunit (ATPSB) gene	Human ATP synthase beta subunit (ATPSB) gene, complete cds	BG073436	Mm.17869	Energy/Metabolism
2539						
2540	H3122F01	ATP synthase beta subunit (ATPSB) gene	Human ATP synthase beta subunit (ATPSB) gene, complete cds	BG073437	Mm.17869	Energy/Metabolism
2541						
2542	H3122F04	ATP-binding cassette, sub-family D (ALD), member 4 (Abcd4), mRNA	Mus musculus ATP-binding cassette, sub-family D (ALD), member 4 (Abcd4), mRNA	BG086172	Mm.87806	Energy/Metabolism
2543						
2544	H3122F12	sterol-carrier protein X	Mus musculus sterol-carrier protein X mRNA, complete cds	BG086180	Mm.1779	Matrix/Structural Proteins
2545						
2546	H3122G01	sterol-carrier protein X	Mus musculus sterol-carrier protein X mRNA, complete cds	BG086181	Mm.1779	Matrix/Structural Proteins
2547						
2548	H3122H03	brain cDNA, clone MNCb-0663, similar to augment of liver regeneration (Alr)	Mus musculus brain cDNA, clone MNCb-0663, similar to Mus musculus augment of liver regeneration (Alr) mRNA	BG086194	Mm.28124	
2549						
2550	H3123C04	"Mus musculus GNB3 gene for GTP-binding protein beta3 subunit, complete cds"		BG073494	Mm.35708	Signal Transduction
2551						

2552	H3123D10	BCL2/adenovirus E1B 19kD-interacting protein 1 (BNIP1),	Homo sapiens BCL2/adenovirus E1B 19kD-interacting protein 1 (BNIP1), mRNA	BG073508	Mm.21795	Apoptosis
2553		mannoside acetylglucosaminyltransferase 1 (Mgat1), mRNA	Mus musculus mannoside acetylglucosaminyltransferase 1 (Mgat1), mRNA	BG073537	Mm.2672	Energy/Metabolism
2554	H3123G10	"Homo sapiens tumor protein p53-binding protein, 2 (TP53BP2), mRNA"		BG086271	Mm.23595	Signal Transduction
2555		novel cell death-regulatory protein GRIM19 (Grim19)	Mus musculus novel cell death-regulatory protein GRIM19 (Grim19) mRNA, complete cds	BG086273	Mm.21162	Apoptosis
2556	H3123H05	"Mus musculus cold inducible RNA-binding protein (Cirbp), mRNA"		BG086286	Mm.17898	Heat Shock/Stress
2557	H3124D02	ferrochelatase (Fech),	Mus musculus ferrochelatase (Fech), mRNA	BG086309	Mm.1070	Energy/Metabolism
2558	H3124D04	caspase 9 (Casp9),	Mus musculus caspase 9 (Casp9), mRNA	BG086310	Mm.102926	Apoptosis
2559		DNA fragmentation factor, 40 kD, beta subunit (Dffb),	Mus musculus DNA fragmentation factor, 40 kD, beta subunit (Dffb), mRNA	BG086312	Mm.38853	Apoptosis
2560	H3124D06	mitotic arrest deficient 1-like 1 (Mad1l1),	Mus musculus mitotic arrest deficient 1-like 1 (Mad1l1), mRNA		Mm.27250	Cell Cycle
2561		hepatocyte growth factor-like protein gene	Mouse hepatocyte growth factor-like protein gene, complete cds	BG073592	Mm.21989	Energy/Metabolism
2562	H3124E02	microsomal glutathione S-transferase (Gst),	Mus musculus microsomal glutathione S-transferase (Gst), mRNA	BG086330	Mm.14796	Energy/Metabolism

2574 2575	H3124H01	NADH dehydrogenase (ubiquinone) 1 beta subcomplex, 10 (22kD, PDSW) (NDUFB10),	Homo sapiens NADH dehydrogenase (ubiquinone) 1 beta subcomplex, 10 (22kD, PDSW) (NDUFB10), mRNA	BG086348	Mm.8688	Energy/Metabolism
2576 2577	H3125A06	"Mus musculus glycogen synthase kinase 3 beta (Gsk3b), mRNA"		BG086363		Signal Transduction
2578 2579	H3125A09	glutathione peroxidase 3 (Gpx3),	Mus musculus glutathione peroxidase 3 (Gpx3), mRNA	BG073718	Mm.7156	Energy/Metabolism
2580 2581	H3125B05	"Homo sapiens heat shock transcription factor 2 binding protein (HSF2BP), mRNA"		BG086370	Mm.75856	Heat Shock/Stress
2582 2583	H3125C08	ribonuclease III (RN3)	Homo sapiens ribonuclease III (RN3) mRNA, complete cds	BG086378		Energy/Metabolism
2584 2585	H3125C10	major histocompatibility locus class III regions Hsc70t gene, partial cds; smRNP, G7A, NG23, MutS homolog, CLCP, NG24, NG25, and NG26 genes; and unknown genes	Mus musculus major histocompatibility locus class III regions Hsc70t gene, partial cds; smRNP, G7A, NG23, MutS homolog, CLCP, NG24, NG25, and NG26 genes, complete cds; and unknown genes	BG086380	Mm.1457	Energy/Metabolism
2586 2587	H3125D09	"Homo sapiens suppression of tumorigenicity 13 (colon carcinoma) (Hsp70-interacting protein) (ST13), mRNA"		BG086389	Mm.4908	Heat Shock/Stress
2588 2589	H3125E01	cytosolic acyl coenzyme A thioester hydrolase (HBACH),	Homo sapiens cytosolic acyl coenzyme A thioester hydrolase (HBACH), mRNA	BG086391	Mm.142740	Energy/Metabolism
2590 2591	H3125F03	thioredoxin (Txn),	Mus musculus thioredoxin (Txn), mRNA	BG086400	Mm.1275	Energy/Metabolism

140

2612				Mus musculus protein-L-isoaspartate (D-aspartate) O-methyltransferase 1 (Pemt1), mRNA	BG086679	Mm.25169	Energy/Metabolism
2613	H3129C06	protein-L-isoaspartate (D-aspartate) O-methyltransferase 1 (Pemt1),					
2614		"Homo sapiens candidate tumor suppressor p33 ING1 homolog					
2615	H3129D08	(LOC51147), mRNA"			BG086692	Mm.43482	Signal Transduction
2616							
2617	H3129E06	OXA1L gene sequence		Homo sapiens OXA1L gene complete sequence	BG086699	Mm.142455	Apoptosis
2618							
2619	H3129E10	"Mus musculus Pro-rich, PH, SH2 domain-containing signaling mediator (PSM) mRNA, complete cds"			BG086702	Mm.8538	Signal Transduction
2620							
2621	H3129E12	Mus musculus IFN alpha-treated embryonic fibroblast mRNA			BG086704	Mm.23836	Heat Shock/Stress
2622							
2623	H3129F04	clone TA-9 ATP synthase b chain homolog, partial cds		Mus musculus clone TA-9 ATP synthase b chain homolog mRNA, partial cds		Mm.30112	Energy/Metabolism
2624							
2625	H3129G02	serine palmitoyltransferase, long chain base subunit 1 (Sptlc1),		Mus musculus serine palmitoyltransferase, long chain base subunit 1 (Sptlc1), mRNA	BG074002	Mm.6505	Energy/Metabolism
2626							
2627	H3129G06	peroxisomal assembly protein PEX3P (Pex3) gene, promoter and exon 1		Mus musculus peroxisomal assembly protein PEX3P (Pex3) gene, promoter and exon 1	BG086720		Energy/Metabolism
2628							
2629	H3129H03	hydroxylacyl-Coenzyme A dehydrogenase (Hadh),		Mus musculus hydroxylacyl-Coenzyme A dehydrogenase (Hadh), mRNA	BG086728	Mm.2491	Energy/Metabolism
2630							
2631	H3129H05	K-Cl cotransporter KCC3		Homo sapiens K-Cl cotransporter KCC3 mRNA, complete cds	BG086729	Mm.21915	Energy/Metabolism
2632							
2633	H3130B10	SERCA2 gene, alternative transcripts		Mus musculus SERCA2 gene, alternative transcripts	BG074044	Mm.42255	Energy/Metabolism

2634									
2635	H3130B11	"Mouse Cu-Zn superoxide dismutase mRNA, complete cds"				BG074045	Mm.5274		Heat Shock/Stress
2636		"Mus musculus calcineurin inhibitor mRNA, complete cds, alternatively spliced"				BG086761	Mm.56		Signal Transduction
2637	H3130C02								
2638		Na,K-ATPase beta subunit (ATP1B)			Human Na,K-ATPase beta subunit (ATP1B) gene, exons 1 and 2	BG086774			Energy/Metabolism
2639	H3130D06	gene, exons 1 and 2							
2640		NADH/NADPH mitogenic oxidase			Rattus norvegicus NADH/NADPH mitogenic oxidase subunit p65-mox mRNA, complete cds		Mm.2866		
2641	H3130D08	subunit p65-mox							
2642		3-hydroxy-3-methylglutaryl-Coenzyme					Mm.10633		
2643	H3130H07	A synthase 2 mHS							
2644		"Mus musculus heat shock protein, 86							
2645	H3131A03	kDa 1 (Hsp86-1), mRNA"				BG074109	Mm.1843		Heat Shock/Stress
2646									
2647	H3131A05	ATP synthase gamma-subunit precursor			Mus musculus mRNA for ATP synthase gamma-subunit precursor, complete cds	BG074111	Mm.12677		Energy/Metabolism
2648		enoyl coenzyme A hydratase 1,			Mus musculus enoyl coenzyme A hydratase 1, peroxisomal (Ech1), mRNA				
2649	H3131A07	peroxisomal (Ech1),				BG074113	Mm.2112		Energy/Metabolism
2650									
2651	H3131A12	MA-3 (apoptosis-related gene)			Mouse MA-3 (apoptosis-related gene) mRNA, complete cds	BG086831	Mm.26035		Apoptosis
2652					Mus musculus sterol-carrier protein X mRNA, complete cds		Mm.1779		Matrix/Structural Proteins
2653	H3131B04	sterol-carrier protein X				BG086835			
2654					Mus musculus dolichyl-di-phosphooligosaccharide-protein				
2655	H3131C10	protein glycotransferase (Ddost),			glycotransferase (Ddost), mRNA	BG074138	Mm.7236		Energy/Metabolism

2656			solute carrier family 39 (iron-regulated transporter), member 1 (Slc39a1), mRNA	Mus musculus solute carrier family 39 (iron-regulated transporter), member 1 (Slc39a1), mRNA	BG074144	Mm.28756	Energy/Metabolism
2657		H3131D05					
2658		H3131G02	caspase 12 (Casp12),	Mus musculus caspase 12 (Casp12), mRNA	BG086881	Mm.42163	Apoptosis
2659		H3131H01	H.sapiens gene for rho GDP dissociation inhibitor (GDI)		BG086892	Mm.30016	Signal Transduction
2660							
2661		H3132C10	"Mus musculus neuroblastoma ras oncogene (Nras), mRNA"		BG086925	Mm.734	Signal Transduction
2662							
2663		H3132F06	"Homo sapiens pleiomorphic adenoma gene-like 2 (PLAGL2), mRNA"		BG074245	Mm.23923	Signal Transduction
2664							
2665							
2666			"Homo sapiens ER-associated DNAJ; ER-associated Hsp40 co-chaperone; hDj9; ERj3 (LOC51726), mRNA"				
2667		H3132G04		Homo sapiens vacuolar ATPase subunit H mRNA, complete cds	BG086956	Mm.37516	Heat Shock/Stress
2668							
2669		H3132G09	vacuolar ATPase subunit H		BG086960	Mm.27082	Energy/Metabolism
2670							
2671		H3132H07	"Mus musculus tumor susceptibility protein 101 (tsg101) gene, complete cds"		BG086965	Mm.22688	Signal Transduction
2672							
2673		H3133A06	glutathione S-transferase, mu 1 (Gstm1), mu 1 (Gstm1), mRNA	Mus musculus glutathione S-transferase, mu 1 (Gstm1), mRNA	BG086970	Mm.2011	Energy/Metabolism
2674							
2675		H3133B05	cytochrome c oxidase subunit Vlb (COX6B),	Homo sapiens cytochrome c oxidase subunit Vlb (COX6B), mRNA	BG074277	Mm.400	Energy/Metabolism
2676							
2677		H3133C08	"Mus musculus RAB7, member RAS oncogene family (Rab7), mRNA"		BG086994	Mm.4268	Signal Transduction

2678								
2679	H3133D04	NADH dehydrogenase (ubiquinone) flavoprotein 2 (24kD) (NDUFV2),			Homo sapiens NADH dehydrogenase (ubiquinone) flavoprotein 2 (24kD) (NDUFV2), mRNA	BG087002	Mm.2206	Energy/Metabolism
2680								
2681	H3133D06						Mm.21535	Heat Shock/Stress
2682								
2683	H3133E07	glycine amidinotransferase (L-arginine:glycine amidinotransferase) (GATM),			Homo sapiens glycine amidinotransferase (L-arginine:glycine amidinotransferase) (GATM), mRNA	BG087011	Mm.29975	Energy/Metabolism
2684								
2685	H3133H01	"Mus musculus heat shock 70 protein (Hsc70) gene, complete cds"				BG087043	Mm.2144	Heat Shock/Stress
2686								
2687	H3133H05	M. musculus arylsulfatase A			M. musculus mRNA for arylsulfatase A	BG087046	Mm.620	Energy/Metabolism
2688								
2689	H3133H07	voltage-dependent anion channel 3 (Vdac3),			Mus musculus voltage-dependent anion channel 3 (Vdac3), mRNA	BG087048	Mm.133962	Energy/Metabolism
2690								
2691	H3134C07	DNA, DLEC1 to ORCTL4 gene region, section 1/2 (DLEC1, ORCTL3, ORCTL4 genes)			Homo sapiens DNA, DLEC1 to ORCTL4 gene region, section 1/2 (DLEC1, ORCTL3, ORCTL4 genes, complete cds)	BG087037	Mm.42275	Energy/Metabolism
2692								
2693	H3134D06	GrpE-like 2, mitochondrial mt-GrpE#2					Mm.12959	Heat Shock/Stress
2694								
2695	H3135A03	NADH dehydrogenase (ubiquinone) 1 alpha subcomplex, 8 (19kD, PGIV) (NDUFA8),			Homo sapiens NADH dehydrogenase (ubiquinone) 1 alpha subcomplex, 8 (19kD, PGIV) (NDUFA8), mRNA	BG087056	Mm.19834	Energy/Metabolism
2696								
2697	H3135B06	cDNA DKFZp434D175 (from clone DKFZp434D175); partial cds			Homo sapiens mRNA; cDNA DKFZp434D175 (from clone DKFZp434D175); partial cds	BG087066	Mm.30110	Energy/Metabolism
2698								
2699	H3135B10	"Mus musculus PL-6 (P16), mRNA"				BG087070	Mm.27312	Signal Transduction

2700	H3135D06	galactose-1-phosphate uridylyltransferase (GALT) gene	Mus musculus galactose-1-phosphate uridylyltransferase (GALT) gene, complete cds	BG087088	Mm.2420	Energy/Metabolism
2701						
2702	H3135F04	Mm.87124			Mm.87124	Energy/Metabolism
2703						
2704	H3135F06					Heat Shock/Stress
2705						
2706	H3135G03	serine protease inhibitor 3 (Spi3),	Mus musculus serine protease inhibitor 3 (Spi3), mRNA	BG087117	Mm.2623	Energy/Metabolism
2707						
2708	H3135G07	protoporphyrinogen oxidase (Ppox),	Mus musculus protoporphyrinogen oxidase (Ppox), mRNA	BG087120	Mm.4730	Energy/Metabolism
2709						
2710	H3135H04	rhodanese (Tst)	Mus musculus rhodanese (Tst) mRNA, complete cds		Mm.15312	
2711						
2712	H3135H10	D-dopachrome tautomerase gene	Mus musculus D-dopachrome tautomerase gene, complete cds	BG087134	Mm.5731	Energy/Metabolism
2713						
2714	H3136A06	calcium-sensitive chloride conductance protein-1 (mCLCA1)	Mus musculus calcium-sensitive chloride conductance protein-1 (mCLCA1) mRNA, complete cds	BG087141	Mm.20897	Energy/Metabolism
2715						
2716	H3136B09	branched chain ketoacid dehydrogenase E1, alpha polypeptide (Bckdha),	Mus musculus branched chain ketoacid dehydrogenase E1, alpha polypeptide (Bckdha), mRNA	BG087153	Mm.25848	Energy/Metabolism
2717						
2718	H3136C07	BCL2/adenovirus E1B 19 kDa-interacting protein 1, NIP3, (Bnip3),	Mus musculus BCL2/adenovirus E1B 19 kDa-interacting protein 1, NIP3 (Bnip3), mRNA	BG087162	Mm.2159	Apoptosis
2719						
2720	H3136D05	serine protease	Mus musculus serine protease mRNA, complete cds	BG087171	Mm.24276	Energy/Metabolism
2721						
2722	H3136E12	gene uncoupling protein-2	Mus musculus gene for uncoupling protein-2, complete cds		Mm.144413	
2723						
2724	H3136F07	guanine monophosphate synthetase (GMPS),	Homo sapiens guanine monophosphate synthetase (GMPS), mRNA	BG087194	Mm.28299	Energy/Metabolism

2725	H3136F10	serine protease inhibitor 3 (Spi3),	Mus musculus serine protease inhibitor 3 (Spi3), mRNA	BG087196		Energy/Metabolism
2726						
2727		solute carrier family 12, member 2	Mus musculus solute carrier family 12, member 2 (Slc12a2), mRNA	BG074576	Mm.4168	Energy/Metabolism
2728	H3136G10	(Slc12a2),				
2729		"Mus musculus IkB kinase-beta (Ikkb)		BG087220	Mm.28269	Signal Transduction
2730	H3136H12	mRNA, complete cds"				
2731			Mus musculus pyruvate decarboxylase (Pcx), mRNA	BG087228	Mm.1845	Energy/Metabolism
2732	H3137A09	pyruvate decarboxylase (Pcx),				
2733			Mus musculus ornithine aminotransferase (Oat), mRNA	BG087236	Mm.13694	Energy/Metabolism
2734	H3137B06	ornithine aminotransferase (Oat),				
2735		"Homo sapiens Rho guanine nucleotide exchange factor (GEF) 4 (ARHGEF4), mRNA"		BG087239	Mm.41604	Signal Transduction
2736	H3137B09					
2737		ATP-binding cassette, sub-family A	Homo sapiens ATP-binding cassette, sub-family A (ABC1), member 3 (ABCA3), mRNA	BG087249	Mm.38313	Energy/Metabolism
2738	H3137C10	(ABC1), member 3 (ABCA3),				
2739		ATP-binding cassette, sub-family E	Mus musculus ATP-binding cassette, sub-family E (OABP), member 1 (Abce1), mRNA	BG087256	Mm.5831	Energy/Metabolism
2740	H3137D07	(OABP), member 1 (Abce1),				
2741		VLCAD gene	Mus musculus VLCAD gene	BG074630	Mm.18630	Energy/Metabolism
2742	H3137D08					
2743		solute carrier family 4 (anion	Mus musculus solute carrier family 4 (anion exchanger), member 2 (Slc4a2), mRNA	BG074631	Mm.4580	Energy/Metabolism
2744	H3137D09	exchanger), member 2 (Slc4a2),				
2745		NADH dehydrogenase (ubiquinone) Fe-	Homo sapiens NADH dehydrogenase (ubiquinone) Fe-S protein 2 (49kD) (NADH-coenzyme Q reductase) (NDUFS2), mRNA	BG087262	Mm.21669	Energy/Metabolism
2746	H3137E02	Q reductase) (NDUFS2),				

2747	H3137E03	anion exchanger 3 brain and anion exchanger 3 cardiac isoforms (Slc4a3) gene, alternatively spliced	Mus musculus anion exchanger 3 brain and anion exchanger 3 cardiac isoforms (Slc4a3) gene, complete cds, alternatively spliced	BG074636	Mm.5053	Energy/Metabolism
2749	H3137G05	ribosomal protein L17 isolog (LOC63875),	Homo sapiens ribosomal protein L17 isolog (LOC63875), mRNA	BG087283	Mm.44225	Energy/Metabolism
2751	H3137G09	Mouse mRNA for protein tyrosine phosphatase PTP9		BG087286	Mm.4220	Signal Transduction
2753	H3138B02	neuronal apoptosis inhibitory protein 6 (Naip6) gene; and Naip3 gene, exons 2-9 and 11-16	Mus musculus neuronal apoptosis inhibitory protein 6 (Naip6) gene, complete cds; and Naip3 gene, exons 2-9 and 11-16	BG087312	Mm.13437	Apoptosis
2755	H3138C04	phosphoglucomutase 1 (PGM1),	Homo sapiens phosphoglucomutase 1 (PGM1), mRNA	BG087325	Mm.22403	Energy/Metabolism
2757	H3138D04	hypothetical protein FLJ10545 (FLJ10545),	Homo sapiens hypothetical protein FLJ10545 (FLJ10545), mRNA	BG074710	Mm.9870	Energy/Metabolism
2759	H3138D07	voltage-dependent anion channel 2 (Vdac2),	Mus musculus voltage-dependent anion channel 2 (Vdac2), mRNA	BG087336	Mm.569	Energy/Metabolism
2761	H3138E10	aldehyde dehydrogenase 5 (ALDH5),	Homo sapiens aldehyde dehydrogenase 5 (ALDH5), mRNA	BG087349	Mm.24457	Energy/Metabolism
2763	H3138F05	ADP-ribosylation factor 4 (Arf4),	Mus musculus ADP-ribosylation factor 4 (Arf4), mRNA	BG087356	Mm.1486	Energy/Metabolism
2765	H3138G02	solute carrier family 22 (organic cation transporter), member 5 (Slc22a5),	Mus musculus solute carrier family 22 (organic cation transporter), member 5 (Slc22a5), mRNA	BG087364	Mm.42253	Energy/Metabolism

2767			alpha glucosidase 2, alpha neutral	Mus musculus alpha glucosidase 2, alpha neutral subunit (G2an), mRNA	BG087370	Mm.3196	Energy/Metabolism
2768	H3138G09		subunit (G2an),				
2769				Homo sapiens mRNA for long-chain acyl-CoA synthetase, complete cds	BG074754	Mm.28962	Energy/Metabolism
2770	H3138H04		long-chain acyl-CoA synthetase				
2771				Human 78 kDa gastrin-binding protein mRNA, complete cds	BG087380	Mm.16773	Energy/Metabolism
2772	H3138H07		78 kDa gastrin-binding protein				
2773					BG087383	Mm.2147	Signal Transduction
2774	H3138H10		M. musculus mRNA for cathepsin D				
2775			"Mus musculus protein tyrosine phosphatase, non-receptor type 13				
2776	H3139B06		interacting protein (Ptpn13ip), mRNA"		BG087401	Mm.5400	Signal Transduction
2777				Mus musculus ubi-d4/requiem gene, exons 2 through 11 and partial cds	BG087408	Mm.2651	Apoptosis
2778	H3139C01		ubi-d4/requiem gene, exons 2 through 11 and partial cds				
2779					BG087426		Heat Shock/Stress
2780	H3139E01		"Mus musculus heat shock 70 protein (Hsc70) gene, complete cds"				
2781				Mus musculus sterol O-acyltransferase 1 (Soat1), mRNA	BG087432	Mm.28099	Energy/Metabolism
2782	H3139F01		sterol O-acyltransferase 1 (Soat1),				
2783			solute carrier family 9 (sodium/hydrogen exchanger), member 1 (Slc9a1), mRNA				
2784	H3140A02		1 (Slc9a1),		BG087460	Mm.4312	Energy/Metabolism
2785							
2786	H3140A08		"Mus musculus mitogen activated protein kinase 14 (Mapk14), mRNA"		BG087465	Mm.4437	Signal Transduction

2787		CPT I=carnitine palmitoyltransferase I {3 region} [mice, JVS, hearts, Partial, H3140A09] 678 nt, segment 1 of 2]	CPT I=carnitine palmitoyltransferase I {3 region} [mice, JVS, hearts, mRNA Partial, 678 nt, segment 1 of 2]		Mm.18522	Energy/Metabolism
2788						
2789		major histocompatibility locus class III region:butyrophilin-like protein gene, partial cds; Notch4, PBX2, RAGE, lysophatidic acid acyl transferase-alpha, H3140B07] palmitoyl-protein thioestera	Mus musculus major histocompatibility locus class III region:butyrophilin-like protein gene, partial cds; Notch4, PBX2, RAGE, lysophatidic acid acyl transferase-alpha, palmitoyl-protein thioestera		Mm.1511	
2790						
2791		H3140C11] clone RP11-486I22, sequence	Homo sapiens clone RP11-486I22, complete sequence	BG074864	Mm.3479	Energy/Metabolism
2792						
2793		ectonucleotide pyrophosphatase/phosphodiesterase 5 (putative function) (ENPP5),	Homo sapiens ectonucleotide pyrophosphatase/phosphodiesterase 5 (putative function) (ENPP5), mRNA	BG087491	Mm.30145	Energy/Metabolism
2794						
2795		H3140D07] peroxiredoxin 3 (Prdx3),	Mus musculus peroxiredoxin 3 (Prdx3), mRNA	BG087493	Mm.29821	Energy/Metabolism
2796						
2797		electron-transfer-flavoprotein, alpha polypeptide (glutaric aciduria II) (ETFA),	Homo sapiens electron-transfer- flavoprotein, alpha polypeptide (glutaric aciduria II) (ETFA), mRNA	BG087498	Mm.26949	Energy/Metabolism
2798						
2799		H3140E04] protein tyrosine phosphatase (70zshp)	Mouse protein tyrosine phosphatase (70zshp) mRNA, complete cds	BG074880	Mm.1484	Energy/Metabolism
2800						
2801		H3140E08] glutamate dehydrogenase (Glucl),	Mus musculus glutamate dehydrogenase (Glucl), mRNA	BG087506	Mm.10600	Energy/Metabolism
2802						
2803		solute carrier family 12, member 7 (Slc12a7),	Mus musculus solute carrier family 12, member 7 (Slc12a7), mRNA	BG087669	Mm.24510	Energy/Metabolism
2804						

2805	H3141G03	chs HMG CoA synthase , partial cds	Mus musculus chs HMG CoA synthase mRNA, partial cds	BG087678	Mm.10633	Matrix/Structural Proteins
2806						
2807		"Mus musculus protein phosphatase 2a, catalytic subunit, beta isoform (Ppp2cb), mRNA"				
2808	H3142A02			BG087694	Mm.7418	Signal Transduction
2809						
2810	H3142A08	ubiquinol-cytochrome c reductase core protein II (UQCRC2), mRNA	Homo sapiens ubiquinol-cytochrome c reductase core protein II (UQCRC2), mRNA	BG075002	Mm.988	Energy/Metabolism
2811						
2812	H3142E09	"Mus musculus tumor-suppressing subchromosomal transferable fragment 4 (Tssc4), mRNA"		BG087715	Mm.139675	Signal Transduction
2813	H3142G01				Mm.31203	Heat Shock/Stress
2814						
2815	H3142G02	methylenetetrahydrofolate dehydrogenase (NADP+ dependent), methenyltetrahydrofolate cyclohydrolase, myltetrahydrofolate synthetase (MTHFD1), mRNA	Homo sapiens methylenetetrahydrofolate dehydrogenase (NADP+ dependent), methenyltetrahydrofolate cyclohydrolase, formyltetrahydrofolate synthetase (MTHFD1), mRNA	BG087719	Mm.29584	Energy/Metabolism
2816						
2817	H3143D09	peroxisome membrane protein PEX2	Mus musculus peroxisome membrane protein PEX2 mRNA, complete cds	BG075110	Mm.16453	Energy/Metabolism
2818						
2819	H3143D10	"Mouse cAMP-dependent protein kinase alpha subunit gene, exon 10"		BG075111	Mm.19111	Signal Transduction
2820						
2821	H3143D12	presenilin-associated protein	Homo sapiens presenilin-associated protein mRNA, complete cds	BG087589	Mm.29650	Energy/Metabolism

2822	H3143H07	"Mus musculus osmotic stress protein 94 (Osp94) mRNA, complete cds"		BG075154	Mm.4150	Heat Shock/Stress
2823						
2824						
2825	H3144B03	NADH-ubiquinone dehydrogenase 1 beta subcomplex mRNA, complete cds	Homo sapiens NADH-ubiquinone dehydrogenase 1 beta subcomplex mRNA, complete cds	BG087636	Mm.4537	Energy/Metabolism
2826						
2827	H3144C01	glyoxalase I (GLO1),	Homo sapiens glyoxalase I (GLO1), mRNA	BG087642	Mm.17362	Energy/Metabolism
2828						
2829	H3144C11	"Mus musculus heat shock 70kD protein 5 (glucose-regulated protein, 78kD) (Hspa5), mRNA"		BG087650	Mm.24162	Heat Shock/Stress
2830	H3144E06	neuronal cell death related gene in neuron -7 (DN-7)	Rattus norvegicus neuronal cell death related gene in neuron -7 (DN-7) mRNA, complete cds	AW555571	Mm.19440	Apoptosis
2831						
2832	H3144F09	"Homo sapiens RAB7, member RAS oncogene family-like 1 (RAB7L1), mRNA"		BG075214	Mm.34027	Signal Transduction
2833						
2834	H3144G02	"Homo sapiens phosphodiesterase 5A, cGMP-specific (PDE5A), mRNA"		BG087768	Mm.103149	Signal Transduction
2835						
2836	H3144H01	mitofilin, partial cds	Homo sapiens mitofilin mRNA, partial cds		Mm.10706	
2837						
2838	H3145A03	"Mus musculus partial Prkar1a gene for cAMP-dependent protein kinase regulatory subunit R1alpha, exons 8-10 and 3'UTR"		BG075240	Mm.30039	Signal Transduction
2839						
2840	H3145A06	zinc transporter Znt-3 (ZnT-3)	Mus musculus zinc transporter Znt-3 (ZnT-3) mRNA, complete cds	BG075243	Mm.1396	Energy/Metabolism

2841	H3145E01	H.sapiens gene phosphate carrier	H.sapiens gene for phosphate carrier	BG075286	Mm.5246	Energy/Metabolism
2842			Mus musculus hyaluronidase 2 (Hyal2), mRNA	BG075294	Mm.4834	Energy/Metabolism
2843	H3145E12	hyaluronidase 2 (Hyal2),				Heat Shock/Stress
2844						
2845	H3145F11					
2846						
2847		M.musculus mRNA for mitogen		BG075319	Mm.8385	Signal Transduction
2848	H3145H03	activated protein kinase (erk-1)				
2849			Mus musculus peroxiredoxin 4 (Prdx4), mRNA	BG075324	Mm.19127	Energy/Metabolism
2850	H3145H09	peroxiredoxin 4 (Prdx4),				
2851			Mus musculus peroxiredoxin 4 (Prdx4), mRNA	BG087872	Mm.19127	Energy/Metabolism
2852	H3145H10	peroxiredoxin 4 (Prdx4),				
2853		"Mus musculus myo-inositol 1-phosphate synthase A1 (IsynA1) mRNA, complete cds"		BG075331	Mm.29357	Signal Transduction
2854	H3146A04					
2855		cDNA FLJ13847 fis, clone THYRO1000852, highly similar to Human branched-chain amino acid aminotransferase (ECA40)	Homo sapiens cDNA FLJ13847 fis, clone THYRO1000852, highly similar to Human branched-chain amino acid aminotransferase (ECA40) mRNA	BG087895	Mm.24210	Energy/Metabolism
2856	H3146B10	aminotransferase (ECA40)				
2857		RHOA proto-oncogene multi-drug-resistance protein, 3 end	Homo sapiens RHOA proto-oncogene multi-drug-resistance protein mRNA, 3 end	BG087931	Mm.757	Energy/Metabolism
2858	H3146F01					
2859		cDNA: FLJ22871 fis, clone KAT02533	Homo sapiens cDNA: FLJ22871 fis, clone KAT02533		Mm.30065	Energy/Metabolism
2860	H3146G06	CTL2 gene		BG087957	Mm.28209	Energy/Metabolism
2861						
2862	H3146H06					
2863		"Mus musculus RAB11B, member RAS oncogene family (Rab11b), mRNA"		BG087979	Mm.35727	Signal Transduction
2864	H3147B08					

2865	H3147D12	apoptosis inhibitory protein 5 (Api5),	Mus musculus apoptosis inhibitory protein 5 (Api5), mRNA	BG088003	Mm.692	Apoptosis
2866						
2867		"Mus musculus signal transducer and activator of transcription 3 interacting protein 1 (Stat3ip1-pending), mRNA"				
2868	H3147E03			BG088006	Mm.25298	Signal Transduction
2869						
2870	H3147E04	"Mus musculus heat shock protein, 84 kDa 1 (Hsp84-1), mRNA"		BG088007	Mm.2180	Heat Shock/Stress
2871						
2872	H3147E05	"Mus musculus heat shock protein, 84 kDa 1 (Hsp84-1), mRNA"		BG088008	Mm.2180	Heat Shock/Stress
2873						
2874	H3147E06	"Mus musculus heat shock protein, 84 kDa 1 (Hsp84-1), mRNA"		BG088009	Mm.2180	Heat Shock/Stress
2875						
2876	H3148B04	ferredoxin reductase (Fdxr),	Mus musculus ferredoxin reductase (Fdxr), mRNA	BG088056	Mm.4719	Energy/Metabolism
2877						
2878	H3148E08	ornithine decarboxylase antizyme gene	Mus musculus ornithine decarboxylase antizyme gene, complete cds	BG088091	Mm.683	Energy/Metabolism
2879						
2880	H3148F05	NADH dehydrogenase (ubiquinone) Fe-S protein 1 (75kD) S protein 1 (75kD) (NADH-coenzyme Q reductase) (NDUFS1), mRNA	Homo sapiens NADH dehydrogenase (ubiquinone) Fe-S protein 1 (75kD) (NADH-coenzyme Q reductase) (NDUFS1), mRNA	BG088100	Mm.2041	Energy/Metabolism
2881						
2882	H3148G06	"Mus musculus MgcRacGAP mRNA for GTPase activating protein, complete cds"				
2883						
2884	H3149B10	"Mus musculus protein kinase C, zeta (Pkez), mRNA"		BG088110	Mm.27141	Signal Transduction
				BG088144	Mm.28561	Signal Transduction

154

2909	H3151F06	M.musculus xanthine dehydrogenase	M.musculus mRNA for xanthine dehydrogenase	BG075778	Mm.11223	Energy/Metabolism
2910	H3152A02	Rat beta-galactoside-alpha 2,6-sialyltransferase	Rat beta-galactoside-alpha 2,6-sialyltransferase mRNA	BG075800	Mm.1944	Energy/Metabolism
2911	H3152D06	5-aminolevulinic acid synthase, 3 end	Mouse 5-aminolevulinic acid synthase mRNA, 3 end	BG088378	Mm.1217	Energy/Metabolism
2912	H3152G07	MAD2 (mitotic arrest deficient, yeast, homolog)-like 2 (MAD2L2),	Homo sapiens MAD2 (mitotic arrest deficient, yeast, homolog)-like 2 (MAD2L2), mRNA		Mm.9648	Cell Cycle
2913	H3152H05	ATPase, class II, type 9A (Atp9a),	Mus musculus ATPase, class II, type 9A (Atp9a), mRNA	BG075876	Mm.10288	Energy/Metabolism
2914	H3152H07	NADH dehydrogenase (ubiquinone) 1 beta subcomplex, 5 (NDUFB5),	Homo sapiens NADH dehydrogenase (ubiquinone) 1 beta subcomplex, 5 (16kD, SGDH) (NDUFB5), mRNA	BG088418	Mm.28058	Energy/Metabolism
2915	H3153A02	"Mus musculus calpain small subunit gene, exons 3 through 9 and partial cds"		BG088424	Mm.6534	Signal Transduction
2916	H3153A07	"Homo sapiens zinedin (ZIN), mRNA"		BG088429	Mm.21612	Signal Transduction
2917	H3153B11	Mm.666			Mm.666	Energy/Metabolism
2918	H3153C09	Mus musculus tissue inhibitor of metalloproteinase 2 (Timp2), mRNA		BG088451	Mm.19191	Matrix/Structural Proteins
2919	H3153C10	"Homo sapiens protein phosphatase 2 (formerly 2A), regulatory subunit A (PR 65), beta isoform (PPP2R1B), mRNA"				
2920	H3153D05	"Rattus norvegicus Diacylglycerol kinase 90kDa (Dagk), mRNA"		BG088452	Mm.21428	Signal Transduction

Example 3

Identification of Mutations Causing Disease

The mitochondrial respiratory complex I is assembled from seven mtDNA genes and thirty-six nDNA genes. Patients with complex I defects have phenotypes ranging from midlife-onset optic atrophy to lethal childhood Leigh's disease. Mitochondrial biology expression profiles were determined for patients with a variety of complex I defects. Samples are collected from a variety of patients with complex I defects. Each sample is reverse transcribed, labeled, and hybridized, together with standard target, to a human array comprising probes selected from Example 1. The hybridization measurements are analyzed, leading to the identification of several novel mtDNA mutations and dominant and recessive nDNA mutations.

Example 4

Profile for Complex IV Leigh's Syndrome

The mitochondrial biology expression profile was determined for a complex IV Leigh's syndrome (LS) patient. LS is a subacute neurodegenerative condition characterized

by necrotic lesions in the brain stem, basal ganglia, thalamus and spinal cord. Death is usually within 2 years of onset of symptoms that may include motor and/or intellectual retardation, abnormal breathing rhythm, nystagmus, ophthalmoparesis, optic atrophy, ataxia, and dystonia. The Leigh's syndrome patient had a typical complex IV cytochrome c oxidase deficiency associated with surfeit 1 (SURF-1) gene mutations. This patient was from a consanguineous marriage and was homozygous for a nonsense mutation in the SURF-1 gene. Expression profiling of muscle and cultured cell samples from this patient using a human array of Example 1 was performed, in comparison to a control reference standard. NDUFS8 expression was not significantly altered. However, many nuclear and mitochondrially encoded complex I genes were down-regulated, including mtDNA transcripts ND4, ND4L, and ND6. Nuclear genes SURF-1, SOD2, 70kD heat shock protein, voltage dependent anion channel (VDAC4), adenine nucleotide translocase 2 (ANT2), and glutathione peroxidase 3 were down-regulated.

Example 5

Profile for Complex I Leigh's Syndrome

Mitochondrial biology expression profiles were determined for twelve complex I Leigh's syndrome patients (Procaccio, VF (2001) EuroMit5 Abstract). Sequencing of all 43 genes known to be part of complex I, of each patient, identified one patient as a compound heterozygote for two missense mutations in the 23 kD NADH dehydrogenase (NDUFS8) gene of complex I. This patient had a respiratory complex I defect apparent in skeletal muscle and cultured lymphoblastoid cells. Samples were collected from cultured lymphoblastoid cells from this patient and control reference lymphoblastoid cells. Samples were reverse transcribed and differentially labeled and hybridized to a human array comprising probes selected from Example 1. The expression profile was determined using a hierarchical clustering method. Mitochondrial biology expression profiles from the other patients were similarly determined using appropriate samples and controls. Expression profiles of all patients were characteristic of complex I deficiencies, including down-regulation of all mtDNA and some nDNA complex I genes and up-regulation of the adenine nucleotide translocator genes (ANT1 and ANT2).

Example 6

Diagnosis of Complex IV Leigh's Syndrome

The mitochondrial biology expression profile for Leigh's syndrome SURF-1 nonsense mutations, as determined in Example 4, is used to diagnose patients. Samples are collected from patients and mitochondrial biology expression microarray-tested using a human array containing probes for at least SURF-1, ND4, ND4L, ND6, SOD2, 70kD heat shock protein, VDAC4, ANT2, and glutathione peroxidase 3.

Example 7

A Mouse MitoChip

A mouse Mitochip was printed with probes for 452 genes. Some of these genes were represented by two or more probes, providing internal controls for the reproducibility of gene expression quantitation. An additional 37 control spots were included on the array. Of these, 25 were probes for housekeeping genes to allow normalization between samples. The remaining 12 spots were various controls for hybridization and positioning. Table 2 lists the functional categories and number for all of the housekeeping genes on this array. The cDNA clones that represent each gene were either from the I.M.A.G.E. consortium or cloned by The Center for Molecular Medicine and published in (Murdock et al., 1999). A complete annotation of each gene was compiled and GenBank accession numbers and Unigene cluster numbers were determined. Table 5 provides a list of the probes on this array.

Example 8

Profile of Sod2 Heterozygote Mutant Mice at Various Ages

Oxidative stress has been implicated in aging and degenerative disease. Mitochondria are thought to be the main source of reactive oxygen species such as superoxide anion. Mitochondrial superoxide anion is normally detoxified by manganese superoxide dismutase (MnSOD, the Sod2 gene). However, when, free radical metabolism is perturbed, oxidative damage to protein, DNA, and lipids may occur. To demonstrate the effects of increased superoxide anion toxicity on mitochondrial physiology with age, the mitochondrial biology expression profiles of mice with a 50% reduction in MnSOD (Sod2 +/-) were determined at various ages. Samples were collected from young (5 months), middle-aged (10-14 months), and old (20-25 months) wild-type and Sod2 +/- mice. Samples were reverse transcribed and differentially labeled from the corresponding controls. The labeled mutant sample and the corresponding labeled control were hybridized with the mouse array of Example 2. Relative

to the control mice, the old Sod2 +/- mice showed induction of antioxidant and apoptosis genes including glutathione peroxidase 3, apoptosis inhibitory factor 3, caspase 1, and the peripheral benzodiazepine receptor.

Example 9

Profile of Sod2 Homozygote Mutant Mice

Manganese superoxide dismutase (MnSOD, the Sod2 gene) is a gene expression product involved in mitochondrial biology. Sod2 -/- animals die soon after birth due to the superoxide inactivation of mitochondrial iron-sulfur center enzymes resulting in dilated cardiomyopathy. The mitochondrial biology expression profile of Sod2 -/- mice is determined using the mouse MitoChip of Example 2. RNA samples are collected from Sod2 -/- mice and Sod2 +/+ mice. The Sod2 -/- sample is reverse transcribed and labeled with Cy3 phosphoramidite. The Sod2 +/+ sample is reverse transcribed and labeled with Cy5 phosphoramidite. The labeled samples are incubated with a mouse array under conditions of high stringency hybridization. The hybridization of both samples is measured with a microarray reader. The hybridization measurements are recorded.

Example 10

Profile of GPx1 Mutant Mice

Glutathione peroxidase 1 (GPx1) is an expressed sequence involved in mitochondrial biology. GPx1 -/- animals show mild growth inhibition and reduced OXPHOS efficiency. The mitochondrial biology expression profile of GPx1 -/- mice is determined using a mouse array of Example 2. RNA samples are collected from GPx1 -/- mice and GPx1 +/+ mice. The GPx1 -/- sample is reverse transcribed and labeled with Cy3 phosphoramidite. The GPx1 +/+ sample is reverse transcribed and labeled with Cy5 phosphoramidite. The labeled samples are incubated with a mouse array under conditions of high stringency hybridization. The hybridization of both samples is measured with a microarray reader. The hybridization measurements are recorded.

Example 11

Profile of Sod2 Heterozygote GPx1 Homozygote Doubly Mutant Mice

The mitochondrial biology expression profile of Sod2 +/- plus GPx1 -/- mice is determined using a mouse array of Example 2. RNA samples are collected from Sod2 +/- plus GPx1 -/- mice and Sod2 +/+ plus GPx1 +/+ mice. The Sod2 +/- plus GPx1 -/- sample is

reverse transcribed and labeled with Cy3 phosphoramidite. The Sod2 +/+ plus GPx1 +/+ sample is reverse transcribed and labeled with Cy5 phosphoramidite. The labeled samples are incubated with a mouse array under conditions of high stringency hybridization. The hybridization of both samples is measured with a microarray reader. The hybridization measurements are recorded.

Example 12

Profile of Mutant Mice Overexpressing Sod2 and/or GPx1

The mitochondrial biology expression profiles are determined using a mouse array, for mice overexpressing MnSOD and for mice overexpressing MnSOD plus GPx1.

Example 13

Profile of ρ^0 Mutant Cell Line

A mouse array of Example 2 was used to determine the mitochondrial biology expression profile of the mouse mutant cell line ρ^0 , the most extreme case of mitochondrial dysfunction. The LMEB4 (ρ^0) cell line was profiled against its parental LM(TK) - cell line. The mouse mutant cell line ρ^0 lacks mitochondrial DNA. To maintain the LMEB4 cell line in culture, it must be grown in media supplemented with glucose, pyruvate, and uridine (GUP media). A scatter plot of the gene expression ratios is shown in FIG. 3. Samples from the ρ^0 cell line and from the LM(TK) cell line were reverse transcribed and differentially labeled using a standard two-color fluorescent system, and hybridized to a mouse array of Example 2. Mouse array analysis confirmed that all mtDNA-encoded transcripts were absent from the LMEB4 cells, and that there was a reduction in nDNA OXPHOS gene expression, aconitase, and nuclear receptor binding factor 1 (NRBF1). There was an increase in expression of key glycolytic genes, mitochondrial ribosomal proteins, the LON protease, heat shock protein 84 (HSP 84), Bcl-X binding protein, and antioxidant protein 1. Invariably, the nuclear-encoded OXPHOS complex subunits were also down-regulated between 3 and 38-fold with a mean of 4.5 (the mean was calculated excluding the single outlying complex I subunit NADH-dehydrogenase *mwfe* which was down-regulated 38-fold). Mitochondrial transport proteins such as the Glutamate-malate transporter were down-regulated as was the mitochondrial protein import subunit gene Tim17 and several amino acid metabolism genes. By contrast, glycolytic genes such as pyruvate kinase, glucose phosphate isomerase and glucose-6-phosphate dehydrogenase were up-regulated 2 to 3-fold. Phosphofructokinase was up 1.6-fold. Anti-apoptotic genes such as apoptosis inhibitor 2 and 3 were up-regulated as was the

pro-apoptotic Bcl-Xs binding protein BNIP3 and Caspase 2. The other Bcl protein family members that are on the array were not changed significantly. The multi-function mitochondrial LON protease was up-regulated 2.1-fold.

Example 14

Profile of CAP^R Mutant Cell Line

A mouse array of Example 2 was used to determine the mitochondrial biology expression profile of the mouse mutant cell line harboring a mutation for chloramphenicol resistance (CAP^R), and the CAP^R 501-1 cell line having a mtDNA mutation in the 16S rRNA gene. The CAP^R mutation in chimeric mice causes cataracts, reduced photoreceptor response, vacuolization of the retinal pigment epithelium, and hamartomatous outgrowths of the optic nerve head. Mice inheriting the CAP^R mutation showed a marked increase in embryonic lethality, and those that were born died within two weeks with growth retardation, dilated cardiomyopathy, and mitochondrial abnormalities. CAP^R 501-1 was compared to the CAP^S LM(TK) - cell line. These two cell lines are both derived from mouse L929 cells. Samples from the CAP^R cell line and from wild-type cells were reverse transcribed and differentially labeled with a standard two-color fluorescent system, and hybridized to a mouse array of Example 2. The CAP^R cell line had up-regulation of all thirteen mtDNA transcripts, but down-regulation of multiple nDNA OXPHOS genes. The CAP^R 501-1 cell line versus the LM(TK)- gene expression scatter plot showed that all mtDNA transcripts were up-regulated 3.1 to 3.5-fold while the nuclear encoded OXPHOS subunits were down-regulated 2.1 to 5.3-fold. Procollagen type III and VI were also up-regulated 3.5 to 4-fold.

Example 15

Profile of Treatment to Cell Line

Mouse arrays of this invention were used to demonstrate how treatment changes, such as changing cell culture conditions, affect gene expression. The control cell line LM(TK) - grown in standard medium was profiled against a culture of LM(TK) - cells grown in media supplemented with glucose, pyruvate, and uridine (LM(TK) - (GUP)). Samples from the treated fibroblast cell line and from untreated fibroblast cells were reverse transcribed and differentially labeled with a standard two-color fluorescent system, and hybridized to a mouse array of Example 2. Treatment resulted in a down-regulation of the LON protease and HSP 84. The scatter plot of this experiment showed that other than the same core group of genes that were up-regulated in the NZB cell line mentioned in Example 17, few genes were

significantly different in their expression. The hybridization spots of three genes that showed the highest differences were HSP70, the LON protease, and E.T.F. The 70 kDa heat shock protein (HSP70) was down-regulated 3.4-fold. HSP70 has been shown to be a chaperone protein involved in mitochondrial protein import that forms an ATP-dependent motor with the inner mitochondrial membrane translocase and the polypeptide in transit (Voos, W. et al., "Mechanisms of protein translocation into mitochondria," [1999] *Biochimica et Biophysica Acta* 1422:235-54). The entire HSP70 control spot was of medium intensity, while the experimental spot was only medium intensity in the center. The LON protease was down-regulated 9.7 fold in LM(TK) - cells grown in GUP. The control LON protease spot was of medium high intensity over the entire spot and of low intensity in the experimental spot. The electron transfer flavoprotein (ETF), which shuttles electrons gathered during fatty acid metabolism to the electron transport chain, was down-regulated 3.8 fold. The E.T.F control spot was high intensity and the experimental spot very low intensity. Some of the nuclear encoded OXPHOS subunits as well as several proteins involved in amino acid metabolism were down-regulated 1.5 to 2-fold with mean ratio of 1.65. Since most of these genes fell below the +/- 1.7 ratio cutoff, further analysis was needed to determine if the expression pattern was significant. There were no differences in mtDNA transcript levels and no consistent pattern of up-regulation of glycolytic genes.

Example 16

Profile of Sod2 Mutant Mice After Treatment and Before Symptoms

Treatment of Sod2 mutant mice with MnTBAP prevents cardiac and liver pathology, however after 12 days the MnTBAP-treated mutant animals develop a prominent movement disorder which leads to debilitation by three weeks, in association with spongiform changes and gliosis in the cortex and specific brain stem nuclei associated with motor function. It is thought that the severe neuropathology results from poor exchange of MnTBAP across the blood brain barrier. The mitochondrial biology expression profile of MnTBAP-untreated, Sod2 mutant mice and MnTBAP-treated, Sod2 mutant mice was determined using the mouse array of Example 2. Samples were collected from 8 day old Sod2 mice without MnTBAP treatment, 8 day old Sod2 mice with MnTBAP treatment, and 12 day old Sod2 mice with MnTBAP treatment. Samples were also collected from age-matched controls. About 20 genes were found to be differentially expressed in all three groups of Sod2 knockout mice compared to the corresponding age-matched controls. The about 20 genes included bioenergetic genes such as the mitochondrial creatine phosphokinase, antioxidant enzymes

like the glutathione peroxidase 3, and apoptotic factors including caspase 1 and apoptosis inhibitor factor 3. The excitatory amino acid transporter 3, frataxin, and one EST of unknown function were also induced. Mitochondrial biology expression profiling demonstrated changes in expression before neuropathic changes were manifested.

Example 17

Organ-Specific Profiles of Mutant Mice

The NZB mouse line mtDNA and the "common haplotype" mtDNAs (129/Sv, C57Bl/6J, C3H, BALB/c, and others which are thought to have arisen as the progeny of a single female (Ferris et al., 1982) differ by 108 nucleotides, and these polymorphic differences have been used to monitor the segregation of heteroplasmic populations of mtDNAs in mice created by embryo fusion techniques (Jenuth, J. P. et al., "Random genetic drift in the female germline explains the rapid segregation of mammalian mitochondrial DNA," [1996] *Nat Genet* 14:146-51; Jenuth, J. P. et al., "Tissue-specific selection for different mtDNA genotypes in heteroplasmic mice," (1997) *Nat Genet* 16:93-5; Meirelles, F.V., and Smith, L.C., "Mitochondrial genotype segregation in a mouse heteroplasmic lineage produced by embryonic karyoplast transplantation," (1997) *Genetics* 145:445-51; Meirelles, F.V. and Smith, L.C., "Mitochondrial genotype segregation during preimplantation development in mouse heteroplasmic embryos," [1998] *Genetics* 148:877-83). Tissues from the NZB and CAP^R mice were profiled on a mouse array. Messenger RNA was isolated from the brain, liver, spleen, kidney, heart, and skeletal muscle of a male mouse heteroplasmic for the NZB mtDNA and a male mouse that was 80% chimeric for ES cell-derived CAP^R cells as defined by coat color. Due to the severity of the CAP^R mutation it was not possible to analyze the mitochondrial gene expression changes in mice that were homoplasmic for the CAP^R mtDNA. Control mRNA for each of the tissue samples was isolated from sex, age, and nuclear background-matched control mice. All of the tissue samples were genotyped to determine the levels of heteroplasmy for the NZB and CAP^R mtDNA in each of the tissues. Equal levels of the NZB and "common" mtDNA were found in the six tissues analyzed from the NZB mtDNA-positive mice. The six tissues from the CAP^R chimera had varying levels of CAP^R mtDNA with the kidney and spleen having the highest amounts, 65% and 50% CAP^R mtDNA, respectively. The heart contained approximately 20% CAP^R mtDNA, while brain, liver, and muscle all contained between 5% and 10% CAP^R mtDNA. Analysis of the NZB-mtDNA tissue samples did not reveal any differentially expressed genes in the heart, liver, brain, and kidney. A scatter plot from the NZB heart is shown in FIG 4. The scatter

plots from the liver, brain, and kidney are virtually identical in that nearly every gene has an expression ratio of 1. Analysis of the NZB-mtDNA spleen and muscle showed several genes that were differentially expressed in the two tissues. The NZB-mtDNA muscle showed a 1.5 to 2.1-fold reduction in all mtDNA transcripts, pyruvate dehydrogenase was down 2.2-fold, and there was a general trend for nuclear-encoded OXPHOS subunits to be down-regulated 1.4 to 1.8-fold. The vesicular transport protein, pantophysin, was down-regulated 4-fold and the glycogenolysis rate-limiting enzyme, glycogen phosphorylase, was down 3-fold. There were not any genes that were significantly up-regulated in the muscle. A similar pattern of mtDNA-encoded gene expression was observed in the NZB-mtDNA spleen with all transcripts down 1.8 to 2-fold. However, there were no differences in nuclear OXPHOS subunit expression levels like that observed in the NZB-mtDNA skeletal muscle. In contrast to the NZB-mtDNA muscle, several genes were up-regulated in the spleen. In direct opposition to the results in the NZB cell line, both probes of the heme biosynthesis gene coproporphyrinogen oxidase III detected up-regulation 3-fold in the spleen. The integral membrane protein SURF 4 was up 2-fold and the amino acid metabolism gene 2-amino-3-ketobutyrate CoA ligase was up 4.8-fold. Glycogen phosphorylase, down 3-fold in the muscle, was up 4.8 fold in the spleen. The muscle and spleen results suggest that the polymorphisms between the NZB and "common" mtDNA may have a functional consequence in some tissues but not others. Analysis of the CAP^R tissue samples did not show any genes to be differentially expressed in the kidney, heart, muscle, liver, or spleen. The kidney, having the highest percentage of mutant mtDNAs, had expression ratios around 1 for nearly every gene. The two outliers on the kidney scatter plot that appear to be down-regulated can be explained by hybridization artifacts causing a high background in the control sample. The CAP^R brain sample was the only tissue that had any differentially expressed genes. Skd 3 was up-regulated 2.2-fold, glutathione peroxidase was up 2.4-fold and apoptosis-inhibitor 3 was up 2.4-fold. Although no genes were down-regulated in the brain more than 1.8-fold, closer analysis of the brain samples did reveal a trend that was not observed in any of the other tissues. Several nuclear-encoded OXPHOS subunits were down-regulated between 1.3 and 1.6-fold. These included five Complex I subunits, three Complex IV subunits and five Complex V subunits as well as VDAC 1 and 3. None of the Complex II and III subunits or mtDNA transcripts followed this trend. Principal component analysis of NZB and CAP^R mouse tissues, separately and together with the cell lines, was performed.

Example 18

Identification of Genes for Mitochondrial Arrays

Mice mutant in mitochondrial biology were used to identify genes involved in mitochondrial biology. Mice deficient in the heart/muscle isoform of the adenine nucleotide translocator (ANT1) exhibit many hallmarks of human oxidative phosphorylation (OXPHOS) disease, including dramatic proliferation of skeletal mitochondria. Samples were collected from the gastrocnemius muscle of ANT1 and wild-type mice, reverse transcribed and differentially labeled, and hybridized with a mouse microarray chip (Mouse Unigene 1, Incyte Genomics Inc., Palo Alto, California) containing over 8000 sequence-verified cDNAs. Analysis of the hybridization results identified more than 150 differentially expressed genes. Gene sequences that were not previously recognized as being involved in mitochondrial biology were used to generate probes that were placed on the mouse array of Example 2. Homologous human gene sequences were used to generate probes that were placed on the human array of Example 1.

Example 19

Profile of Age-Related Changes in Chimpanzee Using Human Mitochondrial Array

Age-related changes in the mitochondrial biology expression profile in chimpanzees are determined using a human array of Example 1. Samples from young adult chimpanzee muscle and samples from most-mortem tissues of older chimps are reverse-transcribed, differentially labeled, and hybridized with a human array of Example 1.

Example 20

Profile of Putative Neutral Variant Mutant Mouse

The NZB cell line was profiled to examine the changes in mitochondrial gene expression resulting from a more neutral set of mtDNA polymorphisms. As mentioned previously, the NZB mtDNA contains 108 sequence differences compared to the "common" mouse mtDNA genotype found in LM(TK). While these differences were reported to be neutrally polymorphic (Jenuith et al., [1996] *Nature Genetics* 14:146-151; Meirelles and Smith [1997] *Genetics* 145:445-451), the only evidence to support that hypothesis is that transgenic mice containing a high percentage of NZB mitochondria have no overt phenotypes (Levy, S. E., "Genetic Alteration of the Mouse Mitochondrial Genome and Effects on Gene Expression," (2000) Ph.D. Thesis, Emory University; Jenuith et al. [1997] *Nature Genetics* 16:93-95; Meirelles and Smith [1998] *Genetics* 148:877-883). An NZB cybrid cell line was

profiled on a mouse mitochondrial array. The scatter plot of gene expression ratios between the NZB cell line and the parental LM(TK) - (without GUP supplementation) shows that both probes of the fatty acid metabolism gene Acyl-CoA dehydrogenase (medium-chain) detected up-regulation 3.6-fold. Procollagen III and VI were up-regulated 6.2 and 6.8-fold, respectively. Two independent probes of the coproporphyrinogen oxidase III gene that is involved in heme biosynthesis detected down regulation 2.6 and 2.3-fold. Also down-regulated was the peripheral-type benzodiazepine receptor. This receptor has been implicated in a variety of mitochondrial functions including the regulation of mitochondrial protein import under conditions of oxidative stress, calcium homeostasis, and steroidogenesis (Culty, M. et al., "In vitro studies on the role of the peripheral-type benzodiazepine receptor in steroidogenesis," [1999] *J. Steroid Biochemistry & Molecular Biology* 69:123-30; Wright, G., and Reichenbecher, V. "The effects of superoxide and the peripheral benzodiazepine receptor ligands on the mitochondrial processing of manganese-dependent superoxide dismutase," [1999] *Experimental Cell Research* 246:443-50). The glycolytic genes glyceraldehyde-3-phosphate dehydrogenase and glucose-6-phosphate isomerase were up-regulated 1.7 and 2.1-fold, respectively. Glycolytic genes were also up-regulated in the NZB cell line. This indicates that the sequence polymorphisms between the NZB and "common" mtDNAs are not entirely neutral and cause changes in mitochondrial function when combined with the LM(TK) - nucleus. Thus, the NZB mtDNA does not appear to be completely interchangeable with the "common" mtDNA genome. An interesting group of genes that were up-regulated in the NZB cell line were the pro-inflammatory genes Caspase 1 and platelet activating factor (PAF) acetylhydrolase, the mitochondrial RNA polymerase, and glutathione peroxidase 3.

Example 21

Hierarchical Clustering of Cell Lines

Principal component analysis (PCA) and hierarchical clustering were performed on the cell line data (Examples 13-15 and 20) to group genes based on similarities in their expression patterns over all the samples. PCA analysis was used to reduce the dimensionality of the data by calculating three principal axes that encompass as much of the variability in all of the samples as possible. Each of the samples was then plotted on those axes in three-dimensional space. The PCA results revealed that the NZB cell line clustered away from the other cell lines, consistent with it having fewer differentially expressed genes in common with the other samples. The LMEB4 p0, 501-1 and LM(TK) - (GUP) cell lines all arrayed

along one common principle axis, probably due to the commonality of a down-regulation of nuclear OXPHOS genes. However, they were divergent in the other two axes. The LM(TK) - (GUP) and NZB did share one axis, possibly due to a partial reduction in OXPHOS genes and a concomitant induction of glycolytic gene expression. However, both showed few differences when compared to the CAP R 501-1 and LMEB4 p0 samples. A hierarchical clustering algorithm was used to group genes with similar expression profiles across all of the samples. Both genes as well as samples were clustered together using a Euclidean distance measurement and average linkage. The clustering results revealed seven groups of genes with similar expression patterns in the cell line samples. Certain classes of genes were found to change together. Similar to the PCA analysis, the expression changes seen in the LM(TK) - (GUP) and NZB samples clustered closest together with the CAP R 501-1 and LMEB4 p0 samples branching successively further away. The Group 1 genes are involved in fatty acid metabolism. Group 2 genes, mainly down-regulated in the LM(TK) - (GUP) sample, include malate dehydrogenase, lactate dehydrogenase, glucose phosphate isomerase, and several amino acid metabolism genes. Group 3 genes are diverse clusters of genes that change in expression coordinately across the 5 samples. It includes some nuclear-encoded OXPHOS subunits, a few antioxidant and transport proteins as well as pyruvate kinase and a GTP-binding protein. Group 4 is a small, diverse cluster of genes mainly up-regulated in the CAP R 501-1 cell line. This group includes several of the same genes found to be up-regulated in the Ant1(-/-) mouse by differential display analysis (Murdock et al., 1999). Also in this group are two NADP-transhydrogenases, carbonate dehydratase and cytochrome b5 reductase. Group 5 is almost exclusively nuclear-encoded OXPHOS subunits. The voltage-dependent anion channel (VDAC) genes and several antioxidant proteins also cluster in this group. Group 6 is composed almost entirely of mtDNA-encoded transcripts. Group 7 is the heterogeneous group of genes that were up-regulated in each of the samples analyzed and included Caspase 1, PAF acetylhydrolase, the mitochondrial RNA polymerase, and glutathione peroxidase 3. Hierarchical clustering packages are available in the art, i.e. Expression Profiler (<http://ep.ebi.ac.uk/EP/> from the European Bioinformatics Institute, Cambridge, UK). PCA is described in Bioinformatics 2001, volume 17, number 9, pages 763-774.

The following examples describe the preparation of a mitochondrial biology expression array, sample preparation, hybridization, scanning, and data normalization.

Example 22

PCR Amplification

PCR amplifications were performed with standard PCR techniques. Probes were made by amplifying clones using a universal primer set (Forward primer 5'-CTGCAAGGCG ATTAAGTTGGGTAAC-3' Reverse primer 5'-GTGAGCGGATAACAATTTTCAC ACAGGAAACAGC-3') in a 100 µl PCR reaction containing PCR buffer (10 mM Tris, 1.5 mM MgCl₂, 50 mM KCl, pH8.3), 0.2 mM dNTPs, 0.2 mM each primer, 1.25 U Taq (Sigma, St Louis, MO). 0.5-1 µl of bacterial culture was added to each PCR reaction and thermal cycling was done as follows: 4 minutes at 94 C followed by 35 cycles of 15 seconds at 94 C, 30 seconds at 66 C and 1 minute 30 seconds at 72 C. Following cycling, reactions were held at 72 C for 4 minutes to complete all extension reactions. All PCR products were confirmed by agarose gel electrophoresis through a 1.5% gel. After satisfactory amplification, products were quantitated by UV 260/280 ratio and desiccated in a Savant Speed-Vac (Holbrook, NY). Dried products were then resuspended in 3xSSC (450 mM NaCl, 40 mM sodium citrate) at a concentration of 400-600 ng/µl for arraying.

Example 23

Slide Preparation

Before arraying probes, the glass microscope slides for the arrays were coated with poly-Lysine to provide a substrate for DNA binding. Standard glass microscope slides (Gold Seal, Beckton-Dickson, Franklin Lakes, NJ) were cleaned in a solution of 2.5 M NaOH, 60% ethanol for two hours. After cleaning, slides were rinsed five times in fresh water. The slides were then soaked in a solution of 0.01% poly-L-lysine, .1x PBS for 1 hour followed by rinsing in fresh water. After rinsing, the slides were dried in a vacuum oven at 45°C for 15 minutes.

Example 24

Printing

Arrays were printed onto poly-L-lysine coated glass slides using the GMS 417 Arrayer (Affymetrix/Genetic Microsystems, Woburn, MA). The arrays were printed using a 4-pin print head with a spot size of 150 µm (approximately 33 pL of volume per spot) and a center-to-center spot spacing of 375 µm. A humidity level of 65-70% was maintained during the printing of the arrays by a custom humidifier system. After printing, the arrays were

allowed to dry for 1 hour at room temperature. The arrays were then processed by rehydrating over a warm solution of 1x SSC for 5 minutes followed by rapid drying on a 95°C heat block. Following drying, the DNA was crosslinked to the slide by exposing the arrays to 65 mJ of ultraviolet energy (Stratalinker, Stratagene, La Jolla, CA). To block non-specific interactions on the arrays during hybridization, the slides were then treated with a solution of 60 mM succinic anhydride and 40 mM sodium borate in 1-methyl-2-pyrrolidinone for 15 minutes at room temperature. The arrays were then denatured in 95°C water for 2 minutes and dehydrated by rapid immersion in 95% ethanol. The arrays were then dried by centrifugation at 20xg for 5 minutes.

Example 25

Sample Preparation

Total RNA preparations were performed using the TRIzol reagent (Life Technologies, Gaithersburg, MD) as per the manufacture's directions. For cell culture samples, a 90% confluent 225ml flask was lysed directly in the flask with 18 ml of TRIzol. At least three flasks were pooled for each cell line to reduce any variability caused by culture conditions. For each mouse tissue, RNA was isolated from approximately 500 mg of tissue that was mechanically homogenized in 6ml of TRIzol. Following the isolation of total RNA, poly-A+ mRNA was isolated using Qiagen Oligotex (Valencia, CA) as per the manufacture's directions.

Example 26

Reverse Translation, Labeling, and Hybridization

To produce targets for hybridization to the MitoChip arrays, 2 µg of poly-A+ RNA was labeled with fluorescent nucleotides by reverse transcription. The poly-A+ RNA was mixed with 3 mg of anchored oligo-dT and incubated at 70°C for 10 minutes followed by 10 minutes on ice. The denatured and annealed RNA was then reverse transcribed in a 30 µl reaction mix containing reaction buffer (50 mM Tris-HCl, 75 mM KCl, 3 mM MgCl₂ pH 8.3), 10 mM dithio-threitol, 500 µM dATP, dGTP, dTTP, 300 µM dCTP, 20 U SuperScript reverse transcriptase (Life Technologies, Gaithersburg, MD) and 100 µM of either Cy5-dCTP (control samples) or Cy3-dCTP (experimental samples). The reactions were incubated at 42°C for 2 hours. Following incubation, 15 µl of 0.1M NaOH was added to degrade the remaining template RNA and the sample incubated at 70°C for 10 minutes. The reaction was neutralized by the addition of 15 µl of 0.1 M HCl followed by 440 µl of TE buffer (10 mM

Tris, 1 mM EDTA, pH 7.4). The synthesized cDNA was purified by size-exclusion filtration using Microcon YM-3 centrifugal filter devices (Millipore, Bedford, MA). After purification, 10 µg of poly-A RNA (Sigma, St Louis, MO) and 10 µg of yeast transfer RNA (tRNA) (Life Technologies, Gaithersburg, MD) was added. The final sample volume was adjusted to 12 µl and 525 mM NaCl, 52.5 mM sodium citrate, 0.25% SDS. The sample was denatured at 100°C for 2 minutes and added to the array. The sample and the array were hybridized under high stringency hybridization conditions. The sample and array were covered by a 22 mm x 22 mm coverslip and placed in a humidified hybridization chamber (Corning, Acton, MA) and incubated at 65°C for 12-16 hours. Following hybridization, the arrays were washed with successive 5-minute washes in 2xSSC, 0.1%SDS; 1xSSC; and 0.1xSSC. After the final wash, the arrays were dried by centrifugation at 20xg and scanned using the GMS 418 Array Scanner (Affymetrix/Genetic Microsystems, Woburn, MA).

Example 27

Array Scanning and Data Analyses

Scanned arrays were saved as 16-bit TIFF files and analyzed using Biodiscovery's Imagen software (Los Angeles, CA). Data mining and clustering analysis was performed using Biodiscovery's GeneSight software. Prior to data analysis, all cell culture samples were normalized using all spots on the array. All mouse tissue samples were normalized to the housekeeping genes on the mouse array. Local background was calculated for each individual spot and any spot with a signal intensity less than 3 times over background or that had poor morphology was excluded from the data analyses. Only differential expression values of greater than 1.7 were considered significant. All data mining and clustering analysis performed using GeneSight was on expression ratio data that was transformed by taking the natural log (ln) of all values and normalized by Z-score. The data is transformed because of the non-Gaussian distribution of the expression ratio values. Because the ratios are bounded on the lower limit by zero, a non-Gaussian distribution is normally observed. To allow for additional statistical manipulations, the data was transformed for a more uniform distribution. The Z-score normalization method involved subtracting the mean from every observation and dividing by its standard deviation, effectively normalizing each spot to all other spots on the array.

Example 28

Sample Hybridization to Mitochondrial Array

Control cDNA samples were prepared from mRNA isolated from the LM(TK) - cell line and labeled with the Cy5 dye. Each experimental mRNA sample was labeled with the Cy3 dye, combined with the Cy5 control sample and the mixture used to hybridize the array. A representative image of a hybridized array is shown in FIG 2. Any spot on an array that appeared red was due to hybridization of a large proportion of the Cy5-labeled control LM(TK) - sample and any sample that was green was due to the hybridization of a large proportion of the Cy3-labeled experimental sample. Any spot that is yellow is an about equal co-hybridization of the two targets. The fluorescence ratio was quantitated for each spot, permitting calculation of the relative abundance of each gene's mRNA in the two samples.

Example 29

Normalization

The two fluorescent dyes that were used to label the cDNA produced during the reverse transcription of the mRNA have different structures and different emission maxima. Therefore, the two images that represent the hybridization of each of the fluorescently labeled samples were normalized to each other to account for the differences in dye behavior prior to calculating the expression ratios between the two images. One image was normalized to the other by averaging all of the spots in each image to derive a constant that was then applied to each spot. Alternatively, a predetermined set of genes that were expressed equally in the two samples under all conditions could have been used. The expression ratios of these genes were used to calculate a constant that was then applied to all spots on the array. A set of 25 housekeeping genes in Table 2 was included on a mouse array for normalization and both of these methods were used in the analysis of the mouse cell line and tissue samples. Housekeeping gene expression in the cultured cells was much more variable than in the tissue samples. Because of the variability in the housekeeping gene expression patterns in the cell line samples, normalization was done using all of the spots on the array. The expression of the housekeeping genes was much more consistent in the tissue samples and normalization using either the housekeeping genes or the average of all of the genes gave similar results.

Example 30

Clones useful for making control probes for the arrays of this invention are listed in Table 6. Sequences of the genes useful for making the control probes are provided in the sequence listings hereof.

Table 6

SEQ ID NO.	Gene Name	Complete Gene Name	GenBank Accession No.
3041	Beta Actin	Human beta actin	X63432
3042	Plant control CAB	Arabidopsis photosystem I chlorophyll a/b binding protein	X56062
3043	Plant control rbcL	Arabidopsis ribulose-1,5-bisphosphate carboxylase/oxygenase large subunit	U91966
3044	Plant control RUBISCO	Arabidopsis RUBISCO activase	X14212

It will be appreciated by those of ordinary skill in the art that samples, sample collection techniques, sample preparation techniques, probes, probe generation techniques, genes involved in mitochondrial biology, hybridization techniques, array printing techniques, physiological conditions, cell lines, mutant strains, organisms, tissues, solid substrates, and methods of data analyses other than those specifically disclosed herein are available in the art and can be employed in the practice of this invention. All art-known functional equivalents are intended to be encompassed within the scope of this invention.

REFERENCE TO SEQUENCE LISTINGS

Tables 3-5 list sequence information on the clones that are useful for making probes for practicing the methods of this invention. Clone identification numbers are usually from NIA (National Institutes of Aging, National Institutes of Health, Bethesda, MD, USA), ResGen Invitrogen (Carlsband, CA, USA) or IMAGE Consortium, LLNL (Livermore, CA, USA). Gene names and descriptions are provided for the gene interrogated by a probe made from the corresponding clone. GenBank Accession Number and Unigene Cluster ID are provided where available. The functions of certain genes are included in Table 4. Sequences of the 5' and 3' ends of the clones listed in Tables 3-4 are provided when available. If no 5' or 3' sequence was available, gene sequence from the GenBank Accession No. provided for that clone is listed in some cases. The GenBank sequence may be larger than the sequence of the clone. The instant invention may be practiced without the sequence information provided

herein using the clones or GenBank listings. Other sequences derived from the genes interrogated by probes generated from clones listed in Tables 3-5 are useful for making equivalent probes using information known in the art, i.e., unique segments of such genes may be used.

The sequence listings that correspond to the clones listed in Table 3, covering human probes SEQ ID NOS:1-994, contain information including: the sequence identification number; a GenBank Accession No. corresponding to the listed sequence or the gene interrogated by the probe containing the listed sequence; another GenBank Accession No. in parentheses which is associated with the listed sequence in Table 3; a Research Genetics (ResGen Invitrogen, Carlsbad, CA, USA) Clone ID No. identifying the clone from which the sequence was derived; the name of the gene from which the clone was derived; a description of the gene; the Unigene Cluster ID No. of the gene; the IMAGE Clone ID No., which is often the same as the ResGen Clone ID No., and information in parentheses identifying the sequence as 5' or 3' of the clone; the length of the insert of the clone; the source of the clone; the type of clone, such as cDNA; and the nucleic acid sequence.

Sequence listings for control probes are provided as SEQ ID NOS:3041-3044.

The sequence listings that correspond to the clones listed in Table 4, covering mouse probes SEQ ID NOS:995-3040, contain information including: the sequence identification number; a GenBank Accession No. corresponding to the listed sequence; the 5' and/or 3' sequence of the corresponding clone, or the gene from which the corresponding clone was derived; the name and description of the gene from which the corresponding clone was derived; the Unigene Cluster ID No. of the gene from which the corresponding clone was derived; the name of the clone from which the instant sequence was derived; additional description of the gene; a set of titles usually including Clone Name, Rearray Sequence, Parent Sequence, Other EST, and Blast Link; a list of names including, in order of the above-mentioned titles, the name of the clone from which the sequence was derived, the name of the sequence with a suffix identifying it as the 5' (-5) or 3' (-3) sequence of the clone, the name of the parent sequence, and the name of another EST (expressed sequence tag), if it exists, which would be the other of the 3' or 5' sequence; the length of the sequence provided; and the nucleic acid sequence.

SEQ ID NOS:1-3044 are submitted herewith on a compact disk in file
"Sequence Listing.txt" which is incorporated herein by reference.

CLAIMS

We claim:

1. An array comprising at least two isolated nucleotide molecules, each molecule having a sequence capable of uniquely hybridizing to a nucleic acid molecule which is an expression product of a gene involved in mitochondrial biology.
2. An array comprising two or more isolated nucleic acid molecules or spots, each spot comprising a plurality of isolated nucleic acid molecules, each molecule having a sequence consisting essentially of a sequence selected from the group consisting of the sequences of human probe set #1, SEQ ID NOS: 1 to 994, or mouse probe set #2, SEQ ID NOS: 995 to 3040, and sequences having at least 70% homology to the foregoing sequences.
3. The array of claim 2 printed on a glass slide.
4. The array of claim 2 comprising more than about ten spots.
5. The array of claim 2 comprising more than about twenty-five spots.
6. The array of claim 2 comprising all of the isolated nucleic acid molecules having the sequences of human probe set #1, SEQ ID NOS: 1 to 994.
7. The array of claim 2 comprising all of the isolated nucleic acid molecules having the sequences of mouse probe set #2, SEQ ID NOS: 995 to 3040.
8. The array of claim 2 also comprising one or more spots comprising control nucleic acid molecules, SEQ ID NOS:3041-3044.
9. A method for determining an expression profile of a sample containing nucleic acid comprising:
 - a) providing the sample;
 - b) providing an array of claim 2;
 - c) contacting said array with said sample under conditions allowing selective hybridization; and

- d) measuring hybridization of nucleic acid in said sample to said array to produce an expression profile.
10. The method of claim 9 wherein said sample is from a mouse or a human.
11. A method for determining an expression profile of a first labeled sample containing nucleic acid relative to a second, differently labeled sample containing nucleic acid comprising:
- a) providing the first labeled sample;
 - b) providing the second, differently labeled sample;
 - c) providing an array of claim 2;
 - d) contacting the array with the first sample and the second sample under conditions allowing selective hybridization;
 - e) measuring hybridization of said first and said second samples to said array; and
 - f) comparing the hybridization of said first sample to the hybridization of said second sample to produce an expression profile.
12. The method of claim 11 wherein said second sample is a reference or a standard.
13. A method for determining an expression profile diagnostic of an energy-metabolism-related physiological condition comprising:
- a) providing a labeled first sample from a first group of one or more individuals with said physiological condition;
 - b) providing a differently labeled second sample from a second group of one or more individuals without said physiological condition;
 - c) providing an array of claim 2;
 - d) contacting the array with the first sample and the said second sample under conditions allowing selective hybridization;
 - e) measuring hybridization of said first and said second samples to said array; and
 - f) comparing the hybridization of said first sample to the hybridization of said second sample to produce an expression profile diagnostic of said physiological condition.

14. A method of making an array comprising:
 - a) providing a prepared substrate; and
 - b) printing two or more spots in known positions on said substrate, each spot comprising a plurality of isolated nucleic acid molecules, each molecule having a sequence consisting essentially of a sequence selected from the group consisting of human probe set #1, SEQ ID NOS: 1 to 994, mouse probe set #2, SEQ ID NOS: 995 to 3040, and sequences having at least 70% homology to the foregoing sequences.
15. The method of claim 14 wherein said array comprises all of said isolated nucleic acid molecules in human probe set #1, SEQ ID NOS: 1 to 994.
16. The method of claim 14 wherein said array comprises all of said isolated nucleic acid molecules in mouse probe set #2, SEQ ID NOS: 995 to 3040.
17. A method of diagnosing a first individual with Complex IV Leigh's Syndrome comprising detecting in a first sample from said first individual at least about a 1.7-fold decrease in the amount of expression of genes comprising ND4, ND1, ND6, SURF-1, SOD2, 70kD heat shock protein, VDAC4, ANT2, and glutathione peroxidase 3 compared to the amount of expression of said genes in a second sample from a second individual without Complex IV Leigh's Syndrome.
18. A library of at least two isolated nucleic acid molecules, each molecule having a sequence consisting essentially of a sequence selected from the group consisting of human probe set #1, SEQ ID NOS: 1 to 994, mouse probe set #2, SEQ ID NOS: 995 to 3040, and sequences having at least 70% homology to the foregoing sequences.
19. An array comprising at least two spots, each spot comprising a plurality of isolated nucleic acid molecules, each molecule comprising a sequence with at least 70% homology to a sequence selected from the group consisting of human probe set #1, SEQ ID NOS: 1 to 994.

20. An array comprising at least two spots, each spot comprising a plurality of isolated nucleic acid molecules, each molecule comprising a sequence with at least 70% homology to a sequence selected from the group consisting of mouse probe set #2, SEQ ID NOS: 995 to 3040.
